Mesterolone (Proviron) is dosed at 25 mg per tablet. This is not an anabolic but a very powerful anti-estrogen. Prevents gynecomastia, while decreasing the retention of water and fat, it allows the revival of testosterone production in testes, while preventing the aromatization of anabolic. Proviron acts as an anti-aromatic: it prevents the aromatization (transformation) of anabolic steroids. The usual dosage among male athletes is between 50 mg and 150 mg of mesterolone per day, or two to six 25 mg tablets. The drug is typically taken in cycles of 6-12 weeks in length, which is usually a sufficient period of time to notice the benefits of drug therapy.

Product Description. PROVIRON 25mg x 50 tablets. Mesterolone. Excellent compound to use especially in conjunction with Anavar. Will elevate mood, increase libido and general sense of well being. Proviron has mild anti estrogen properties which can help combat elevated estrogen on cycle (which can cause breast tissue). Description : Proviron is the brand name for the orally applicable androgen and DHT (dihydrotestosterone) derivative called Mesterolone. Roughly 5% of testosterone undergoes 5-alpha reduction to form the potent androgen DHT, which is a sex hormone and androgen hormone. DHT plays a major role in the formation of the male genitals, and, in adults. [have a peek at this site](#)

Provibol comprises Mesterolone dosed (25 mg per tablet in UK). He has not an anabolic but a powerful anti-estrogenic properties. It prevents the occurrence of gynecomastia; reducing the accumulation of water and fat allows you to restore testosterone production in the testes; prevents aromatization of anabolic steroids Mesterolone (Proviron) from Maha Pharma is dosed at 25 mg per tablet. It is not an anabolic but a very powerful anti-estrogen. Prevents gynecomastia, while decreasing the retention of water and fat, it allows the revival of the production of testosterone in testicles, while preventing the aromatization of anabolic. Proviron acts as an anti-aromatic: it prevents the aromatization.

Shipped from UK. Proviron 25mg \$ 70.00. so, in order to treat androgen insufficiency condition, Mesterolone is commonly being prescribed in a dose of 1 tablet (25 mg) 3 times a day (which means a total dose per day of 75 mg) at the initiation of the therapy. However, then later the drug is being continued at a lower maintenance dose, which.

Clinical author's note Michael Stewart 21/11/2019: Pro-Viron® tablets were discontinued in the UK in September 2018. At the time of review there are no branded or generic products containing mesterolone available in the UK. Mesterolone may still be available in other countries. [go right here](#)
