To Whom It May Concern:

Freer Tool and Die started doing work for us several months ago, and we are extremely satisfied with everything they have done. Freer has made all the details for several dies including ball retainers, punches, die steels, strippers and windows. Freers CAD-CAM capability has been a pleasant surprise. Several times we have supplied limited information, and Freer has redrawn and programed these items and supplied us with an excellent product. I've found Freers prices very competetive and recommend them for your future needs.
