

HOW TO USE OUR BEER SYRINGE

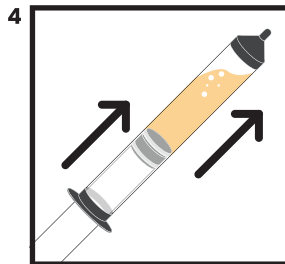

1 Lightly dip the two white gaskets (**C1, C2**) in cooking oil and place them into the grooves of the seal (**C**). The gaskets will allow the plunger to glide smoothly and reduce leaking.

2 Slide the barrel flange (**B**) onto the plunger. Insert the plunger into the barrel. Slide flange down (**B**) and attach to the barrel. Do not push the plunger to the end of the barrel in order to leave beverage space.

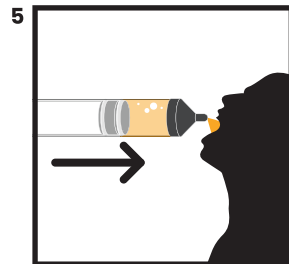

3 Remove the mouthpiece (**A**) and fill with beverage of choice.

4 Put the mouthpiece (**A**) back on and push the plunger through the barrel to release any excess air.

Note: Cover the mouthpiece to prevent spillage.

5 Continue pushing the plunger to release your beverage (as if you are pushing on an actual syringe.)

HOW TO CLEAN OUR BEER SYRINGE

Detach mouthpiece (**A**) and plunger flange (**D**) then push the plunger to the end of the barrel to release it. Place all the pieces in dishwasher. Dishwasher-safe.
