ATLAS BATTERY KIT USER GUIDE

SET UP:

- Take off the mouthpiece, exposing the coil.
- Separate desired amount of concentrate and apply it on the coils.
- Reapply the mouthpiece.

OPERATION:

- Press the button five times to turn the Atlas on or off.
- Press the button and hold it down while gently drawing on the mouthpiece.
- For cartridges, simply attach cartridge, press the button and hold it down while gently drawing on the cartridge mouthpiece.

CHARGING:

- When the Atlas needs to be charged the light will blink three times and no vapor will be produced.
- To charge your battery, remove the atomizer or cartridge and attach to the included 510 threaded USB charger.
- The light on the charger will turn on:
RED - Indicates the unit is charging
GREEN - Indicates the unit is fully charged.

CLEANING:

- The connection point on your Atlas battery can accumulate oil residue over time.
- Clean off battery and cartridge connection points periodically with a swab soaked in isopropyl alcohol, as residue may have accumulated.

TIPS:

- Be careful not to overfill - a dab the size of a grain or two of rice will do.
- Replace atomizer every 1-2 months, depending on use.
- The Atlas light will blink after 12 seconds and the battery will deactivate to prevent overheating.
- If your cartridge isn't producing any vapor, you can try turning the cartridge 1/4 turn counterclockwise and the battery will be able to make a connection and work again.
- The viscosity of oil will change with changes in temperature. Try not to leave your battery in your car on warm days. On cold days, it might take some time priming the battery (activating it with short suction bursts) to get vapor production.

WARNING:

- Only use Vuber wax atomizers and attachments. Using modified or homemade atomizers can be dangerous. Vuber is not responsible for damage caused by improper use.
