

The PILOT battery has three variable voltage settings that allow you to pair your preferred voltage with your favorite cartridges, no matter the viscosity. The PILOT also features a pre-heat setting that allows you to get larger clouds and loosen up thick oil. Have a cold cartridge that isn't wanting to fire? Just initiate the pre-heat setting and then press the button and let the PILOT take off even on cold winter days.

LIMITED LIFETIME WARRANTY

Vuber Technologies is proud to offer a limited lifetime warranty on all Vuber devices. To qualify for a warranty claim, register your product within 30 days of purchase. To register or submit a warranty claim, please visit our website.

GO TO:
Vubervaporizers.com

- Approved warranty claims are typically processed within 3-5 business days.
- A shipping and handling fee applies to each item replaced.
- Cartridges, atomizers, and heating coils will need to be replaced over time and are not covered under warranty.
- Please retain your receipt to qualify for warranty replacement.
- Instruction videos are available under each product page, on the Vuber website.
- Damage caused by improper use, physical abuse, moisture exposure, or any activity other than vaping – will not be covered under warranty.

VUBER
PILOT BATTERY USER GUIDE

OPERATION:

STEP 1 - Attach your favorite pre-filled cartridge.

STEP 2 - Click the button FIVE times to turn the unit ON/OFF

STEP 3 - Choose your preferred setting by pressing the button three times to cycle through voltages:

- GREEN - 2.8v - Less Vapor, More Flavor
- BLUE - 3.4v - More Vapor, Less Flavor
- RED - 3.8v - Best for Wax Atomizers

STEP 4 - Press the button, hold it down, and gently inhale on the mouthpiece.

STEP 5 - Exhale and enjoy!

PRE-HEAT SETTING:

- For thick oil or on cold days, turn the PILOT on by pressing the button FIVE times, then press the button TWO times to start the pre-heat setting. This setting heats the oil at a low temperature and will loosen up thick oils.
- When the pre-heat cycle initiates the LED light behind the button will cycle through all three colors.
- You can end the pre-heat cycle at any point by holding the button down. The unit will then fire at the current temperature setting.

CHARGING:

- To charge your battery, attach the unit to the USB-C charger included in your kit.
- The PILOT button will light up as it is charging.
- When the light is no longer on, the unit is fully charged. The light will blink green twice
- The light will blink red three times and no vapor will be produced when the unit needs charging.

INDICATOR LIGHTS:

- LOW BATTERY - The light will blink three times in red. This indicates the PILOT needs to be charged.
- Heating Element Issue - The LED light will flash 3 times in purple, pink, or white. Try turning the cart back half a turn. If the problem persists contact Vuber.

CLEANING & CARE:

- The connection point on your PILOT battery can accumulate oil residue over time.
- Clean off the PILOT and cartridge connection points periodically with a cotton swab soaked in isopropyl alcohol, as residue may have accumulated.
- Gently wipe the swab on the battery and connection point.
- Do not leave the battery in excessive heat and cold environments. This may degrade battery life.

TIPS & TRICKS:

- Not all oil is made the same - a heat setting that gives the best flavor profile for one brand may not be the best choice for another.
- The viscosity (thickness) of oil will change with changes in temperature. Try not to leave your cartridge in your car on warm days and understand that on cold days it might take some time priming the battery (activating it with short suction bursts) to get vapor production.
- Before removing cartridge, fire battery for 3 seconds to loosen up any oil residue that may have leaked out of the cartridge bottom. If oil has leaked it can cause damage to the connection points when unscrewing your cartridge.
- If your battery is blinking pink, purple, or white try turning the cartridge back half a turn.

WARNING:

Using modified or homemade atomizers can be dangerous. Vuber is not responsible for damage caused by improper use.

MUST BE 21 or OLDER TO USE THIS PRODUCT.
