Name: _____

Class: _____

Module 6: Congestion Pricing and Flowcharting
Lesson 1: Congestion Pricing
Symbols in Flowcharting Worksheet
Grade Level: 6 - 8

Name	Symbol	Use/Indication
Terminator		Used to show the <u>starting and stopping point</u> of the process.
Process		Displays an action (or operation). This can also be used for calculation, defining a variable, or updating a variable.
Decision		Indicates a point in the process where a <u>choice/decision has to be made</u>. This choice/decision is usually Yes/No or True/False. Text inside the symbol describes the choice, and then arrows flowing out of the sides are labeled based on the outcome. (Usually these arrows extend out from the right and bottom).
Data		Indicates any type of data input/output to and from a process. Example: get X from the user, or print Y.
Connector		Connectors are used to <u>join two or more lines</u>. Also known as a node or connecting node. Standard practice is that two more arrows flow in, and only one flows out from the connector.
