

DUAL ACTION MULTI-PURPOSE IMPACT SOCKETS – PERFECT FOR MECHANICS

Dual Action thin-walled socket products – have the dual benefit of working with an impact power tool and a hand tool.

Dual Action sockets were the first of their kind to be available in Australia. They are designed for the strength an impact tool demands and engineered for the precision a hand tool provides. Trusted by mechanics all over Australia, Dual Action gives you versatility in a single socket set, saving you time, money, and tool kit space.

MADE TOUGH

Perfect for mechanics, Dual Action impact sockets are made of chrome-molybdenum alloy steel, the perfect material to meet the extreme requirements that professional users require from their tools. A drop forge process is used to form the Impact Sockets, followed by precise heat and surface hardening treatments to deliver unsurpassed material strength, hardness and superior surface durability.

THE RANGE

Available individually and in sets, Dual Action sockets are a stand-alone product range, which users find particularly appealing as it enables them to replace two sockets with

one. The range is highly comprehensive in both sockets and sets with 1/4" 3/8" and 1/2" drives in Metric, Imperial, standard and deep variants. All sets are available in 6 or 12 point.

Dual Action sets include not just a range of strong impact sockets, but also a ratchet with a quick release button, that is low profile to allow greater access to confined areas. The 3/8" and 1/2" sets also include a wobble extension which provides 15 degrees of deflection and can also be locked straight for normal use.

NEW WEBSITE

To find out more about these high-quality impact sockets, Dual Action has recently launched its new website which is a hub of useful information. There's a video that provides you with a close-up look of the thin-walled design of the Dual Action

sockets and a complete catalogue of the entire range. There is also a national store locator, to help find your nearest stockist where you can obtain expert advice to find the right impact sockets to suit you.

On the website you can also find all of the various socket sizes either individually or in sets. Each product has a unique page that provides the product's specifications in both standard and deep configurations. You can also find a list of accessories that help you to get the most out of your Dual Action sockets.

ONE SET ONCE

The Dual Action range of impact sockets are the only sockets you should use on the equipment you value. Now there's no need to buy one socket set for your power tool and another one for your hand tool, you can just invest in one set once.

Specifically engineered for the needs of the professional technician, Dual Action's thin-walled sockets and accessories provide unparalleled versatility that come with a lifetime warranty. So, when you're ready to get serious about your tools, the best action you can take is Dual Action.
