# Mr12Volt CarPlay interface for NTG3.5 Quick User Guide

Model No: P2000-NTG35MM

W221 S-class 2009 - 2012 (facelift)

- 1 All you need to know before Installation
- 2 Product Features
- **3 Main Feature Operations**
- 4 Car Settings
- **5 Sound Settings**
- 6 USB Supported Formats & Other Specs

### 1 - All you need to know before Installation

• Mr12volt is selected through TV features of Mercedes NTG3.5

• No coding Tools or Factory TV module is needed, once Mr12volt CarPlay module is installed successfully (pressing both "DISC/RADIO" and "RETURN" buttons will activate the "TV" option in menu

• Dip Switch Configuration

Merceds-Benz	1	2	3	4	5
NTG 3.5	OFF	OFF	OFF	OFF	OFF

### 2 - Product Features

🏠 Main						0 🛛 🖇 🤸
Music	CarPlay	Android Auto	Mirroring	Bluetooth	Video	Settings

- Music & Video Playback (Through USB Flash)
- CarPlay
- Android Auto
- Mirroring
- Bluetooth HF & Music Streaming
- Reverse Camera Input ( Support up to AHD720P )
- Front Camera Input
- Passenger Side L/R Camera Input (For the use of Blind Spot)
- Reverse Grid Line
- Digital Sound Processor (DSP) with 15 Band Equalizer Adjustment
- Software Update available

### 3 - Main Feature Operations

## CarPlay/Android Auto

- Support both wired and wireless CarPlay
- To connect to CarPlay wirelessly, both Bluetooth and Wi-Fi connection are required
- For wired CarPlay & Android Auto : Use a genuine cable to connect through the USB/Lightening connector. Wi-Fi & Bluetooth connections are NOT required in a wired connection.
- How to connect CarPlay : Search for Mr12volt\_xxxx and pair to make a Bluetooth connection ---> Turn on Wi-Fi and & use CarPlay ---> it will start CarPlay on your screen after few seconds, it could take up to a minute for a first time connection.
- How to connect Android Auto : Search for MR12volt\_xxx and pair to make a Bluetooth connection, Wi-Fi on phone will be on automatically connected to Android Auto

### Mirroring

### iPhone

1. Disable CarPlay by turning off Bluetooth & Wi-Fi Connection on your

phone

2. Enter Mirroring menu on car display and choose iPhone

3. Turn on Wi-Fi on phone, connect to "carplay\_xxxx" (PW is 888888888)

4. Go to Apple quick menu bar, select Screen Mirroring and select Mirroring again

5. Phone display will appear on Car Display now

#### **Android Phone**

 It is necessary to install "MLink" application on your Android phone, it can be downloaded on <u>www.mr12volt.com</u> (Go to SUPPORT ---> Download ---> P2000 mirroring)

- Both Bluetooth & Hotspot connection are needed at all time for mirroring
- ♦ Hotspot Setting :
- 1. 5GHz band must be selected
- 2. Enter Mirroring menu on car display and choose "Android"
- Network name & Password on phone must be set same as shown on Mr12volt "Mirroring" menu
- 4. Open M-LInk app-->turn on Bluetooth and Hotspot
- 5. When both Bluetooth and Hotspot are successfully connected, Phone display will appear on Car Display
- It is always best to open mirroring menu on car display prior to the connection of Bluetooth, so that Android Auto does not overtake the function of mirroring when first connected to Bluetooth

## Bluetooth

- Phone contact list
- Contact history
- Dial Pad
- Audio Streaming

#### **BT Hands-free**

- When a call is incoming, answer and reject button will appear on display, use MMI/i-Drive/Rotary button to select.
- Mercedes-Benz luetooth HF and Mr12volt Bluetooth can be connected at the same time. (see below picture) When both are connected and a call is received Merced es-Benz HF will take over Mr12volt HF and it can be answered through phone button on steering wheel.

#### 4 - Car Settings

# Car Setting

#### "Reverse Camera" settings

- OE Camera (Default) Select this when car is fitted with factory camera
- AfterMarket 360 Select this when car is installed with a aftermarket camera (support up to AHD720 only)

<b>A</b> Settings		<b>⊲»</b> 🖰 🗍 🐇	€
General	Reverse camera	OE Camera	$\nabla$
Car Setting		Gear Position	$\bigtriangledown$
Display	After loading Track	IS	$\nabla$
Sound	OE Camera	off	$\nabla$
Language	AfterMarket 360 Reverse track	On	$\nabla$
System	Reverse radar Car	on	$\nabla$

#### "Reverse condition" settings

- Gear Position (Default) Detects through CAN bus when car is in reverse.
- Reverse State Detects through 12v reverse light signal when reverse (requires the manual wiring connection of a car reverse signal)

<b>A</b> Settings		d)	8 🛛 🖇	t
General	Reverse Reverse condition	OE Car	hera	$\nabla$
Car Setting	Parking Key		sition	$\nabla$
Display	Starting fr Reverse State			$\nabla$
Sound	Dedicated Gear Position		f	$\nabla$
Language			1	$\nabla$
System	Reverse radar Ca	n <b>cel</b> Or	1	$\nabla$

#### When do i select "Reverse State" ?

Mr12volt detects Car CAN bus with most of the car models in the market, however in some cases particularly in older generation cars, when CAN bus can't be detected,

it is necessary to manually detect camera through car reverse light signal.

(Refer to the Mercedes Benz NTG 3.5 Installation Diagram for more details)

"Starting front view" - Front Camera timer setting with 5s, 10s, 30s

Settings	4	) 🔆	K
