

a new way to compost

Designed and manufactured in New Zealand, hungry bin is a fast and convenient way to compost your food scraps. The innovative design is highly efficient and can process up to 2.0 kilos of waste per day. The hungry bin creates an ideal living environment for compost worms. The worms quickly convert organic waste into castings and a nutrient-rich liquid, which are both high-quality natural fertilisers. It is a simple process to collect both the castings and liquid produced by the hungry bin. Hungry bin has wheels, so if you need to move it, you can. Hungry bin is not just clean, simple and easy to use – it looks great too. If you want to reduce your rubbish and can use some high quality fertiliser, hungry bin is the perfect solution.
