How to get your TikTok profile URL

To get your TikTok profile URL, you first need to navigate to "Share profile".

Then, tap on "Copy link" to copy your profile's link and share it with others.

Alternatively, you can just share your TikTok link **by manually typing it out.**

If you're using TikTok on a desktop, you simply sign in to your account, visit your profile, and copy its link on the URL field.

Your link is **tiktok.com/@username**, with @username being your TikTok username.

Make sure to include an "@" sign in front of your username.
