MORELLI
GROUP

The Fast Mover Rotating Universal Panel Stand is simple to use and very flexible, with the ability to hold doors, tailgates, bonnets and wings from any production car.

To use, simply mount the panel onto the stand using the 4 hooks. From here, you have the option and freedom to rotate the panel through 180 degrees.

The advantage of the 180-degree rotation is that you can then paint the panel all around without having to touch it - instead, you just need to adjust the stand and paint the panel at the best angle possible for you.

With provided 200mm rubber wheels, this allows you to operate over the spray booth grids and workshop floor with significant ease, even with a panel in tow.

Panel Stand Size: 850mm x 650mm x 70mm

The Fast Mover Universal Panel stand works well in conjunction with the Fast Mover trim & spoiler holding kit (FMT1234) and the bumper hanging attachment Kit (FMT1650K), both available to purchase from us.

This panel stand is provided with two extension arms (right) to accommodate for larger panels if necessary.
