Anadrol (oxymetholone), is a DHT-derived oral anabolic steroid. In bodybuilding, anadrol is considered the most powerful oral steroid on the market. Anadrol, also known as A-bombs or Oxy's, is predominantly used by bodybuilders in the off-season (when bulking); significantly increasing muscular size and strength.

In the beginning, men can take 50 mg per day. And then you can increase them gradually. Anadrol for men doses depends on whether they are beginner, intermediate, or advanced level users. Here are the complete dose details for all the users that you should follow. General dosage and cycle of Anadrol: 50 mg to 150 mg per day for 4 to 6 weeks.

The androgen-anabolic steroid Oxymetholone, known in the world of sports as Anadrol, is currently enjoying unprecedented popularity. This steroid is extremely well known by all those in the bodybuilding and fitness industry. The original goal of scientists in the invention of this steroid was the

treatment of various pathologies.

Anadrol Dosage and

Administration The recommended daily dose in children and adults is 1-5 mg/kg of body weight per day. The usual effective dose is 1-2 mg/kg/day but higher doses may be required, and the dose should be individualized. Response is not often immediate, and a minimum trial of three to six months should be given. A Good Starting Anadrol Dosage is 25mg Considering that Anadrol side effects can be rather harsh, you should definitely start at the lower end with your dosage. 25mg per day is good for your first two weeks of using drol; from here you can progress to 40-50mg a day if you handle the side effects well.
