In order to get the best effect, CJC-1295 with DAC can be combined with other peptides GHRP group, e.g., hexarelin, etc. Ipamorelin is the best choice. How to use CJC 1295 DAC The recommended place to start is by using 2 mg per vial diluted with 2ml water for injection.

danielvp said: Think about also adding mk-677 to hex and cjc no dac. I've been experimenting with different peptide combinations this month, adding mk-677 to peptides makes a huge difference. Click to expand. Yeah, it can make off time more fun, and put a few solid lean lbs on you.

Hexarelin, which is a potent stimulator of the growth hormone secretagogue receptor. When combined with CJC-1295, a growth hormone releasing hormone receptor agonist, the two GH stimulants boost both baseline and peak levels of GH in animal models.. Both peptides have positive effects on cardiac (heart) muscle. Hexarelin, in particular, has been heavily investigated for its ability to protect. CJC-1295 with DAC and Hexarelin Log. I started this the other week and figured I would post here so you guys can see my journey. Some may say you're a rep though and I understand but I am always 100% honest and anyone who knows me realizes this as a few of my logs haven't turned out great. I want to transform so gonna be 100% from now on.

Mod GRF 1-29 (CJC-1295 without DAC) is commonly combined with a Ghrelin mimetic (also known as a GHRP - Growth Hormone Releasing Hexapeptide), such as GHRP-6, GHRP-2, Hexarelin, or Ipamorelin in order to initiate and amplify a greater pulse of HGH from the pituitary compared to Mod GRF 1-29 used solitarily on its own.
