Modern clinic in EU, Lithuania, 5-year follow up with UK dietitian, all-inclusive price. Free consultations. Join our closed group of more than 2.000 bariatric patients from UK. Proviron (mesterolone) is an interesting anabolic steroid, though it is not of much value to bodybuilding. It seems that the most common reason for many to consider including it in a steroid stack is for anti-estrogenic activity.

Proviron has a strong affinity to bind to androgen receptors. Moreover, it's a DHT-derived anabolic steroid. This provides a definite, visible boost to lipolysis. You will lose fat, particularly near the waist.

Fat loss Proviron steroid, just like other DHT derivative, plays a vital role in body fat loss. It promotes the breakdown of fat deposits stored in the body into energy used in the day to day activities. In return, the lipid level in the body is reduced. [this website](#)

Proviron is the trade / brand name for the androgen known as Mesterolone. It is an oral product, and is not considered an anabolic steroid. This is because its anabolic activity is known for being extremely weak - so weak, in fact, that it can be practically considered nonexistent. Proviron was initially developed by Schering in 1934, making.

Proviron (Mesterolone) Proviron is the brand name for the orally applicable androgen and DHT (dihydrotestosterone) derivative called Mesterolone. Roughly 5% of testosterone undergoes 5-alpha reduction to form the potent androgen DHT, which is a sex hormone and androgen hormone. DHT plays a major role in the formation of the male genitals, and.

Proviron in its oral format is easy for doses and can give you a huge boost when it comes to leaning yourself out and causing fat loss. Many athletes tend to stack Proviron alongside other bulking testosterone or steroid so that they can experience rapid growth of lean muscle. Proviron is excellent for dieting reasons and for adjusting fat cells. The Mesterolone hormone has the ability to greatly affect HDL and LDL cholesterol. Studies have shown that this steroid has the ability to reduce HDL cholesterol (good cholesterol) by more than 30% and increase LDL cholesterol (bad cholesterol) by more than 60%.

Proviron, the brand name for mesterolone, is a synthetic type of male sex hormone. Mesterolone, chemically known as 1-methyl-5 $\alpha$ -dihydrotestosterone (DHT), is methylated (the addition of a methyl group -CH<sub>3</sub>) making it an active steroid very similar to natural DHT that does not convert into estrogen or progesterone (both female hormones) once in the body.
