Primobolan does not give fast gains, or more accurately, does not cause a quick increase in water retention, therefore it's considered "weak", yet in terms of building solid muscle, it's one of the most effective steroids available. #3 - Primobolan builds quality, lean muscle Primobolan is not a steroid that will make you insanely big in a span of weeks. Instead, you will make small but steady gains which will be quality muscle with very little water retention. A dry, defined look.

Primobolan is best used in cutting cycles because of its excellent ability to help you retain your existing muscle. By conserving lean muscle while you're burning fat, Primobolan acts as an anabolic agent while you're cutting. It encourages the body to only burn fat while protecting muscle from being burned as energy.

Primobolan is the perfect middle ground. It keeps your muscles full. But it removes the water-filled look to a great extent. There is a minimal amount of drying that adds to the aesthetics. [click for more info](#)

Those that want lean and slow gains will be very pleased with the quality muscle mass they put on with primo. Bottom line is primobolan is perfect for those who want consistent returns, much like investing in a high dividend utility stock vs. investing into a boom or bust biotech or tech stock. Muscle mass gain - With methenolone you will not see a drastic increase in mass as with testosterone, dianabol or other "wet steroids". Primo increases weight gradually, but gained weight is of much better quality and remains practically 100% after the cycle.

Sensitive individuals need not worry about developing gynecomastia, nor should they notice any water retention with this drug. The gains seen with Primobolan will be only quality muscle mass, and not the smooth bloat which accompanies most steroids open to aromatization. Methenolone itself is a moderately strong anabolic steroid with very low androgenic properties. Primobolan is considered one of the safest anabolic agents, producing quality gains in muscle size and appearance, without side effects. DOSAGE. Beginners: 200 - 300 mg / week Hobby: 300 - 600 mg / week Professionals: 400 - 1000 mg / week

Primobolan is used to treat muscle wasting diseases in some cases; however, typically only in mild cases or where an immune boost is a benefit. This steroid is not going to pack on mass like Anadrol or Deca Durabolin and most men will not have much use for it in an off-season bulking cycle. We can, however, make an exception for females.
