Per ANSI B56-1-2005 section 7.37.3, the floor dimensions of the platform attachment can not exceed 2X the load center distance listed on the truck data plate nor have a width greater than the overall width of the truck (measured across the load bearing wheels) plus 250mm on either side. As long as the customer's truck meets these requirements, they should meet the requirements set forth by OSHA to have a new data plate created for their fork truck. Vestil makes no guarantees as to the fork truck manufacturer generating a new data plate as required by OSHA
