

'97+ Dakota Gen 3 Hemi Conversion Kit Instructions

Thank you for your purchase. This is a bolt on kit that installs a Gen 3 Hemi into your 97+ Dakota.

Oil Pan: Milodon makes a swap pan, part number 30995. This pan allows installation into 1997-2004 Dakota with stock steering. They also offer the proper pickup depending on which engine you have. You can order direct from them @ milodon.com.

Installation: Install brackets onto the correct side of the engine. The left side is marked with an "L" sticker. Install the engine as you would normally and install the frame side bolts. Torque to spec.

Please remember; To insure you have located the engine properly, it is helpful to have the transmission in place.

Once you are happy with the engine fit, install the washers and nuts on the 1/2 inch thru bolt on the frame. Tighten all hardware.

By installing this kit you assume all risks and liability. Schumacher Creative Services Inc. is not liable for any damages, injury, or death caused by installing this product.
