Tips

- After disks are added to the disk box, most disks need to be repartitioned (formatted) before they can be used normally. If your hard disk has important data, you are advised to back up the data in advance to prevent data loss.
- MAC OS and windows support different disk formats. If the hard disk needs to be used in MAC OS and windows for a long time, you are advised to back up data on the hard disk and format it in exFAT format.
- It is normal for hard disks to heat up during high-speed read/write. When the operating temperature of the hard disk is closer to 70° C, data may be lost. Therefore, stop using the hard disk. And it is recommended not to use the product for a long time in an environment with poor heat dissipation.
- the hard disk itself is a consumable, the use of time, environment and other uncertain factors will have a direct impact on the product, it is generally recommended to use 3-5 years to replace. If your hard disk has important data, you are advised to back up the data in advance to prevent data loss.
