ABOUT BABY SUN

BabySun is a token created by a team with strong fundamental knowledge of the Binance Smart Chain and crypto-sphere as a whole.

The team has worked hard internally to implement the best distribution model and tokenomics to ensure that investors are comfortable with hodling while earning Tron (TRX) dividends

The BabySun contract distributes $TRX rewards on an hourly basis.

Baby Sun takes after his Daddy Justin Sun, he loves $TRX so much that he wants to give it away! Earn $TRX through a 8% reflection tax just for holding Baby Sun in your wallet!

DESCRIPTION

BabySun is a frictionless dividend reward generating token that automatically distributes $TRX tokens to holders every 60 minutes. It was built on the Binance Smart Chain with seamless peer-to-peer and lightning fast transactions in mind.

Babysun is a rug-proof community token with an initial liquidity lock period of 6 months, and the entire supply of BabySun tokens will be distributed throughout the BSC community.

BabySun was inspired by Tron's automatic BTT airdrop system and other similar reward tokens in the BSC ecosystem like $BABYCAKE that have proven reward distribution as a utility function can create a healthy and stable ecosystem.

Baby Sun Aims to implement a cryptosphere, where members can buy and sell crypto services and utilize the app, much like telegram for crypto groups.

DESCRIPTION CONT ' D.

BabySun has several aggressive long term goals. The first main goal is to ensure the longevity of the BabySun token by utilizing the TRX rewards accrued by the Team Wallet and Marketing Wallet as a means to perform manual buybacks and burns of BabySun. The BabySun tokens in the Team and Marketing wallets will never be used, further creating a "burn" scenario of 8% total supply and stabilizing the BabySun ecosystem. The BabySun contract has a built-in 3% marketing tax that autoswaps to BNB every time a transaction is made, which will allow the team to continue its marketing efforts without ever impacting the price of BabySun. The BabySun contract also utilizes a 3% Liquidity Pool tax that is auto-swapped in real time, ensuring our liquidity grows in tandem with our marketcap.

Another long term goal is to create cross-chain utilization of BabySun and TRX, where holders are able to swap their holdings on the Binance Smart Chain to other blockchains, primarily the Tronix and Ethereum smart chains. This will be created in a DAPP native to the BabySun website.

BABYSUN ECOSYSTEM

BabySun was created with YOU, the investor, as our number one priority. The $BABYSUN contract was designed for the Binance Smart Chain due to its lighting fast transaction speed and nominal transaction fees.

$BABYSUN is a rug-proof community token with an initial liquidity lock period of 6 months. What will happen after 6 months? We will lock it again!

$BABYSUN will be traded on PancakeSwap initially, lending to the concept of decentralization and creating seamless peer-to-peer transactions. There is no middle man, which means more $BABYSUN in YOUR pocket.

Our contract features anti-bot and anti-whale features to further protect our community. There is a maximum transaction limit of 2% of the total supply, and a maximum amount of $BABYSUN you can hold in your wallet, which is 2.5% of the total supply.

@2021 BABY SUN. ALL RIGHTS RESERVED

BABYSUN ECOSYSTEM CONT'D.

The most exciting feature of $BABYSUN is that you will receive $TRX rewards directly to your wallet every 60 minutes simply just by holding $BABYSUN.

The initial allocation of 4% total supply in $BABYSUN tokens to our MARKETING and TEAM/DEV wallets will NEVER be touched, creating further stability in the market. We will use the dividends in $TRX that are accrued by these wallets to complete manual BUYBACKS and BURNS, ensuring the health of the $BABYSUN economy even further!
