

Élhée

MEDICAL SILICONE BOTTLE, «HEALTHY, SENSORY AND INNOVATIVE»

ACCEPTED BY

98%
OF BABIES

Baby products eco-designed and manufactured in France  

Élhée offers a range of essentials and accessories for baby care that are sensory, curved, soft and poetic, designed to minimise infants and children's exposure to harmful substances.

The Élhée bottle concept: a soft and comforting bottle-feeding solution made from 100% clean, unbreakable and durable materials. Its benefits include:

- ***a unique design with healthy materials*** : zero harmful substances and no risk of microplastics leaching into the baby's milk.
- ***an innovative anti-colic system*** allows better air circulation, which prevents gas and bloating for the child,
- ***a sensory design*** as close as possible to breastfeeding.

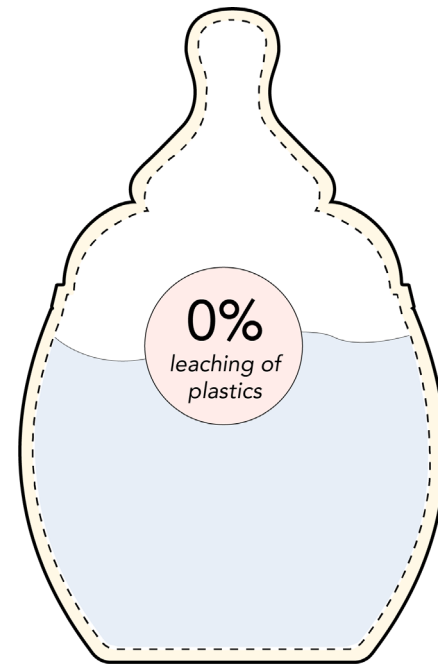

INNOVATIVE BOTTLE MADE OF MEDICAL GRADE SILICONE

Placing safety at the heart of its approach, Élhée opted for state-of-the-art medical grade silicone, as it does not release any volatile substance harmful to babies' health (0% BPA, BPS, phthalates, etc.).

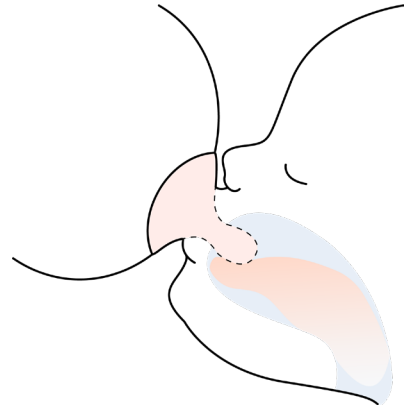

ZERO RISK OF MICROPLASTICS LEACHING

The unique and patented closure system of Élhée bottles prevents the milk and its nutrients from interacting with materials other than those of the bottle and the medical grade silicone teat.

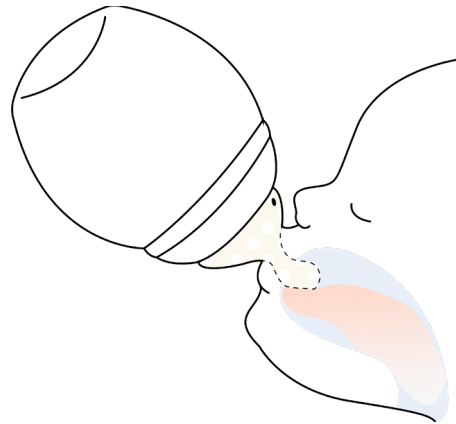

FREE OF
HARMFUL
SUBSTANCES

ZERO RISK
OF NIPPLE
CONFUSION

Teat instinctively recognised by baby.

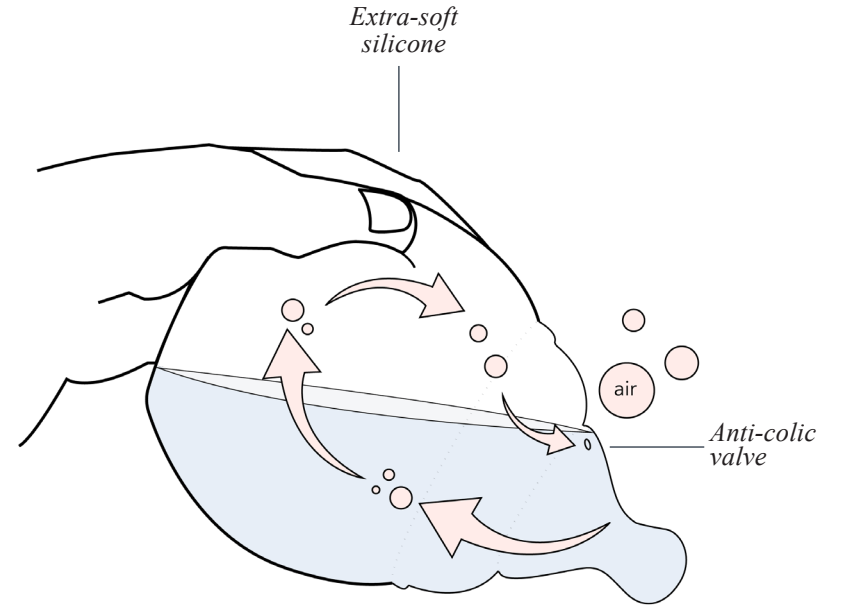

PHYSIOLOGICAL TEAT

Designed to give babies the most natural feeding experience possible, Elhée's extra-soft silicone teat is perfectly adapted to babies' palates*.

It reproduces the shape of the mother's breast during feeding, making it easier to combine breastfeeding and bottle-feeding.

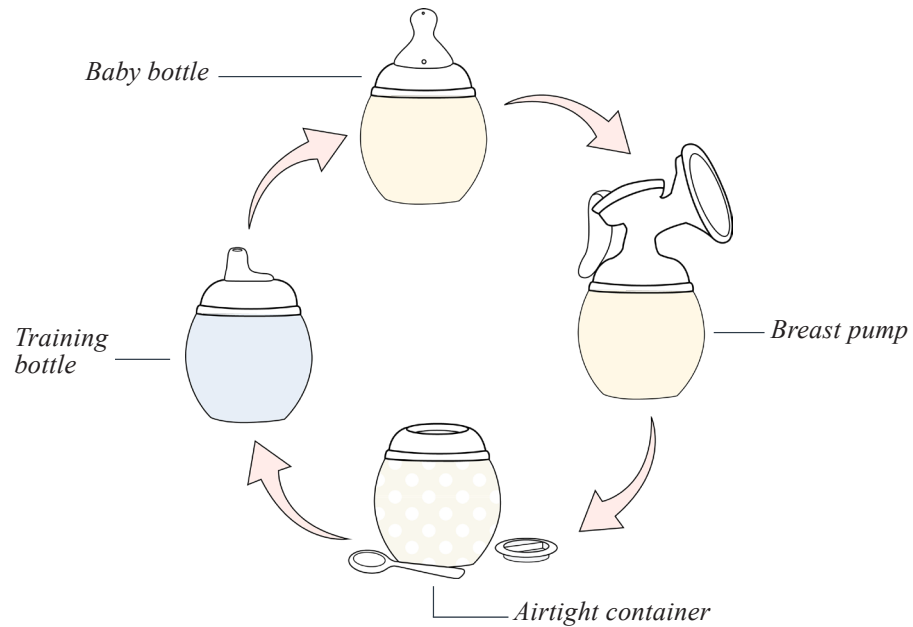

**Teat recommended by the French Union for Oral Health.*

EFFECTIVE ANTI-COLIC SYSTEM

The flexible material combined with the venting system integrated into the teat allows for better air circulation, preventing gas and bloating.

The Élhée bottle is twice as effective as a rigid glass or plastic bottle in preventing infant colic.

ADAPTIVE BABY BOTTLE

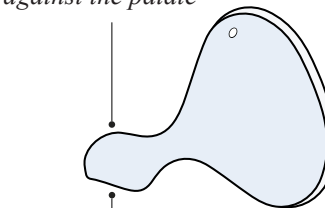

— The 4-in-1 Élhée bottle can be used to collect breast milk using the Élhée adapter compatible with Medela and Avent breast pumps. It can also serve as an airtight container with its silicone lid or as a training bottle with the anti-spill spout.

— It supports babies of all ages on their way to autonomy using soft, light and unbreakable silicone that is easy to hold.

CHOOSING THE RIGHT FLOW RATE FOR THE TEAT

	Slow (S)	Medium (M)	Fast (L)
<i>My baby is new-born or premature.</i>	SLOW FLOW ZERO NIPPLE CONFUSION		
<i>My baby is mixed feeding or weaning.</i>			
<i>My baby drinks infant formula or water.</i>		●	
<i>My baby drinks thickened milk or cereal.</i>		●	●
<i>My baby is over 3 months old and the S and M teats are no longer sufficient.</i>			●

Rounded side against the palate

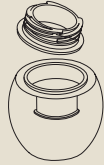

Flat side against the tongue

The S, M, L flow rates are specified under the base of the teat. Disregard the numbers, which are not related to size.

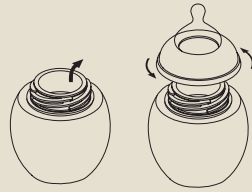

ASSEMBLING THE ÉLHÉE BOTTLE

1. Position the silicone neck in the lower position inside the bottle.

2. Insert the white ring into the slot of the bottle by exerting slight pressure on the top of it, while rotating it between your fingers.

3. Lift the silicone neck vertically along the white ring. Screw the teat back on.

CARING FOR MY ÉLHÉE BOTTLE

— How do I wash the bottle ?

After each use, disassemble the Élhée bottle completely and clean it thoroughly by hand or dishwasher (*beware of the risk of yellowing when using the dishwasher*).

— How do I heat up the bottle ?

The Élhée bottle can be heated in a bain-marie, with compatible bottle warmers and in the microwave (*we do not recommend using the microwave to heat up breast milk*).

— Change teats regularly

For hygiene and safety purposes, it is recommended to replace the teat every 6 to 8 weeks, or as soon as the first signs of deterioration appear.

BLUSH / NUDE

KAKI / BLUE GREY

SAND / BLACK

100%
LEAK-PROOF

THE BUBBLE : SENSORY AND UNBREAKABLE LEARNING CUP

The *Bubble* learning cup in medical silicone facilitates children's autonomy and helps with the transition from the bottle to the glass.

It allows the child to hydrate at night in perfect autonomy without risk of leakage, or on a walk without risk of breakage and in complete safety.

Size 240 ml

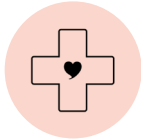

100% HEALTHY BABY BOTTLE

Made of medical grade silicone, without harmful substances.

SOFT AND SENSORY TEXTURE

Soft and delicate touch for an easy grip in baby's first months.

ANTI-COLIC PATENTED

Anti-colic efficiency reinforced by the valve and flexible silicone.

PHYSIOLOGICAL TEAT

Made of extra-soft silicone, it adapts perfectly to the oral cavity of babies.

EASY CARE

Microwave, dishwasher and steriliser compatible.

MADE IN FRANCE

Eco-designed and manufactured in Rhône-Alpes.
