Methenolone Enanthate (otherwise called primobolan) was depicted in 1960. Squibb Company started creating injectable medication in 1962. Methenolone initially was recommended in the event of muscle misfortune after activities, contaminations, long haul diseases, forceful treatment with corticoids or lack

of healthy sustenance, and sometimes it. Primbol 100mg -Methenolone Enanthate. Primbol 100mg is having the drug ingredient called Methenolone enanthate which acts as an immune enhancer so it can also be helpful for AIDS patients. Primbol 100mg is also used for gaining and maintaining lean tissue. Primbol 100mg does not aromatize which for many is a very nice trait, especially.

Methenolone Enanthate is a derivative of DHT, so it binds very well with androgen receptors making it an effective fat burner. Methenolone Enanthate is very suitable for women as virilization symptoms like hirsutism and deepening of the voice are very rare. Dosage. The average effective dose is around 200 mg per week.
