R750 EACH
POOL PILLOW
(R1 400 For 2)

R24,95
POOL NOODLE

WATER saving tips

THE BENEFITS OF A SOLAR BLANKET

Solar blankets come with a host of benefits - here's why you should consider getting one...

1 It prevents evaporation and minimises replacement water. With the severe drought that has hit South Africa, a solar blanket is a must as it reduces water evaporation - sometimes by up to 50%. Interestingly, water evaporation is also the largest cause of heat (energy) loss, so a solar blanket will simultaneously keep your pool water a few degrees warmer too.

2 It will save you money. As the name suggests, a solar blanket collects the UV rays from the sun and transfers them to your swimming pool. Obviously, the sunnier it is, the more heat your pool collects. A solar blanket assists with retaining heat in your pool.

3 It keeps things clean. Another benefit is that a solar blanket will keep your pool much cleaner than normal as it keeps dust and debris out and inhibits algae growth. Likewise, when water from the pool evaporates, a portion of the pool chemicals in the water go with it too. With a solar blanket, you will also cut down on how many times you need to replace those pool chemicals.

4 It will extend your swimming season. Possibly most importantly, insulating your pool with a solar blanket will keep the temperature of your water higher for longer, which means more fun, happy, time outside with your loved ones.

The Pool Team offers 400micron and 500micron solar blankets, which means less evaporation and less topping up of swimming pool water. We also have solar blanket ROLL UP STATIONS, which will make putting on and taking off these water saving solar blankets much easier.
