

# EXTENDED BOSS BARRE PRO ASSEMBLY INSTRUCTIONS

## 1.

On a clean surface that will not scratch the finish of the bars, place two of the horizontal sections of one side of the barre parallel to each other. Take the two specially made Reinforcement pieces and place one each in-line of the horizontal bars:

## 2.

Slide the Reinforcement pieces into the horizontal sections until the ring-stoppers come into contact, as shown below:

## 3.

Line up the pre-assembled Center Support section perpendicular to the horizontal pieces that now have the Reinforcement pieces inside, with set screws facing up:

## 4.

Slide the pre-assembled Center Support over the horizontal pieces until it lines up with the yellow markings:

## 5.

Slide the pre-assembled Center Support until the yellow lines just disappear, and TIGHTEN LIGHTLY. Do NOT fully tighten the set screws at this point:

## 6.

Slide other horizontal bars onto the Reinforcement pieces and into the pre-assembled center support, until they come to a stop against the ring-stoppers. Please note that the fit is intentionally very tight. You may have to slightly “wiggle” the horizontals to get them in place. LIGHTLY TIGHTEN set screws. Do NOT fully tighten the set screws at this point:

### 7.

Align the pre-assembled barre end verticals with the now-assembled horizontals, on each end of the barre (with set screws facing up):

### 8.

After visually ensuring they are square, fully tighten the pre-assembled barre end verticals on each side:

### 9.

Once the barre end verticals are square and tightened in place, fully tighten the set screws on the pre-assembled center support section, in preparation for picking up the barre:

### 10.

Place the pre-assembled base stabilizers to the side of each barre end vertical:

### 11.

With the help of an additional adult, lift the assembled barre upper until it can be placed into the receiving connectors on the base stabilizers:

### 12.

Place the assembled barre upper into the receiving connectors on the base stabilizers. **FULLY** tighten all set screws on the entire barre, once you have ensured that all pieces are square:
