

SEED CYLINDER FEEDER INSTRUCTIONS

(SEED CYLINDER NOT INCLUDED)

SCF-CLEAR

Hold the rod with the loop pointing towards the floor. Secure the regular nut onto the rod. Thread it all the way to the end of the threads. Then add one of the washers. After that, put the bottom tray onto the rod - wavy edges toward the floor. Add the perch plate on top of that. Then add the second washer. Next, secure the lock nut with the nylon insert out. You will need to hold the rod tight while securing the lock nut. Tighten lock nut with a wrench or pliers.

After that, turn upright and slide your seed cylinder onto the rod. **(seed cylinder not included)** You are now ready to hang it from your weatherguard. For weatherguard assembly, please see the diagram below.

Assembled right side up

Assembled - bottom side
