

Weather Guard Instructions

WeatherGuard is a protective guard against rain and snow for hanging hummingbird feeders, oriole feeders, nyjer and seed feeders, tray feeders and butterfly feeders.

Constructed with premium quality 1/8" acrylic, the 13" diameter WeatherGuard hangs above any small feeder to protect both the feeder and the birds feeding on it against rain and snow. Includes brass hardware. Durable and sturdy construction will last a lifetime. Available in Clear, Orange, Red, Yellow, Green or Smokey. The red color attracts hummingbirds, orange attracts orioles, yellow attracts goldfinches and butterflies, clear, green and smokey are neutral and will work with any feeder.

To assemble, place the washer on the threaded end of the hook. Put the threaded end of the hook with the washer on it through the hole from the underside of the weatherguard pushing it through the top. Now screw the hanger onto the hook until tight. Your weatherguard is ready to be hung. The diagram below also shows these instructions.
