

WIRE CAGE INSTRUCTIONS

WC13, WC19 or WC25

If you have a tube feeder, place the base of the cage at the bottom of the feeder and attach it with one of the black plastic nuts included with the wire cage. If you have a different type of feeder, attach the base of the cage to the base of the feeder with the screws included with the wire cage. Then place the feeder with the base up inside the wire cage pushing the feeder's hanging cable or bale wire through the slit in the top of the wire cage and hang your feeder with cage for the birds to enjoy.
