

The Handcuff dummy was designed to aid police and prison services to train extrication techniques for a restrained casualty.

Anatomically correct, the 50kg Handcuff dummy is ideally suited to police and prison services to train for the evacuation of restrained, unconscious casualties in an emergency situation.

Made in the same way as the General Purpose dummy, the Handcuff dummy has slimmer wrists to accommodate handcuffs. The wrists are reinforced with a heavy duty PVC to prevent damage and there is also a PVC removable cuff that will prolong the life of the dummy. Once this removable cuff has been damaged by handcuffs it is easily removed and replaced.

Colours may vary.
