Weight (lb)	642

Pan Characteristics	
Shell	Steel
Forklift Pockets	11" to 8"
Thickness	4.8 mm
Volume Capacity	403 Gallon
Weight (lb)	801

These steel pans are built to last! Engineered to capture and collect liquids and solids from concrete washout and to exceed environmental compliance requirements. These pans are built with four lifting eyes, have 4.8 mm steel floors and walls. There are reinforced forklift channels for lifting the pans upside down to release materials. The 14" pans can be placed under concrete pump trucks during use and after use to catch excess concrete from hoppers during washout.

Features:

- SWPPP Best Management Practice
- Approved for containing concrete washout materials
- Four 25,000-pound, D-rings and four corner lifting eyes, two-way 8" built in forklift pockets
- Heavy duty construction
- Angled interior – aids in release of concrete materials
- Watertight
- Portable
