

GREENER KLEENER

Universal Cleaner & Sanitizer

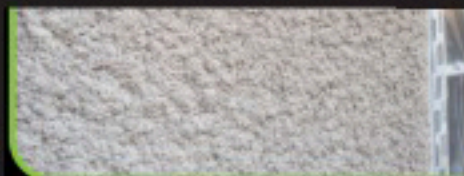

CARAVANS

Greener Kleener is an effective treatment for 99.9% bacterial staining ideal for cleaning algae and other bacterial staining from Caravans. It is safe to use and will not oxidise, alter or discolour any components used in the manufacture of caravans.

It eliminates contaminations within minutes of application and breaks down moss, algae and moulds over time with cycles of sun and rain. For best residual cleaning results allow to evaporate naturally. Greener Kleener is easy to use free of bleach, free of caustic and acidic chemicals. It keeps further staining at bay for at least a year.

After the initial application, further maintenance cycles will be a much shorter process, making it easy to stay on top of equipment cleaning and maintenance. With a pH of 8 (virtually neutral) you have no worry about the long-term effects on children and pets. Just keep them away from treated areas until dry.

Greener Kleener is licenced by HSE as a DIY biocide treatment for biological staining eradication - it is also designated as a WOOD PRESERVER under the EU Biocides Register Greener Kleener is the same product as our "Professional Use Only" cleaner & sanitizer GK Pro, formulated for DIY use and licenced by the Health & Safety Executive.

HOW TO STEP-BY-STEP

Prior to treatment on a dry, rain free day, with no rain forecast for at least 4 hours. Sweep, brush and mechanically remove loose debris and any bulky vegetative growths from your shelter. Cover nearby plants and grass areas with a tarpaulin or waterproof cover (it's safe on hard surfaces).

When using Greener Kleener always wear appropriate clothing to avoid contact with skin including gloves and safety goggles or face visor Pour tap water into your preferred cannister before Greener Kleener - it is a surfactant and foams up vigorously like washing up liquid!

Can be applied with a garden pump sprayer, sponge, watering can, roller or brush. Saturate the surfaces inside and out (slightly wetting is not enough) at around 0-25 litres of mix per m2 simply spray and leave. Allow to evaporate naturally. It is important that the surface is drenched

For heavy bacterial loads you may decide to brush-in, agitating will loosen and move grease & grime, the dirt will be held within the

suds. You may want to rinse this off and follow up with a preventive spray as indicated above.

Should use of the shelter be required before the treatment has evaporates rinse the shelter thoroughly in clean water before allowing access.

WHAT TO EXPECT

Most bacteria will be unviable within 15 minutes of treatment, evidence of dead biofilms will be seen as a change of staining colour by days end, the staining will desiccate and powder away using natural cycles of sun and rain, this timing is weather dependent but evidence of staining is usually gone within two weeks.

If there has been little rainfall for three weeks and staining remains it may be useful to hose down your caravan. If some staining persists it is probably not bacterial in nature, seek advice as to the cause and the appropriate treatment.

WARNINGS

- Not for use on lawns as a moss remover
- Avoid overspray onto grass and plants, may scorch foliage, on accidental spray drench with water immediately
- Keep children and pets away while the area is wet
- safe once dry
- If difficult to restrict access Greener Kleener may be rinsed off with clean water after 1 hour
- Do not spray into freshwater ponds, has the potential to harm aquatic life
- Avoid spraying in high winds

Greener Kleener is safe to use on: Decks, sheds and fences, polycarbonates, greenhouses, polycarbonates, driveways, paths and patios, metal, aluminium & plastic cladding, Caravans, artificial grass, headstones, animal shelters, UPVC, render, fibreglass, brick, stone, slate, marble, all roof materials including thatch

GOGGLES, GLOVES AND FACE MASKS REQUIRED
