

# GREENER KLEENER

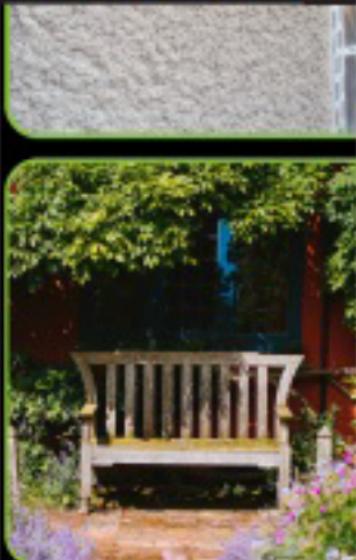

## Universal Cleaner & Sanitizer

Greener Kleener is an effective treatment for cleaning and disinfecting all garden furniture (excluding soft furnishings), it eliminates bacterial contaminations and those caused by nocturnal visitors. It is effective within minutes of application. It breaks down algae and moulds. For best residual cleaning results spray, Greener Kleener or sleet-neutralising so rinse and allow to evaporate naturally.

Greener Kleener is easy to use free of bleach, free of caustic and acidic chemicals. It keeps further bacterial staining at bay for at least a year. After the initial application, further maintenance cycles will be a much shorter process, making it easy to stay on top of your garden furniture cleaning. With a pH of 8 (virtually neutral) you have no worry about the long-term effects on any pets or children. Just keep them away from treated areas until dry.

Greener Kleener is licensed by HSE as a DIY biocide treatment for biological staining eradication - it is also designated as a WOOD PRESERVER under the EU Biocides Registration. Greener Kleener is the same product as our "Professional Use Only" GK Pro, formulated for DIY use and licensed by the Health & Safety Executive.

## GARDEN FURNITURE

## HOW TO STEP-BY-STEP

Prior to treatment on a dry, rain-free day, with no rain forecast for at least 4 hours. Sweep, brush and mechanically remove loose debris and any bulky vegetative growths from your furniture. Cover nearby plants and grass areas with a tarpaulin or waterproof cover (not on hard surfaces).

When using Greener Kleener always wear appropriate clothing to avoid contact with skin including gloves and safety goggles or face visor. Pour tap water into your preferred container before Greener Kleener - it is a surfactant and foams up vigorously like washing up liquid!

Can be applied with a garden pump sprayer, sponge, watering can, roller or brush. Saturate the surfaces inside and out (slightly wetting is not enough) at around 0.25 litres of mix per square meter. Simply spray and leave. Allow to evaporate naturally. It is important that the surface is dried.

For heavy bacterial loads you may decide to brush-in, agitating with leaves and move grease & grime, the dirt will be held within the suds. You may want to rinse this off and follow up with a preventive spray as indicated above.

## WHAT TO EXPECT

Most bacteria will be invisible within 15 minutes of treatment, evidence of dead bacteria will be seen as a change of staining colour. By days end, the staining will desiccate and powder away using natural cycles of sun and rain, this timing is weather dependent but evidence of staining is usually gone within two weeks.

If there has been little rainfall for three weeks and staining remains it may be useful to hose down your surface. If some staining persists it is probably not bacterial in nature, seek advice as to the cause and the appropriate treatment.

## WARNINGS

- Not for use on leaves as a minor irritant
- Should never come into contact with plants, may cause damage, an accidental spray should be rinsed immediately
- Do not eat, drink and smoke away while the area is used
- If swallowed, do not induce vomiting. Seek medical advice
- If solution has contact with eyes, flush with clean water after 15 mins
- Do not spray live freshwater plants, has the potential to harm aquatic life
- Avoid spraying to high winds

Greener Kleener is safe to use on fibreglass, sheds and fences, polyethylene, greenhouses, polythene, aluminium, alloy, stainless steel, plastic, metal, timber, aluminium & plastic roofing, Corian®, artificial grass, membranes, animal skins, PVC, monkey fibreglass, tiles, stone, slate, marble, all roof materials including thatch.

## GOGGLES, GLOVES AND FACE MASKS REQUIRED
