Smarty

Smarty reflectors are available in two versions:

Smarty 5
with 5 prisms

Smarty 6
with 6 prisms

Smarty 6

The Power of 6: Six prisms is the mathematical number that ensures 100% total reflection.

Smarty 6 has it and provides faster and more accurate measurements.

Easy installation

Smarty 6 is available with brass or black plastic thread for easy mounting on top of the flagpole. The plastic thread prevents binding.

Spryte

The new Spryte laser reflectors offer a very practical solution for distance measurement with lasers.

The measurement accuracy is significantly improved to the great delight of the golfers, discussions about distances are a thing of the past.

They are mounted in the most visible place: On top of the flagpole.

With this solution, your club can offer the players an attractive novelty at a very reasonable price.

Patented reflection

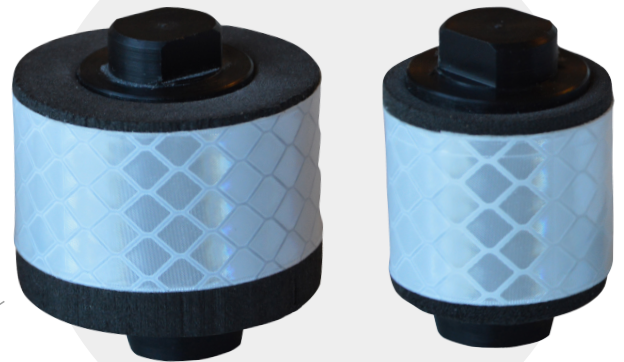

The special patented reflective material makes the laser beam reflected equally regardless from where the laser beam comes from.

Plastic core

Around a plastic core there is a ring of polyurethane foam, on which the reflective material is attached. If you drop the flagpole, then the reflector will do no damage to the green.

Thread

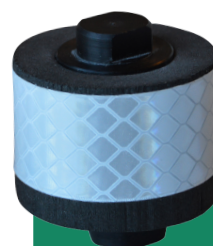

The unit is fitted with 3/8" US 24 or M10 thread and mounted on top of the rod instead of the top nut. The top of the unit is designed so you can use a spanner.

Prism tubes

Six is the mathematical number of prisms which ensures 100% total reflection.

Smarty prism tubes has it and thereby you get a faster and more accurate distance measurement.

Easy installation

The prism tube is mounted 60 cm from the top of the flagpole.

Six prisms

Six prisms ensure 100% reflection, so the players' distance meters provide faster and more precise measurements.

Match your style

Prism tubes are available in black, yellow and white metal. Flagpoles are available in white and yellow color.

1/2" standard
