# Cleaning Products – GIGA (Tank water)

## Daily

See procedure – Daily milk system clean

Must be performed at the end of each day just before the machine is turned off

Purpose: To ensure the milk system is clean overnight so milk does not go off blocking the pathways

Use Cafetto daily milk cleaner 1 litre bottle (Prod no. 71144)  
or Jura Milk System Cleaner Mini Tabs 180g (Prod no. 71150)

## Weekly

See procedure – Weekly milk system clean

Performed once per week

Purpose: To remove any build up of milk fats to ensure the milk frother works correctly

Use Cafetto weekly milk cleaner – 1 litre bottle (Prod no. 71145)

## When prompted

Clean machine – See procedure (Coffee system clean)

Performed only when prompted (Every 200 coffees)

Purpose: Removes coffee oil from the brewing unit and coffee path to maintain the quality of the coffee

Use Jura cleaning tablets - 6 pk (Prod no. 71111)  
- 25 pk (Prod no. 71112)

See procedures – Changing the filter or Descaling the machine

Perform a filter change or descale only when prompted.

Purpose: Protects against lime scale build up inside the machine maintaining water & steam paths

Prod no. 71134

9 pk – Prod no. 71121

36 pk – Prod no. 71122

# Weekly milk system clean

Complete this procedure once a week after the daily milk system clean

1. Remove the splash guard. (Fig 1)
2. Remove spout cover. Press the black releasing buttons and lift. (Fig 2 – 3)
3. Pull the milk outlet down (Fig 4) and the milk hose out. (Fig 5)
4. Remove the auto frother by pulling it towards you. (Fig 6)
5. Separate the auto frother into 6 parts. (Fig 7)
6. Soak all 6 parts in 250ml of warm water & 15ml of Cafetto red weekly solution (71145) for 20 min.
7. Remove the parts from solution and rinse under cold tap water.
8. Check that water flows through the milk outlet freely. (Fig 8)
9. Re-assemble the auto frother ensuring the arrow tips line up. (Fig 9)
10. Refit the auto frother, spout cover and splash guard.

## Important:

The splash guard protects the coffee spout slide ribbon behind it from milk splatters and must be fitted. Be careful not to press on the coffee spout slide ribbon as it can be damaged.

# Troubleshooting:

## Milk flow

- No milk   Spluttering milk   Not filling cups   Froth milk is flat

### Solution:

1. Remove the splash guard. (Fig 1)
2. Press the black releasing buttons on the sides of the spout cover and lift the cover off. (Fig 2 – 3)
3. If the flat milk is flowing normally and the problem is with the froth milk only, replace the air suction (Fig 4), refit the cover and test the milk again. If the problem has been solved, purchase spare air suction (Part no. 70008). If the problem has not been solved go to step 4.
4. Remove the auto frother by pulling the milk outlet down (Fig 5) and pulling the milk hose connector out (Fig 6). Now you will be able to remove the auto frother by pulling it towards you (Fig 7).
5. Separate the auto frother into 6 parts (Fig 8).
6. Soak 6 parts (Fig 8) in 250ml of warm water and 15 ml of Cafetto red weekly cleaning solution (71145) for 30 min.
7. Remove the parts from the solution and rinse under tap water.
8. Clean the milk, air and steam paths using the cleaning brushes. See 2 x milk path holes in Fig 11.(Fig 9 – 13)
9. Pour tap water into the top of the milk outlet (Fig 14). If water does not pour from the two outlets as shown, soak it for another 30 min and retest. If you are not able to clean the outlet, order in another outlet. (Part no. 70007)
10. Re-assemble the auto frother ensuring that the arrow tips line up. (Fig 15)
11. Refit the auto frother, cover, splash guard and test. If the problem has not been solved ph 1300 365 487.
