

## TACTICAL LED FLASHLIGHT

### TO CHANGE BATTERIES:

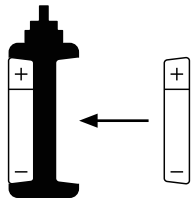

- › Remove the rear cap where the on/off button is.

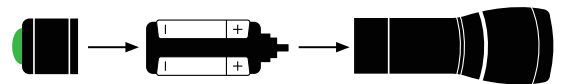

- › Once removed, slide out the battery clip and remove the 3 AAA batteries.

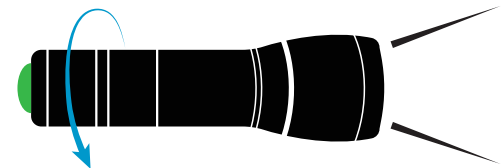

- › Reinstall new batteries with the negative ends of the battery installed on the spring side of each battery cavity.

- › Once installed, slide the battery clip back into the flashlight with the brass plunger sliding in first.

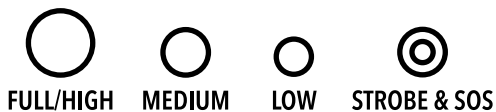

- › Screw the rear cap back on and test functionality by clicking the on/off switch to see that the flashlight functions.

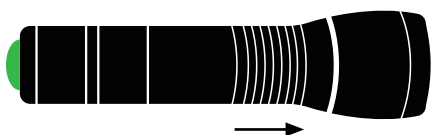

### TO USE:

- › Turn the flashlight on or off by using the green button on the back of the flashlight.

- › The on/off sequence allows you to toggle between the different modes which are normal flashlight, strobe and SOS.

- › You can adjust the focus and light concentration by pulling the head of the flashlight forward. The more forward the head, the more concentrated the light will be as depicted on the head's laser engravings.
