WHAT IS COSMETIC TATTOOING?

Cosmetic Tattooing, also called Micropigmentation or Permanent Makeup, is a cosmetic treatment involving the controlled insertion of safe colour pigments into the epidermis layer of the skin, instantly improving the appearance and adding definition to certain facial features for a semi-permanent effect. This is a cosmetic treatment that defines your eyes, brows or lips with a soft, natural appearance that looks, and stays looking for some time, like perfectly applied make-up or the most subtle of enhancements. All cosmetic tattooing will fade, lighten or metabolise to some degree over time which is due to a number of individual factors.
