

Installation Guide

Handle for EGO Leaf Blowers

1. Close the latch on only one side of the handle.

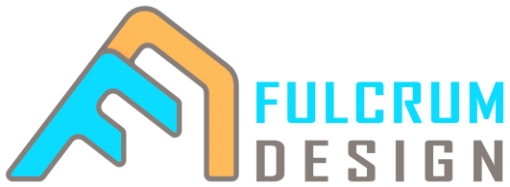

2. Before installing the handle onto the leaf blower, check to make sure that the orientation of both halves of the handle are correct.

Top of handle slopes back towards the body of the leaf blower.

The section of the bottom piece that sticks out more faces towards the nozzle.

- Slide the handle over the end of the blower tube until it stops against the leaf blower and close the second latch. Make sure the shape of the handle is aligned correctly with the geometry of the blower tube (it can only go on one way to fit over the latch on the blower tube).

Larger gap goes on the latch side of the blower tube

Note: the latch may be hard to close (especially on the 765CFM model) but it's designed this way for a snug fit. If needed, push the two halves of the handle together as you close the second latch.
