

# PLYHOME ASSEMBLY INSTRUCTIONS.

## Parts list:

- 2 x Side Panels
- 1 x Headend
- 1 x Footend
- 1 x Centre Rail (Double - Super King)
- 1 x 4mm Allen Key (King & Super King)
- 8 x Slats - Single + Double Size
- 10 x Slats - King Single, Queen, King + Super King
- 1 x Brace (see step 5 image)
- 1 x Centre Leg (King & Super King)
- 1 x 60mm JC Bolt (King & Super King)

Before you do anything, see those little grey connectors sticking out? These are a big deal. They've received all sorts of fancy design awards in Europe and for good reason. They're super strong and very cleverly designed.

All you do is line them up to the corresponding hole then press them together until you hear a 'CLICK'. If you ever need to disassemble this bed, just slide up and then apart to unlock the connector. Easy Peasy!

## Step one.

Lay out the bed frame on carpet or cardboard for protection, with all legs facing inwards. The header is bigger than the footer.

### Step two.

Face the bed from the foot towards the head. You need to connect the left-hand (LH) side to the header ('CLICK').

### Step three.

Next connect the left-hand (LH) side to the footer ('CLICK').

### Step four.

Now connect the RH side to the header and footer, again push the connectors together until you hear a 'CLICK'. You've now got all 4 sides of the bed connected. Wahoo!

For Double - Super King beds - Now fit the centre rail. Make sure this is sitting right down in the slots on the brackets.

For King + Super King beds - Fit the centre leg. Place centre leg under the centre rail. Screw 60mm JC Bolt through the centre rail into the insert nut that is in the end of the centre leg. Tighten from top with the 4mm Allen key. Adjust the foot so it is sitting just above the floor.

### Step five.

Put the brace onto the bed. It goes onto the middle of the bed and gives it super-strength. You'll see the notches that it slots onto. Place the slats into the cutouts and you're done!
