Tie down kits & weights

For the safe operation of your Instant Marquee, it is vital to use the correct medium to secure it properly against wind and weather

No matter how strong your gazebo is, if it blows away in the wind it will be damaged and will cost you money to repair - as well as a possible law suit if it damages persons or property. Below you will find proven solutions to this problem. For soft ground use we always recommend using the heavy duty tie down kit in preference to weights. If planning to use weights, please ask to see our recommended weighting chart.

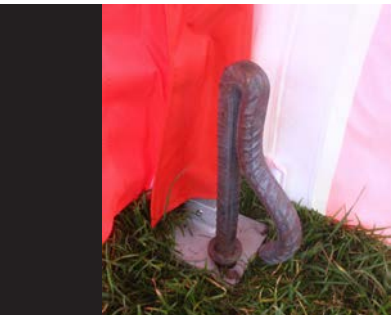

HEAVY DUTY TIE DOWN KIT

Comprising 4 ribbed steel tie down pegs, 4 foot pegs and 4 wall pegs, 4 x 3.5m ratchet straps and a hammer all contained within a handy bag, the h/d tie down set has proven its worth many times in bad weather where Instant Marquees are always the last tents left standing!

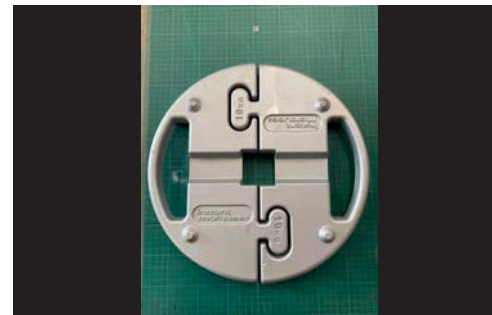

30KGS SQUARE JIGSAW WEIGHT

The 30kgs weight is a bit of a design classic in the tent world. It can be used to secure 1,2, 3 or 4 pop ups simultaneously, it is stackable for where more weight is required, each half weighs 15kgs so it remains with H&S guidelines and with handles all round it is easy to use. Essential for hard ground use

MEGA PEG FOR FOOTPLATES OR STRAPS

Designed for festival tents where flying tents are not an option, or for where it's not convenient to use ratchet straps. These ribbed Mega Pegs are designed to secure the footplate, but they can also be used with ratchet straps internally or externally. Ask to see our drawings of how this works.

20KGS ROUND JIGSAW WEIGHT

Designed for our smaller tents and our dome inflatables where less weight is required, the 20kgs Jigsaw weight is stackable not only on top of another 20kgs but also on the 30 kgs weight above.

50 & 150L Water Weights

The major benefit of water weights is that you do not have to transport the weight with you as long as water is available on site. These purpose-built 50L & 150L weights have handles at the top for carrying & to tie down to, and drains at the bottom.

PRINTED OR PLAIN WATERWEIGHT COVERS

Water Weights are great but they are not great too look at. They are greatly improved by ordering covers, either printed or plain.

Wall Systems

At Instant Marquees we make almost everything in-house, rather than simply shifting boxes from China. This means that we can manufacture walls to suit your particular requirements, so if you cannot see what you want here just send us a sketch with some dimensions and we will make it! All the walls are available either in 500d polyester (a high quality cloth from Korea not China) or PVC from the EEC. PVC is recommended for very heavy duty use or for food tents where it is easy to wipe clean. The Type 3 wall is the best & neatest system, the Market wall is the budget option.

TYPE 3 WALL SYSTEM

The Type 2 wall has 3 flaps at each end of the wall, with full length velcro attachment for security. The flaps cover the leg tube completely, which looks really neat & tidy. It's very quick and easy to fit and very secure in high winds. Available in 3m, 4m and 4.5m lengths.

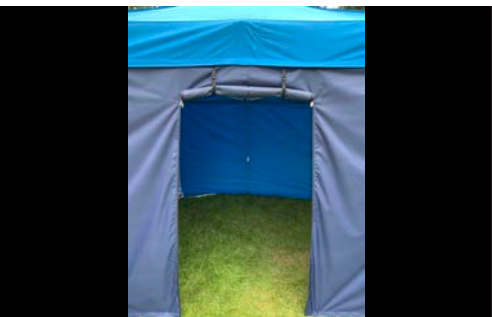

See Type 3 Walls brochure for full details

LARGE WINDOW & CHURCH WINDOW WALL

At the back and l/h side of this tent we have our "large" window Type 2 wall, size 2450mm (w) x 1350mm (h). The r/h side features a "church" window Market wall with velcro buckles in place of the full length flaps.

Church window only available in 3m sizes

TYPE 3 WALL WITH 2 ZIP ROLL-UP DOOR

Doorways can be made with a single or double zip. The standard width is 1 metre but you can specify whatever width you like.

STANDARD WINDOW WALL

The wall on the r/h side is the standard window, size 1350mm (w) x 900mm (h).

TYPE 3 BOOTH WALL

Developed for the programme sellers at the 2012 Olympics, the booth wall system is ideal for those who sell from their stalls. The 2 zips come down to half height from the top of the wall, so opening and closing the stall take seconds, and the legs remain hidden to give a very smart look.

MARKET WALLS

Market walls are secured to the tent via 5 webbing buckles on each side of the wall. It's a well proven system that is secure and easy to use, but the legs are not covered and there is a small gap in the corners.

Wall Systems (cont)

A wall does not have to be full size to look impressive. Half height walls can give a quality look at an exhibition or outdoor event, whether supported on a half height bar or one of our folding aluminium counters.

HALF HEIGHT WALL WITH STABILITY BARS

The Type 2 half height wall has flaps at each end of the wall, with full length Velcro attachment for security. The flaps cover the leg tube completely, which looks really neat & tidy. Half height walls can be plain or printed and can give a really nice look to your stall

HALF HEIGHT WALL SYSTEM WITH KEDER ATTACHMENT TO THE INSTANT COUNTER SYSTEM

Here is another option for the half-height wall. If you opt for the drop-in Instant Counter System, which is usually 3 sided, the simplest printed wall is a 9m half height. Quick & easy to fit and very smart. A top half-height is also available to close the unit off at night.

COVID-FRIENDLY TYPE 3 WALL FOR MARKET TRADERS

The Type 2 Covid-friendly wall has the large market window with a zip opening hatch for passing goods through once they have been bought.

This wall could also be useful in market use in very wet conditions. It will keep goods dry when serving in the rain.

Stability Bars & Footplates

Here we have some special accessories for market traders & others who demand top performance from their stalls.

GROUND ANCHOR FOOTPLATE

This footplate has a “keyhole” laser cut in to the base to allow the easy fitting of our ground anchor system for markets or anywhere else where the tent is erected in the same place on hard ground regularly. Less expensive and far more secure than weights, the system is very quick and easy to use and is made from maintenance free stainless steel

STAINLESS STEEL GROUND ANCHOR

Shown here in the raised position ready to accept a footplate, the ground anchor offers greatly enhanced security over weights with less capital investment and no need to lug all that weight around for every market. Bromsgrove has not lost a market to wind since the anchors were fitted. The head of the anchor is fully flush with the ground when it's retracted. Ask for our spec sheet on his product.

TALL FOOTPLATE WITH BASE BAR FITTING

This footplate is ideal for market traders or festival tents. The base bar adds a lot of stability to weighted tents in windy conditions and it prevents the wall moving around and trying to pull the legs together. If the base bar is secured with a cable tie over the slot it prevents people from getting in under the wall at festivals. For top performance use the mid-height bars as well.

MID HEIGHT STABILITY BAR AND BRACKETS

The mid-height stability bar secures the wall right at its centre of pressure, and adds immeasurably to stability in windy conditions as well as giving a nice taut look top the wall. The base bar just drops in to the slot like the tall footplate opposite, so it's very quick and easy to fit. The welded aluminium brackets fit at the bottom of the top legs, and remain in place once fitted. We always use this system in our rental units when on hard ground and cannot recommend it enough.

PVC GUTTER

Our pop-up tents can be made in to much larger structures by using clamps and gutters. The gutters attach via Velcro to where the inner walls would have been attached, and are surprisingly effective at keeping the water out as we found out during a biblical thunder storm!

Sizes: 2m, 3m, 4m, 4.5m & 6m

Single or double Velcro

With double Velcro you can also attach a wall if needed - this is useful in a row of stalls where one wall can serve two stalls

TENT CLAMP SYSTEM

Where you put two or more tents together to form a larger structure, it is essential to clamp the legs together to rigidify the whole structure and to leave space for the gutter to work properly.

We offer both the traditional metal screw clamp, which is best for longer term installations, and the “soft” clamp in the picture which only takes seconds to install and is favoured by our rental crews.

Festival Facades

For Festival stall holders, the most important thing is to be seen before the customers go off somewhere else. These 2 upgrades can transform the look of your stall and make it stand out from the rest.

THE FESTIVAL FACADE - THE ULTIMATE UPGRADE FOR A POP-UP TENT

Behind the picture on the left is a humble 6x3m pop up - although you would never guess. The facade can be rigged in minutes by 2 persons, is proven to be stable and strong in the wind, can have ordering and serving hatches, Velcro-on menu and price boards etc. And the most important thing is you can create your own look for your stall.

There can surely not be a more cost-effective way to change the way you present yourself to the public.

The system is available for 6x3m and 3m pop ups only.

Festival Banner System

FESTIVAL BANNER OR SKY BANNER

The idea is not new, but the Instant Marquees festival banner system is lightweight, quick to erect, well-engineered, resistant to wind and properly tested, just like all Instant Marquees' products.

It's available for 3x3m, 4.5x3m, 6x3m and 4x4m pop ups.

It can be rigged by 2 persons, takes less than 5 minutes to erect, and folds down to tubes of less than 2m for easy transport.

Marquee Flag Holder

Here is another way to attract customers to your stall. If you mount a 3m flag at the top of the tent leg, the top of the flag will be a full 5m above the ground so it can be seen from a good distance away

MARQUEE FLAG BRACKET

The Marquee flag bracket fits the 42mm square leg tents, and will soon also be available for our new 51mm leg on the Ultra HD tent. It is solidly engineered and very quick & easy to use. The flag sits on our bearing swivel base. The spigot size is 15.6mm for masts with a 16mm ID. The bearing allows the flag to rotate freely in the wind, and removes all the stress loads that rigidly fixed masts have to deal with.

The maximum flag length is 3m in windy conditions (16mph+), or 4m in calm conditions (15mph wind or less)

Branded Table Cloths

Here is another way to smarten up your presentation.

FITTED BRANDED TABLE CLOTH

Branded Table Cloths perform a host of functions:

- 1) They strengthen the presentation of your brand
- 2) They hide the unsightly table underneath
- 3) You can put all your rubbish out of sight under the table

We supply commercial grade Lifetime tables in 5ft & 6ft lengths to go with the table cloths.

Instant Counter System

Designed for festival traders & markets, the Instant Counter system looks so much better than tables & is a smart way to increase trade at your stall

INSTANT COUNTER DETAILS

The counters simply drop in to brackets on the legs, so you can configure them as you see fit. One a 3x3m tent you can use 1,2, 3 or 4 counters, on a 6x3m as in the photo you can have a front and mid counter, so that your customers can be served in the dry/out of the sun.

Length: 3m Packed length: 1.5m Width: 0.4m
Weight per counter: 10kgs Max load per counter: 75kgs
Rigging time (per counter): 1 minute
