who care about the environment.

Toxin-free control of all your household pests.

**AQUACELL WORKS
LIKE A SPIDER WEB
TO ENCASE AND
IMMOBILISE INSECTS**

Stops insects in their tracks!

This food-grade active polymer is widely used in the pharmaceutical and nutraceutical industries as a capsule coating for medications; and in the food industry as a filler in processed foods.

AQUACELL INSECT GUN employs a purely physical mode of action to encase and quickly immobilise a wide range of insects and arachnids (spiders and scorpions). It contains no neurotoxic components.

AQUACELL INSECT GUN is sprayed directly on to the target pest, where the unique polymer structure of the cellulose encases and immobilises the insect.

Death arises from the insect having been immobilised, just as if it were caught in a spider web.
