

Clean Culture®

Digestive Aid and Inner Health

- May support gut health
- May improve nutrient digestion
- May support beneficial intestinal microbes
- Contains prebiotics

Why use Clean Culture®?

Digestive disorders are extremely common and may be the result of long periods between feeds, diets with a high grain intake, extended administration of antibiotics, sudden change of feed, vitamin and mineral deficiencies, and in horses who are prone to ulcers. **Clean Culture** aims to support the digestive system with natural ingredients including prebiotics and sea minerals.

Digestive Health Facts

More than half of all horses may experience stomach ulcers and stomach distress at some stage in their life. Horses who have ulcers will often present symptoms such as going off their feed, weight lost, dull coat and can appear nervous or 'hot' and 'girthy'.

Feeding Guidelines

We recommend feeding **Clean Culture** in the following situations:

- When buying a new horse
- When bringing your horse in from spelling
- During injury recovery
- During times of stress - competition, travel, environment change
- Periodically during season changes

Add to feed twice daily for 10 days as required

Morning feed: 1 x 50ml
Evening feed: 1 x 50ml

Based on a 500kg horse

Ingredients

A proprietary blend [Fulvic acid, Mannan oligosaccharides (MOS), Saccharomyces cerevisiae, Glycerine, Sea minerals, Pau D' Arco, Moorlife, Vitamin A, Chinese liquorice root powder] 100ml

Sizes Available

2.5L / 84 oz fl

About the Ingredients

ECOCELL contains mannan oligosaccharides (MOS). MOS are prebiotics and added to **Clean Culture** to aid gastrointestinal health and assist the growth of healthy bacteria in the gut. MOS are also thought to bind harmful pathogenic bacteria.

Liquid sea minerals have been included to support the digestive tract pH.

Chinese licorice root powder is a herb that may be beneficial for the overall general health of the horse.

Pau d'Arco is a herb sourced from the inner lining of the bark of the Pau d'Arco tree native to South America. It may provide anti-inflammatory properties.

Moorlife and **fulvic acid** both contain a wide range of micro nutrients and trace minerals, and may have antioxidant properties.

Vitamin A is included for its role in supporting the mucus lining within the digestive tract.

Testimonial

"I purchased Bond at the end of last year which was at the time an extremely risky purchase: He had never scored over 50% in dressage, he always had rails, he had control issues cross country. When I got him I was fairly confident some of his issues were tummy related. He then started to go off his food, his poo became pretty well diarrhea, he lost weight. **A 10 day course of Clean Culture and WHAT a difference. He is waiting at the gate and neighing for his food. He has gained weight. He is so shiny. He licks his bowl clean. He seems much more relaxed and happy** in himself in the paddock and to handle (he is generally pretty good under saddle anyway!). This product is brilliant and I'm so glad I've found it as he is a little stress head so tummy issues will always be part of his management. Thankyou so much!"
Asha Warnock, 2017
