

Acceptable Quality Standards

Plate Support Fork

Feng Studio

Below are the manufacturing standards to be expected with the purchase and use of this product. Some variations are to be expected from the provided images.

Surface Imperfections

The top and bottom surfaces have a different texture, with the bottom being smooth and the top being rough.

This is due to the bottom surface resting on the bed, while the top surface does not rest on a smooth surface.

Sanding Marks

Marks will be leftover from sanding and post-processing. This will result in a slightly matte and uneven texture, since the surface is smoothed by sandpaper.

This is required in order to achieve the correct thickness to fit between the plate and PCB.

Layer Visibility

Separate layers will be visible on the sides of the product running parallel to the white arrow.

This is due to how liquid plastic is layered in 3D printing.
