

# DOOR & DRAWER INSTALL SPECIFICATIONS

Model # 13-31-SSD Shown

Model # 17-24-SSDR Shown

## GENERAL INFORMATION

**INSTALLER:** Leave these instructions with consumer.  
**CONSUMER:** Retain for future reference.

### **WARNING**

This unit is to be installed by a qualified, professional service technician.

**Important:** READ THESE INSTRUCTIONS CAREFULLY BEFORE STARTING INSTALLATION

- When installing this unit directly below another unit, only install with AOG built-in products.
- For proper installation, be sure to use the correct cutout dimensions as specified for your specific model number.
- It is recommended that silicon caulking (not supplied) is applied around the back of the door/drawer cabinet trim before sliding the cabinet assembly into the opening.
- Some models may include an additional owner's manual.
- **When used for propane cylinder storage, a louvered door model is required.**

**CAUTION:** Make sure the enclosure is properly vented. See your grill owner's manual for venting requirements, or consult your local codes.

### **WHEN USING A PROPANE TANK CYLINDER:**

- **Never locate a cylinder under or near a grill unless sufficient ventilation and shielding is provided to prevent any heating of the cylinder regulator and hose.** Refer to any additional instructions included with your door (and/or your grill owner's manual) for the required installation method of propane tank cylinders.
- **FOLLOW ALL THE SAFETY WARNING AND INFORMATION FOUND IN THESE INSTRUCTIONS, ON YOUR PROPANE CYLINDER, AND IN YOUR GRILL OWNER'S MANUAL ABOUT SAFE STORAGE AND USE OF PROPANE GAS.**

# INSTALLATION GUIDELINES

For proper installation, be sure to use the correct cutout dimensions as specified for your model number. Locate your model on the following pages for dimensions, and reference the cut-out diagram of your unit for proper orientation.

**Important:** Doors and drawers are supplied with 8 screws for installation. If installing into a concrete island, pilot holes are required.

**Important:** When installing in an AFD GFRC Island, use the bracket and screws provided with the island.

## DOOR

Slide in and fasten the unit securely into the island enclosure using the supplied hardware through the installation screw slots in the top and bottom of the unit.

### For doors with propane tank trays:

To use, simply open the door, pull out the sliding cylinder tray, place your cylinder on the tray and push the tray back in. The cylinder is now ready for connection to your grill.

**Important:** Refer to any additional instructions included with your door for the required installation method of propane tank cylinders.

## DRAWER

Before installing your drawer, remove the drawer from its base by completely pulling it out. Release the drawer from the drawer slides by pressing the black lever down on the right side, and up on the left side (Fig 2-3). Then pull outward on the drawer until it comes free of the runners.

1. In order to properly support the weight of your drawer, it is necessary to provide a secure, level surface in the rear of the unit (see Fig 2-4). This may be accomplished by using bricks, 2 X 4's, etc. Be sure that the height of this rear support is  $\frac{1}{8}$ " higher than that of the front opening support, so that your drawer sits level.
2. Slide in and fasten the unit securely into the island enclosure using the supplied hardware through the installation screw slots in the top and bottom of the unit.
3. To re-attach the drawer; extend the drawer slides completely and align the drawer into the slides, pushing the drawer closed. Open the drawer to verify that it has locked in place.

**MODEL:** 20-30-SD  
**CUT-OUT:** 20 1/2" x 30"

**DOUBLE ACCESS DOORS**  
**MODEL:** 20-30-SSD  
**CUT-OUT:** 21" x 30"

*Also available: (not shown)*

- MODEL:** 14-20-SSDL **CUT-OUT:** 15" x 20 1/2"
- MODEL:** 17-24-SSDL **CUT-OUT:** 18" x 24 1/2"
- MODEL:** 20-14-SSDL **CUT-OUT:** 21" x 14 1/2"
- MODEL:** 24-17-SSDL or SSSDR **CUT-OUT:** 25" x 17 1/2"
- MODEL:** 20-14-SSDRV **CUT-OUT:** 21" x 14 1/2" x 20 1/2"
- MODEL:** 12-18-SD **CUT-OUT:** 12 1/2" x 18 1/2"
- MODEL:** 18-12-SD **CUT-OUT:** 18 1/2" x 12 1/2"
- MODEL:** 24-17-SD **CUT-OUT:** 24 1/2" x 17 1/2"
- MODEL:** 14-20-SD **CUT-OUT:** 14 1/2" x 20 1/2"
- MODEL:** 16-39-SSD **CUT-OUT:** 16" x 39"

\* Available in left or right hinge

## CARE & CLEANING

By following these recommendations, you will enjoy the beauty and convenience of your unit for many years to come.

### STAINLESS STEEL

As needed, use a grill cleaner (or a soapy water solution) and a clean cloth to remove grease and dirt from the outside of the unit. For tough deposits, a copper pad can be used. Always wipe with the grain. Rinse and dry completely. Then follow up with a stainless steel cleaner and a clean cloth.

If this routine cleaning is not performed, the stainless steel may become dull and develop surface rust (due to use and atmospheric conditions). If left uncleaned, significant damage and pitting may occur.

**Important:** DO NOT use steel wool, any other metal tools, or any other cleaners/chemicals to clean the exterior other than recommended above. Such items promote rust.

**When this unit is installed in a corrosive environment such as near the ocean (salt air), poolside (chlorine and/or pool chemicals) or any other location with exposure to high salt/chloride content or corrosive chemicals/solutions, it will be more susceptible to corrosion and MUST be maintained/cleaned more frequently.**

- DO NOT store any corrosive chemicals (chlorine, hydrochloric acid, fertilizer, etc.) near your stainless steel unit.
- DO NOT allow any corrosive materials (masonry dust, debris, etc.) to settle on your stainless steel unit.
- These environments, chemicals, and materials may cause the 304 stainless steel to develop surface rust and consequently pitting. Under these conditions the unit MUST be cleaned at least monthly. Inspect your unit often and clean accordingly.

Fig. 4-1

# SAFE USE & MAINTENANCE OF PROPANE GAS CYLINDERS

## IMPORTANT FOR YOUR SAFETY

### READ AND FOLLOW ALL WARNINGS PROVIDED WITH THE PROPANE-GAS CYLINDER.

When operating this appliance with a propane-gas cylinder, these instructions and warnings **MUST** be observed.

**FAILURE TO DO SO MAY RESULT IN A SERIOUS FIRE OR EXPLOSION.**

## CYLINDER/CONNECTOR REQUIREMENTS

- Propane-gas cylinders, valves, and hoses must be maintained in good condition and must be replaced if there is visible damage to either the cylinder or valve. If the hose is cut or shows excessive abrasion or wear, it must be replaced before using the gas appliance (see e.).
- This unit, when used with a cylinder, should be connected to a standard 5-gallon (20 lb.) propane-gas cylinder equipped with an OPD (Overfill Prevention Device). The OPD has been required on all cylinders sold since October 1, 1998, to prevent overfilling.
- Cylinder dimensions should be approximately 12" (30.5 cm) in diameter and 18" (45.7 cm) high. Cylinders must be constructed and marked in accordance with the *Specifications for Propane Gas Cylinders of the U.S. Department of Transportation (D.O.T.)* or the National Standard of Canada, *CAN/CSA-B339, Cylinders, Spheres, and Tubes for Transportation of Dangerous Goods*.
- The cylinder used must include a collar to protect the cylinder valve, and the cylinder supply system must be arranged for vapor withdrawal.
- The pressure regulator and hose assembly used must match the specification for Type I by *ANSI Z 21.58/CGA 1.6* (see Fig. 5-1).
- The propane-gas cylinder valve must be equipped with a cylinder connection coupling device, described as Type I in the standard defined in paragraph e. above. This device is commonly described as an Acme thread quick coupler.
- If the propane-gas cylinder comes with a dust plug, place the dust cap on the cylinder valve outlet whenever the cylinder is not in use.

## QUICK COUPLER OPERATION

**To connect the regulator/hose assembly to the propane-gas cylinder valve fitting:** Press the hand nut on the regulator over the Acme thread fitting on the cylinder valve. Turn the hand nut clockwise to engage the threads and tighten until snug.

The use of pliers or a wrench should not be necessary. Only cylinders marked "propane" may be used.

**To disconnect:** Turn the hand nut counterclockwise until detached (Fig. 5-1).

**Important:** Before using the unit, and after each time the cylinder is removed and reattached, check the hose for wear (see a.) and check all connections for leaks. Turn off the unit valves and open the main cylinder valve, then check connections with soapy water. Repair any leaks before lighting the unit.

**CAUTION:** Always turn the propane cylinder main valve off after each use, and before moving the unit and cylinder or disconnecting the coupling. This valve must remain closed and the cylinder disconnected while the appliance is not in use, even though the gas flow is stopped by a safety feature when the coupler is disconnected.

**Carefully** inspect the hose assembly each time before the gas is turned on. A cracked or frayed hose must be replaced immediately.

If the appliance is stored indoors, the cylinder must be disconnected and removed. Disconnected cylinders must be stored outdoors, out of the reach of children, with threaded valve plugs tightly installed, and must not be stored in a building, garage, or any other enclosed area.

## FOR YOUR SAFETY

- DO NOT store a spare propane-gas cylinder under or near this appliance.
- NEVER fill the cylinder beyond 80-percent full.
- IF THE INFORMATION IN a. AND b. IS NOT FOLLOWED EXACTLY, A FIRE CAUSING DEATH OR SERIOUS INJURY MAY OCCUR.

Fig. 5-1 Type I Acme thread quick coupler

## ENCLOSURE REQUIREMENTS

**FOR YOUR SAFETY, you must provide the openings listed below for replacement air and ventilation of the unit enclosure. One side of the enclosure shall be left completely open to the outside; OR 4 (minimum) ventilation openings **MUST** be created:**

- Each opening must have a minimum of 10 sq. in. of free area. The openings must be equally sized.**
- Two openings must be in the side walls of the enclosure, at the top level, and spaced at a minimum of 90 degrees.** The openings must begin 1" or less below the countertop level and end no more than 5" below the countertop level.
- Two openings must be in the side walls of the enclosure, at the floor level, and spaced at a minimum of 90 degrees.** The openings must begin 1" or less above the floor level and end no more than 5" above the floor level.
- The openings must remain unobstructed:** The clearance between the openings and any items outside of the enclosure is a minimum of 6". The clearance between the openings and any items within the enclosure is a minimum of 2".

It is acceptable to use RHP venting panels (PN 5510-01). Contact your dealer.

**KEEP THE REQUIRED VENT OPENINGS AND SURROUNDING AREA OF THE ENCLOSURE CLEAR AND FREE AT ALL TIMES.**

**WARNING:** Ventilation openings in side walls shall not communicate directly with other enclosures of the outdoor cooking gas appliance.

## NOTES PAGE

Please use this page to record any information about your unit that you may want to have at hand.
