

Installation Instructions

Marquis collection by Kingsman ATRIUM

Model Numbers: MCVP42N, MCVP42NE, MCVP42NE2, MCVP42LP, MCVP42LPE2 Certified to: ANSI Z21.88-2017 • CSA 2.33-2017, CSA 2.17-2017 Vented Gas Fireplace Heaters

Model Numbers: MCVP42NH, MCVP42NHE, MCVP42NHE2, MCVP42LPH, MCVP42LPHE, MCVP42LPHE2 Certified to: ANSI Z21.88-2017 • CSA 2.33-2017, CSA 2.17-2017 Vented Gas Fireplace Heaters

This appliance may be installed in an aftermarket, permanently located, manufactured home (USA only) or mobile home, where not prohibited by local codes.

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases, unless a certified kit is used.

WARNING: If the information in these instructions are not followed exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

-Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

-WHAT TO DO IF YOU SMELL GAS

Do not try to light any appliance.

Do not touch any electrical switch; do not use any phone in your building.

Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions. If you cannot reach your gas supplier, call the fire department

-Installation and service must be performed by a qualified installer, service agency or the gas supplier.

DANGER

HOT GLASS WILL CAUSE BURNS.

DO NOT TOUCH GLASS UNTIL COOLED.

NEVER ALLOW CHILDREN TO TOUCH GLASS.

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at-risk individuals.

If the barrier becomes damaged, the barrier shall be replaced with the manufacturer's barrier for this appliance. For Propane Horizontal installations the venting must be an additional one foot above the minimum vertical rise off the flue before going horizontal.

INSTALLER: Leave this manual with the appliance.

CONSUMER: Retain this manual for future reference.

VENTED GAS FIREPLACE HEATER: NOT FOR USE WITH SOLID FUEL.

> A Division of R-Co. Inc. 2340 Logan Ave. Winnipeg, Manitoba Canada R2R 2V3 Ph.: (204) 632-1962 Printed in Canada January 8, 2020 Part# 42MCVP-MAN17

Pre-installation Questions and Answers

About curing of the paint

Your stove or fireplace has been painted with the highest quality silicone stove paint. This paint dries quickly in 15-20 minutes when first applied at the factory. However, due to the high temperature silicone components, the paint will cure when heat is applied to the appliance as it is first used. The following information applies to the curing process to get the paint fully hard and durable.

Fire the appliance four successive times for 10 minutes each firing and a 5 minute cool down between each. Be aware during log and firebox paint curing that a white deposit may be developing on the inside of the glass doors. It is important to remove this white deposit from the glass doors using a fireplace glass cleaner.

- Babies, small children, pregnant women and pets should leave the area during the cure phase.
- Ventilate well, open doors and windows.
- Do not touch during curing.

Why does my fireplace or stove give off odour?

It is normal for your fireplace to give off some odor at first. This is due to the curing of the paint, adhesives, silicones and any undetected oil from the manufacturing process as well as the finishing materials used with the installations (e.g. marble, tile and the adhesives used to adhere this product to the walls can react with heat and cause odours).

It is recommended that you burn your gas fireplace or stove for a minimum of four hours at a time with the fan off (if a fan is present) after the curing of the paint has been completed. These odours can last upward to 40 hours of burn time; keep burning at a minimum of four hours per use until odours dissipate.

Noise coming from the fireplace?

Noise is caused by the expansion and contraction of metal as the appliance heats up and cools down. This is normal and is similar to the sounds produced by a furnace or heating duct. This noise does not affect the operation or longevity of your fireplace.

It is also normal for the fan to make some noise when it comes on. This noise can be reduced somewhat by turning down the speed of the fan with the variable speed control. Be aware, however, that this will reduce the volume of heated air circulated into the room by the fan.

Note to the Installer:

Be sure appliance is working properly and its operation (including remote control operation, if included) is fully explained to and understood by the customer.

Operations and Maintenance Instructions

For safe installation and operation note the following:

- Be sure to read and understand all the instructions in this manual before operation of appliance.
- Ensure all wiring is correct and properly enclosed to prevent possible shock.
- Check for gas leaks.
- Make sure the glass door is properly installed before operation. Never operate the appliance with the glass door removed.
- Make sure venting and termination cap are installed and unobstructed.
- If brick or porcelain liners are used, ensure they are installed.
- Verify that the pilot can be seen when lighting the appliance. If not, the log or rock placement is incorrect.
- If the unit is turned off, you must wait a minimum of 60 seconds before re-lighting it.
- Venting systems should be periodically examined by a qualified agency.
- The flow of combustion and ventilation air must not be obstructed.
- The Burner/Log Assembly has been engineered and permanently adjusted for proper flame control.
- Periodically remove the logs from the grate assembly and vacuum any loose particles from the grate and burner areas. See Log Placement page to remove logs. Vacuum burner parts and replace logs.
- Never use your gas fireplace as a cooking device.
- Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing.
- Areas in and around the Chase Vent Openings should be cleaned annually.

Warnings, Installations and Operations - Installation Regulations

This gas appliance must be installed by a qualified installer in accordance with local building codes, or in the absence of local codes, with the current CAN/CSA-B149.1 or .2 Installation Code (in Canada) or the current National Fuel Gas Code Z223.1- NFPA 54 when installed in the United States.

This appliance, when installed, must be electrically connected and grounded in accordance with local codes, or in the absence of local codes, with the current CSA C22.1 Canadian Electrical Code or with the National Electrical Code; ANSI/NFPA 70 when installed in the United States.

AWARNING

FOR SAFE INSTALLATION AND OPERATION OF YOUR GAS FIREPLACE PLEASE NOTE THE FOLLOWING:

- 1. Do not clean when the glass is hot.
- 2. Do not use abrasive cleaners.
- 3. Using a substitute glass will void all product warranties.
- 4. For safe operation, glass doors must be closed.
- 5. When purging the gas line, the glass front must be removed.
- 6. Do not strike or abuse glass. Take care to avoid breakage.
- 7. Do not alter gas orifice.
- 8. No substitute materials may be used other than factory supplied components.
- 9. This appliance gives off high temperatures and should be located out of heavy traffic areas and away from furniture and draperies.
- 10. Children and adults should be alerted to the hazards of the high surface temperatures of this appliance and should stay away to avoid burns or ignition of clothing.
- 11. Young children should be carefully supervised when they are in the same room as the appliance. Toddlers, young children and others may be susceptible to accidental contact burns. A physical barrier is recommended if there are at risk individuals in the house. To restrict access to a fireplace or stove, install an adjustable safety gate to keep toddlers, young children and other at risk individuals out of the room and away from hot surfaces.
- 12. Under no circumstances should any solid fuels (wood, paper) be used in this appliance.
- 13. Under no circumstances should this appliance be modified. Any parts that have to be removed for servicing should be replaced prior to operating this appliance.
- 14. Any safety screen, guard, or barrier removed for servicing an appliance must be replaced prior to operating the appliance.
- 15. Installation and repair should be done by a qualified service person. The appliance should be inspected before use and at least annually by a professional service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding material, et cetera. It is imperative that control compartments, burners and circulating air passageways of the appliance be kept clean. Make sure that the gas valve and pilot light are turned off before you attempt to clean this unit.
- 16. Clothing or other flammable material should not be placed on or near the appliance. This appliance should not be used as a drying rack for clothing nor should Christmas stockings or decorations be hung from it.

- 17. Do not use this heater if any part has been under water. Immediately call a qualified service technician to inspect the heater and to replace any part of the control system and any gas control which has been under water.
- 18. Do not operate appliance unless completely installed as per installation instructions.
- 19. Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.
- 20. WARNING: Do not operate appliance with the glass front removed, cracked or broken. Replacement of the glass should be done by a licensed or qualified service person.
- 21. The appliance area must be kept clear and free from combustible materials, gasoline, and other flammable vapors and liquids.
- 22. The front of the fireplace gives off high temperatures that could ignite combustible material which is kept close to the front of the unit.
- 23. Ensure that power to the Fireplace is turned off before servicing.
- 24. Do not operate this Fireplace without the glass front or with a broken glass.
- 25. Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to the owner's information manual provided with this appliance. For assistance or additional information consult a qualified installer, service agency, or the gas supplier.
- 26. Operation of this appliance when not connected to a properly installed and maintained venting system or tampering with the blocked vent shutoff system can result in carbon monoxide (CO) poisoning and possible death.
- 27. This appliance is equipped with a three-prong (grounding) plug for your protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle. Do not cut or remove the grounding prong from this plug.
- 28. **NOT INTENDED FOR USE AS A PRIMARY HEAT SOURCE.** This appliance is tested and approved as either supplemental room heat or as a decorative appliance. It should not be factored as primary heat in residential heating calculations.
- 29. This appliance must not be connected to a chimney flue serving a separate solid-fuel burning appliance.

Installation Requirements for the Commonwealth of Massachusetts

In the Commonwealth of Massachusetts, the installer or service agent shall be a plumber or gas fitter licensed by the Commonwealth.

When installed in the Commonwealth of Massachusetts or where applicable codes; the unit shall be installed with a CO detector per the requirements listed below.

- 1. For direct-vent appliances, mechanical-vent heating appliances or domestic hot water equipment, where the bottom of the vent terminal and the air intake is installed below four feet above grade the following requirements must be satisfied:
 - **A.** If there is not one already present, on each floor level where there are bedroom(s), a carbon monoxide detector and alarm shall be placed in the living area outside the bedroom(s). The carbon monoxide detector shall comply with NFPA 720.
 - B. A carbon monoxide detector shall be located in the room that houses the appliance or equipment and shall:
 - Be powered by the same electrical circuit as the appliance or equipment such that only one service switch services both the appliance and the carbon monoxide detector;
 - Have battery back-up power;
 - Meet ANSI./UL 2034 Standards and comply with NFPA 720; and
 - Have been approved and listed by a Nationally Recognized Testing Laboratory as recognized under 527 CMR.
 - **C.** A Product-approved vent terminal must be used, and if applicable, a Product-approved air intake must be used. Installation shall be in strict compliance with the manufacturer's instructions. A copy of the installation instructions shall remain with the appliance or equipment at the completion of the installation.
 - **D.** A metal or plastic identification plate shall be mounted at the exterior of the building, four feet directly above the location of vent terminal. The plate shall be of sufficient size to be easily read from a distance of eight feet away, and read "Gas Vent Directly Below".
- 2. For direct-vent appliances, mechanical-vent heating appliances or domestic hot water equipment where the bottom of the vent terminal and the air intake is installed above four feet above grade the following requirements must be satisfied:
 - A. If there is not one already present, on each floor level where there are bedroom(s), a carbon monoxide detector and alarm shall be placed in the living area outside the bedroom(s). The carbon monoxide detector shall comply with NFPA 720.
 - **B.** A carbon monoxide detector shall:
 - Be located in the room that houses the appliance or equipment;
 - Be either hard-wired or battery powered or both; and
 - Shall comply with NFPA 720.

A Product-approved vent terminal must be used, and if applicable, a Product-approved air intake must be used. Installation shall be in strict compliance with the manufacturer instructions. A copy of the installation instructions shall remain with the appliance or equipment at the completion of the installation.

For the state of Massachusetts a <u>T-handle gas shut-off valve</u> must be used on a gas appliance. This T-handle gas shutoff valve must be listed and approved by the state of Massachusetts. This is in reference to the state of Massachusetts state code CMR238.

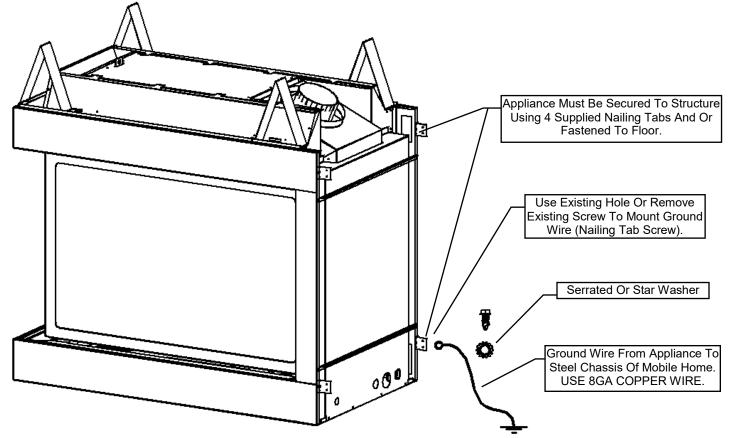

Carbon Monoxide (CO) Detector

NOTE: It is recommended that a Carbon Monoxide (CO) Detector be installed in or near bedrooms and on all levels of your home. Place a detector about 15ft [4.5m] outside the room that houses your gas appliance.

Certified for installation in a bedroom or bed/sitting room. In Canada must be installed with listed millivolt thermostat. In USA see local codes.

Mobile Home/Manufactured Housing Installation

This Direct Vent System Appliance must be installed in accordance with the manufacturer's installation instructions and the Manufactured Home Construction and Safety Standard Title 24 CFR, Part 3280, or the current Standard for Fire Safety Criteria for Manufactured Home Installations, Sites, and Communities ANSI/NFPA 501A, and with CAN/CSA Z240 MH Mobile Home Standard in Canada.

THE VENTED GAS FIREPLACE HEATERS IN THIS MANUAL MAY BE INSTALLED IN MANUFACTURED (MOBILE) HOMES AFTER FIRST SALE IN THE USA.

THE VENTED GAS FIREPLACE HEATERS IN THIS MANUAL MAY BE INSTALLED IN MANUFACTURED (MOBILE) HOMES IN CANADA.

Please follow the current ANSI/NFPA 70 National Electrical Code in the USA and CAN/CSA C22.1 Canadian National Electrical Code in Canada.

An appliance must be grounded to the steel chassis of the home with 8 ga. copper wire using a serrated or star washer to penetrate paint or protective coating to insure grounding.

Use carriage bolt at the attachment point (see diagram above) to secure the appliance to the floor.

Warning: Do not compromise the structural integrity of the manufactured home wall, floor or ceiling, during installation of appliance or venting.

For required venting components see venting installation in appropriate section of this manual.

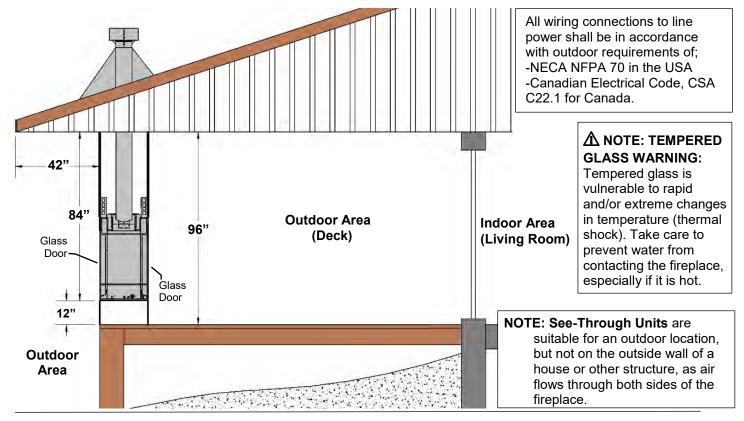

Certified for installation in a bedroom or bed/sitting room. In Canada must be installed with listed millivolt thermostat. In USA see local codes.

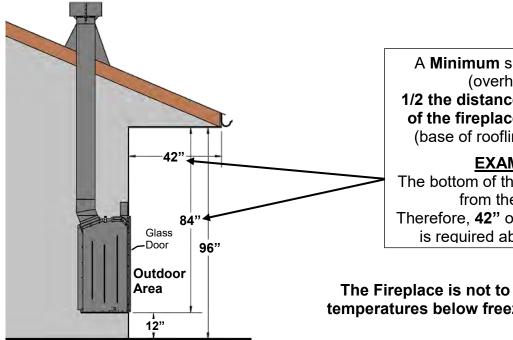

Fireplace Installations in Covered Outdoor Locations - FOR BASIC MILLIVOLT UNITS ONLY- NO FAN - NO LIGHTS-

CAUTION – Installation of an indoor gas fireplace with an outdoor exposure is not covered under the (ANSI Z21.88 – CSA 2.22 or ANSI Z21.50 – CSA 2.33) standard(s) used to certify the indoor gas-fired fireplace. The Intertek safety certification will not apply to this installation method. This installation method must be deemed acceptable by the Authority Having Jurisdiction (AHJ) prior to the indoor gas fireplace being installed.

Kingsman and Marguis Direct Vent fireplaces may be installed into outdoor locations provided they are suitably protected from direct water impingement.

However, all installation clearances in the appliance manual must be observed. Framing, Clearances to Combustibles, Mantel Heights, Facing Requirements, Venting Installation, etc. Use supplied Safety Screen.

A **Minimum** sheltering cover (overhang) of 1/2 the distance from the base of the fireplace to the ceiling (base of roofline) is required. EXAMPLE:

The bottom of the fireplace is 84" from the ceiling. Therefore, **42**" of sheltering cover is required above fireplace.

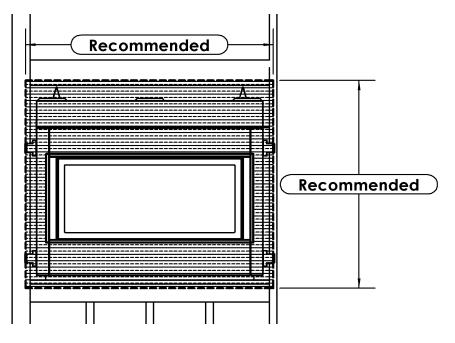

The Fireplace is not to be operated in temperatures below freezing (0°C / 32°F).

Recommendations for Finishing of Clean View Linear Products

When finishing the wall around the fireplace, it is critical that the wall covering be fastened properly. It is acceptable to pre-drill holes and use self-tapping screws which may be used to fasten a backer for tile, marble, etc. Screws being installed through non-combustible board should be self-tapping type with a maximum length of 2 inches. Wall covering fasteners, such as screws or nails, are not permitted in some locations. Do not drill or install longer screws which may penetrate into the lower cover panel area as this may damage internal components.

• Only non-combustible materials may be used over the face of the appliance.

• We recommend that CONCRETE BOARD (non-combustible material) be tied in to the entire perimeter of the fireplace for durability.

Finishing Recommendations (Obtained from professional construction contractors and finishers):

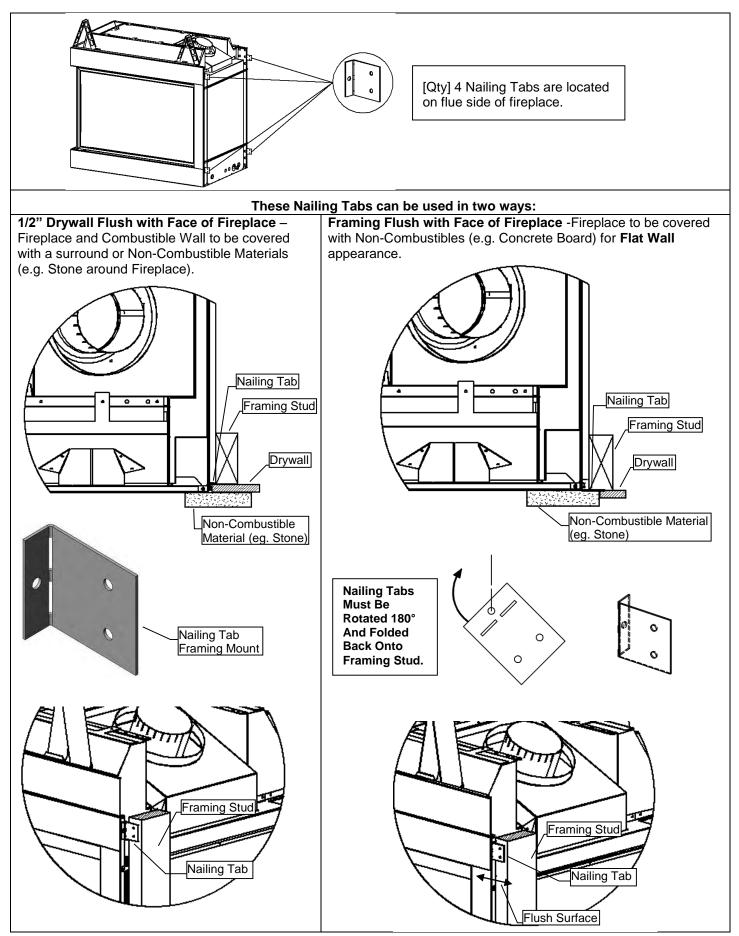

- Frame unit with metal studs (minimum 20 gauge). Wooden studs may be used, but may cause drywall screws to pop or pull due to wood studs drying out.
- Minimum of 1/2" CONCRETE BOARD cement board (this non-combustible panel is ULC listed as a wall shield/floor protector) and fasten to the entire perimeter framing.
- Use fiberglass (mesh) tape for all joints in area of the fireplace.
- Use Yellow joint mud (contains high amounts of glue) two coats, finishing with one coat of green topping mud, sand and prep for painting.
- If not using a surround, a metal "L" Trim may be used to finish perimeter of CONCRETE BOARD.
- Refer to the following website for more information on using CONCRETE BOARD Cement Board: <u>www.cgcinc.com</u> OTHER NOTES:

-A full single sheet of non-combustible board (no joints) above the unit is recommended if possible.

-It is preferred to attach the non-combustible board to **framing only** and not directly to the unit to allow for expansion and contraction during normal operation.

-Lighter colored painted surfaces may discolor due to heat exposure.

Framing- Nailing Tab Guide

Framing Your Gas Fireplace

This section is intended for qualified installers only. Before beginning, make note of where the gas and electrical accesses are located on the unit. This will streamline the construction process. Furthermore, familiarize yourself with the venting and clearance requirements (see Venting section) for this appliance. Failure to comply with those requirements can seriously compromise the safety and operation of the fireplace.

Specifications

- 1. Cold climate installation recommendation: When installing this fireplace against non insulated exterior wall or chase, it is recommended that the outer walls be insulated to conform to applicable insulation codes. Drywall & vapor barrier must be installed over insulation to prevent contact of insulation and unit.
- Choose fireplace location and frame in accordance with the fireplace framing dimensions specified (view diagrams).
 Drywall or other combustible material can extend up to the Drywall Stops located on the sides of the unit, and up to the bottom and top.
- 4. A Hearth is not required for this unit.

Vertical Venting in Cold Climates

In cold climate conditions where temperatures go below -10 degrees Celsius or 14 degrees Fahrenheit, we recommend that the chase be insulated and where the vent pipe enters into the attic space that the pipe be wrapped with an insulated Mylar sleeve. This will increase the temperature of the vent and help the appliance to vent properly in cold weather conditions.

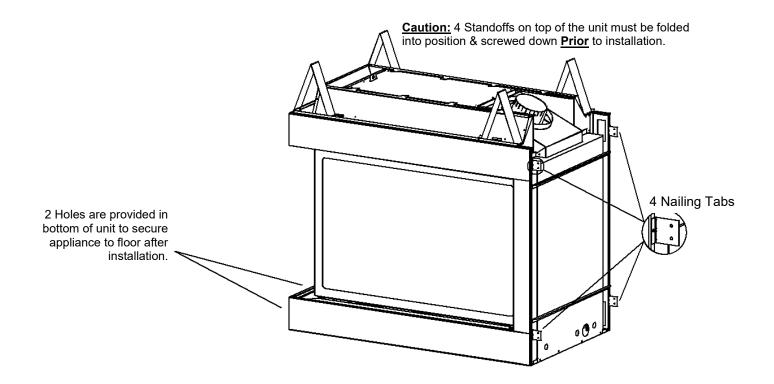

It is also important in vertical vented direct vent appliances that the appliance be operated daily during the winter months as this will help stop the termination from freezing up. We recommend using a thermostat. Set at room temperature to allow the unit to cycle.

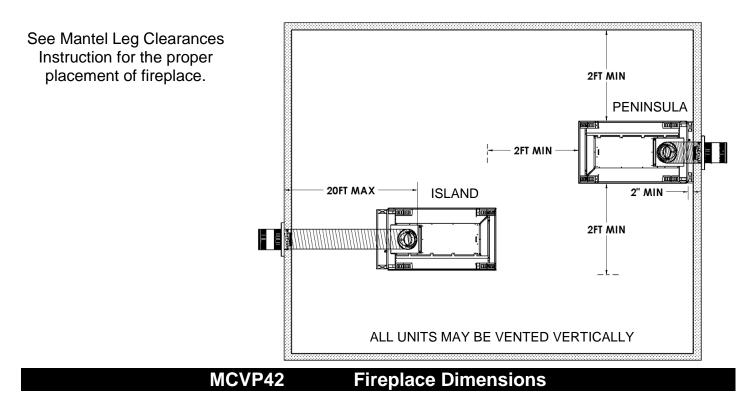

For IPI models it may be necessary to set the appliance to Standing Pilot mode to maintain heat in the cavity. The purpose of this procedure is to prevent cold air from penetrating the chimney and then onto the living space. Therefore, when the internal temperature is slightly elevated the fireplace is able to freely exhaust its combustion and hence making it easier to startup.

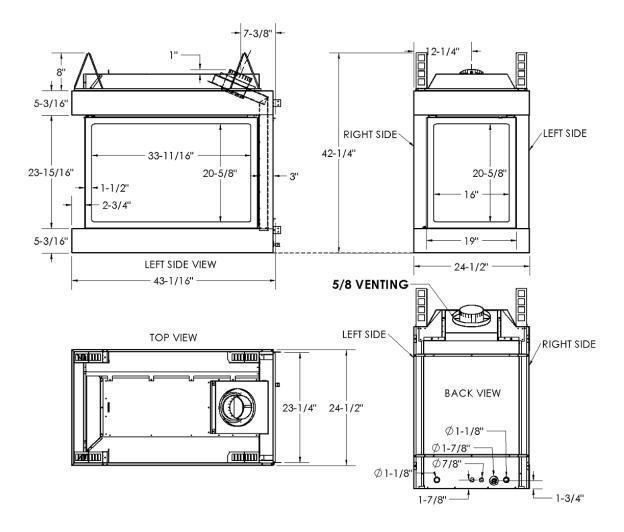

Certified for installation in a bedroom or bedsitting room. In Canada must be installed with listed millivolt thermostat. In USA see local codes.

Stand-off Locations

Make note of where the stand-off locations are. These stand-offs are provided as indicators to illustrate the boundaries for framing. Therefore, no framing material is permitted to extend beyond these stand-offs.

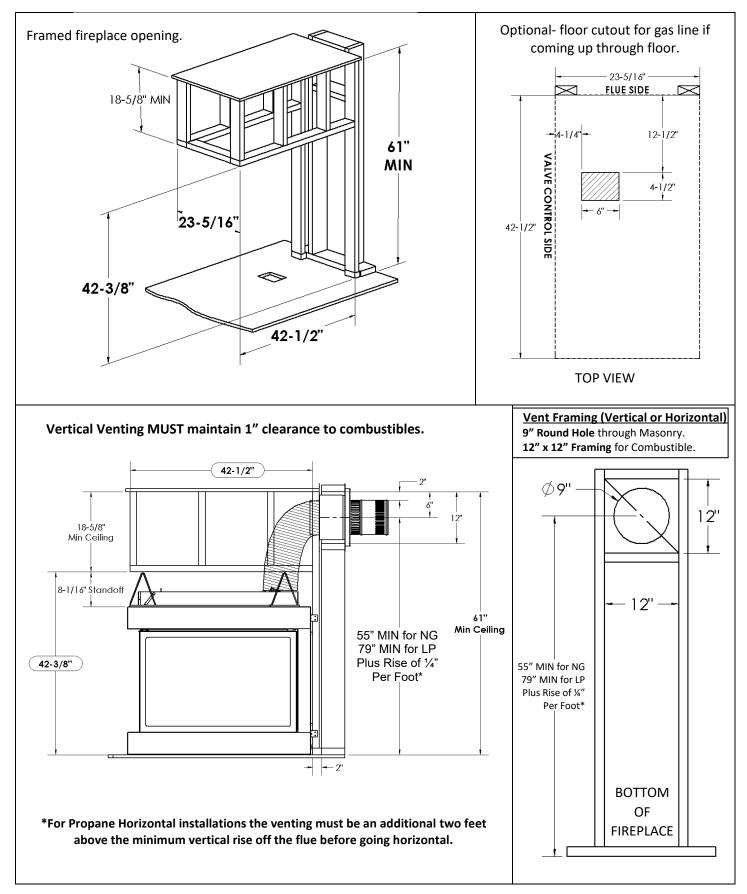

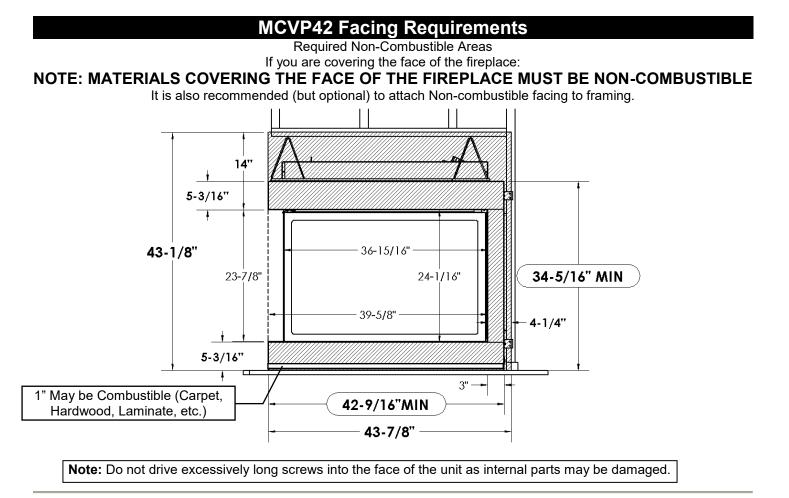

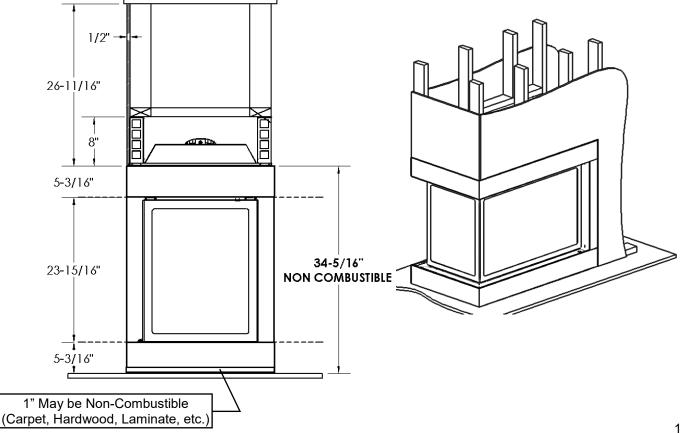

Framing Dimensions

These structures are not load bearing.

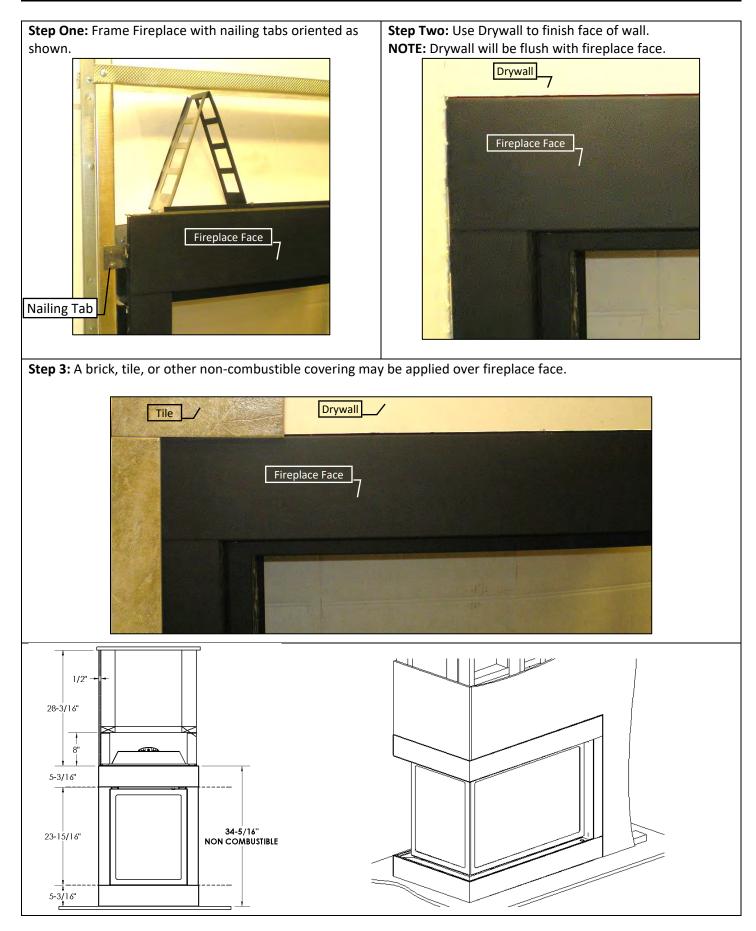

Combustibles (i.e. Drywall) may be installed flush with top of Fireplace. Side facing to be installed to standoffs only.

Basic Finishing MCVP42

Mantel Clearances

Before installing any mantels it is important to determine the combustibility of its material(s). There are two types of mantels to consider: Combustible and Non-Combustible.

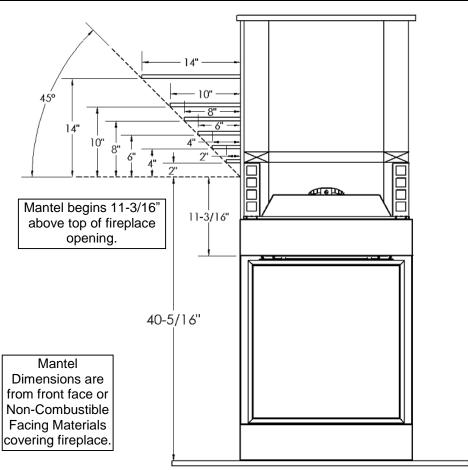

A **Combustible Mantel** is one that consists of material(s) that may discolor, combust, or lose its integrity in the presence of heat. These types of mantels must strictly conform to the dimensional requirements shown.

Conversely, a **Non-Combustible Mantel** is one that is constructed with material(s) that will not combust. Check your local codes and regulations to determine whether your mantel is combustible or Non-Combustible.

The advantage of a Non-Combustible Mantel is that it can begin at the top of the fireplace opening.

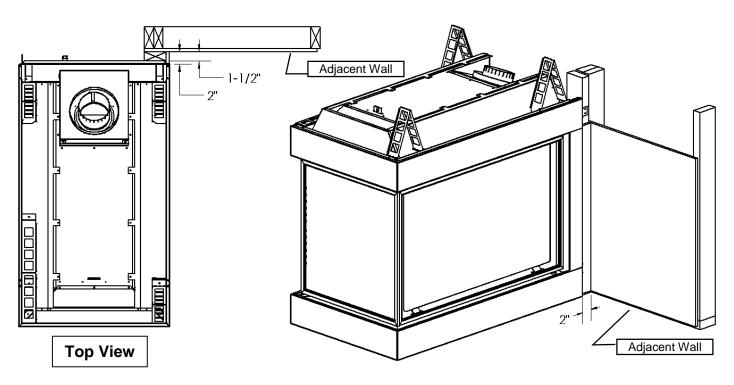

Combustible mantels must adhere to the dimensional restrictions shown.

Combustible Objects on Non-Combustible Mantel Warning-Combustible objects must not be placed on a Non-combustible Mantel unless the mantel meets the dimensional requirements for a Combustible Mantel. Determine whether your mantel conforms to the requirements of a Combustible Mantel.

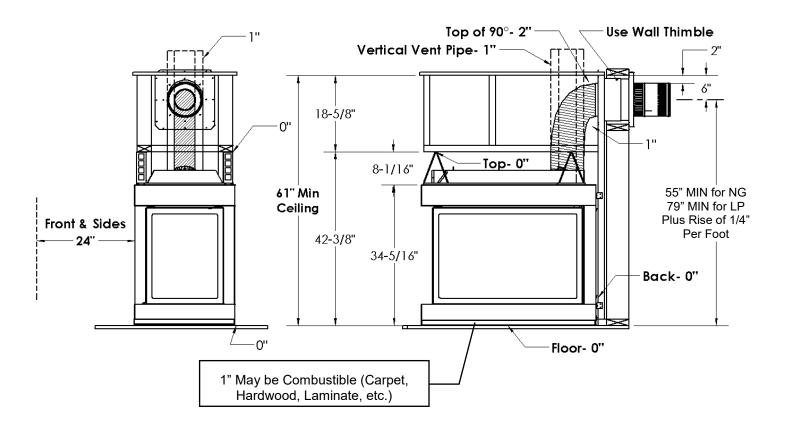

Mantel Leg Clearances

Adjacent Wall must be 1-1/2" from standoff (2" from edge of front face frame).

MCVP42 Clearance to Combustibles

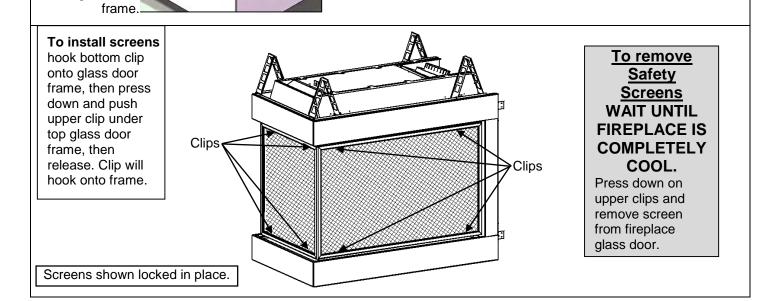

| Clearance to Combustibles MCVP42 | |
|--|--|
| Front and Sides | 24" |
| Back (from Stand-offs) | 0" |
| Floor* | 0" |
| *Note: If appliance is installed directly on carpeting or othe flooring, a metal or wood panel extending the full width and Carpet, hardwood, or laminate may extend 1 inch above th | d depth of the appliance must be used. |
| Minimum Ceiling Height (from bottom of fireplace) | 61" |
| Top (from Stand-offs) | 0" |
| Top of 90° Bend in minimum Enclosure of 61" | 2" |
| Top of 90° Bend in Enclosure over 67" | 2" |
| VENTING SYSTEMS | |
| Top of Horizontal Pipe | 1/1/2" |
| Side & Bottom of Horizontal Pipe | 1" All Vent Systems |
| Vertical Vent Pipe | 1" All Vent Systems |

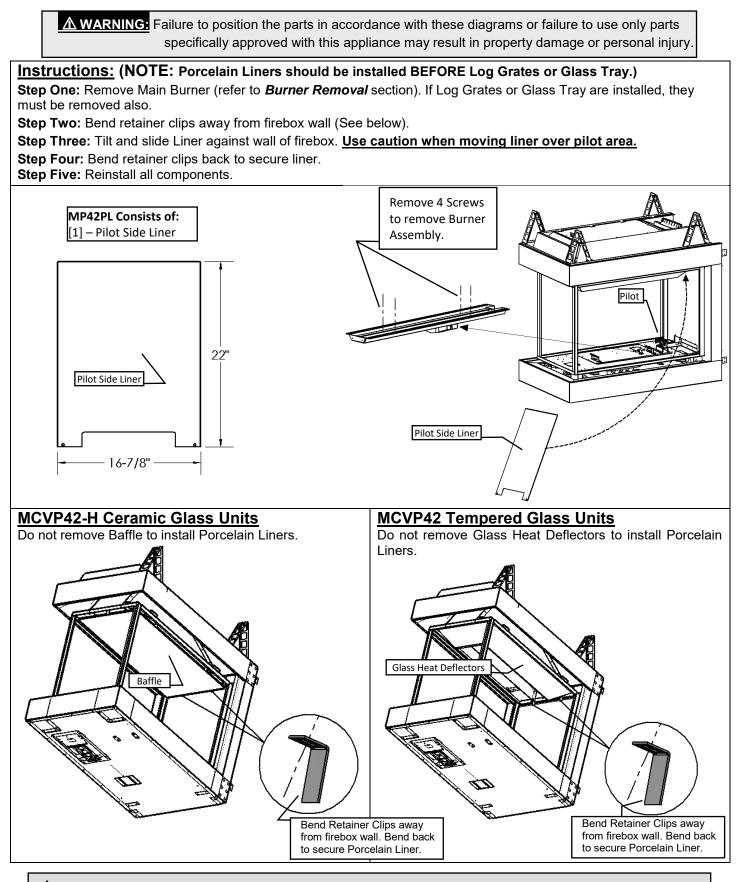

MCVP42 Child Safety Screen Installation

Contents of Kit: [3] Child Safety Screens- Ready to Install **Assembly Instructions:** Attach screen to fireplace as per instructions below. NOTE: Screens are symmetrical from top to bottom. **WARNING**: Wait until unit is COMPLETELY cool before touching glass or attempting to install or remove Child Safety Screens. First install smaller end screen. Then install side screens. 17 M Press down and push upper clip under top glass door frame. Hook lower clip

onto glass door

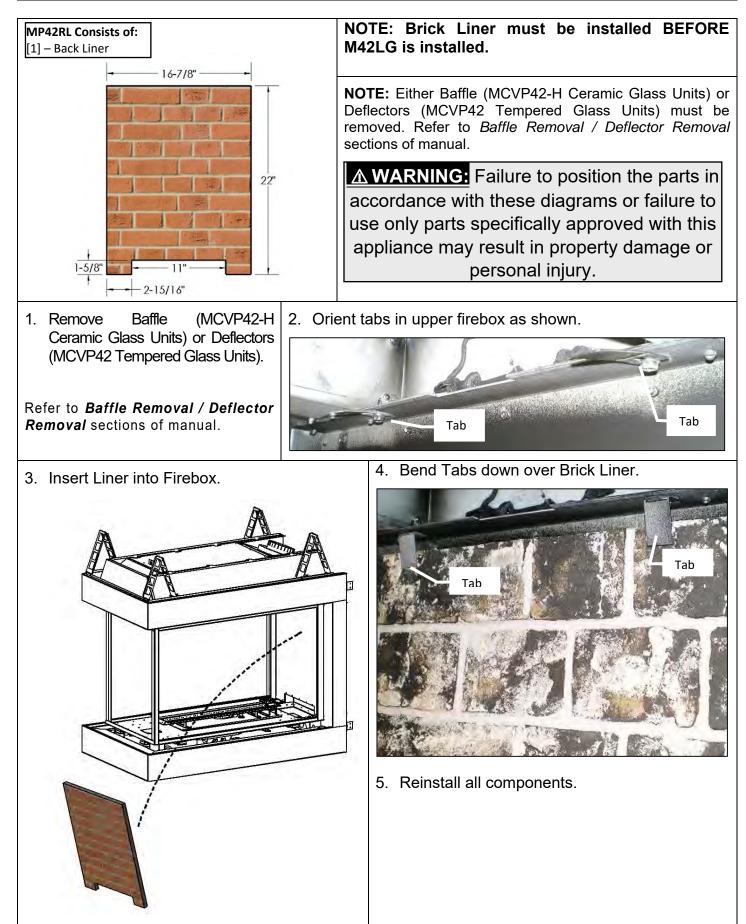

MP42PL

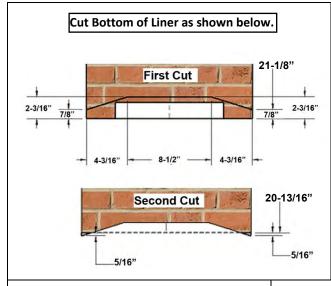

▲ Note: Warping and Discoloration of Porcelain or Painted Metal Liners Is Not Covered Under Warranty. Both Porcelain and Painted Metal Liners may discolor and warp during normal operation of your appliance. This is normal, and not considered a defect.

MP42RL -Brick Liner Installation- When using M42LG Log Grates

MP42RL -Brick Liner Installation- When using MP42GT Glass Tray

NOTE: Brick Liner MUST BE CUT and installed AFTER MP42GT is installed.

NOTE: Either Baffle (MCVST42-H Ceramic Glass Units) or Deflectors (MCVST42 Tempered Glass Units) must be removed. Refer to *Baffle Removal / Deflector Removal* sections of manual.

▲ WARNING: Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

 Remove Baffle (MCVST42-H Ceramic Glass Units or Deflectors (MCVST42 Tempered Glass Units).

Refer to *Baffle Removal / Deflector Removal* sections of manual.

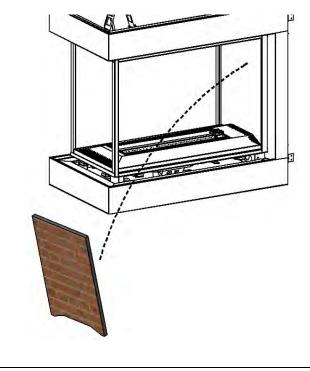

2. Orient tabs in upper firebox as shown.

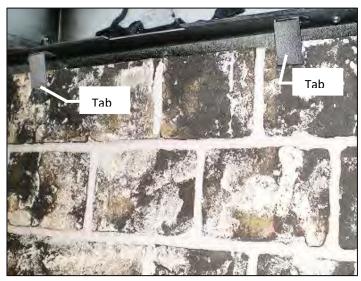

- 3. Install MP42GT. Refer to *MP42GT Installation / Removal* section.
- Cut MP42RL Liner as shown above.

- Use caution as Brick Liners are Fragile. -

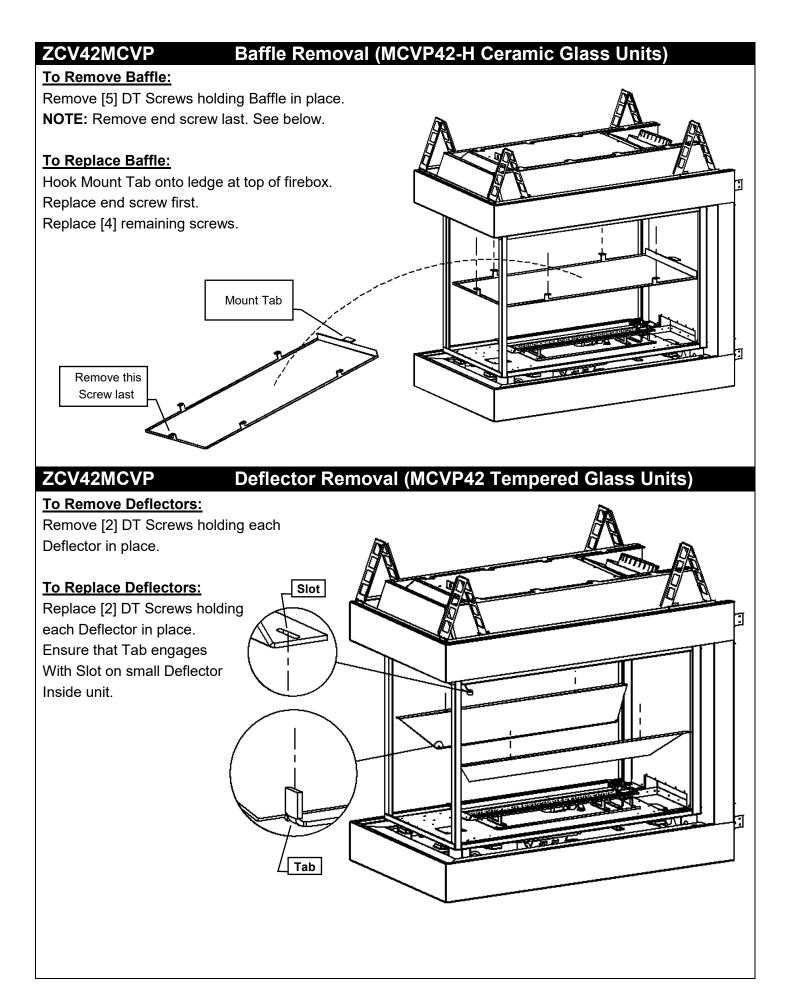

5. Insert Liner into Firebox.

6. Bend Tabs down over Brick Liner.

7. Reinstall all components.

MP42-GT Installation / Removal

Contents of Kit: 1 Glass Tray

Instructions:

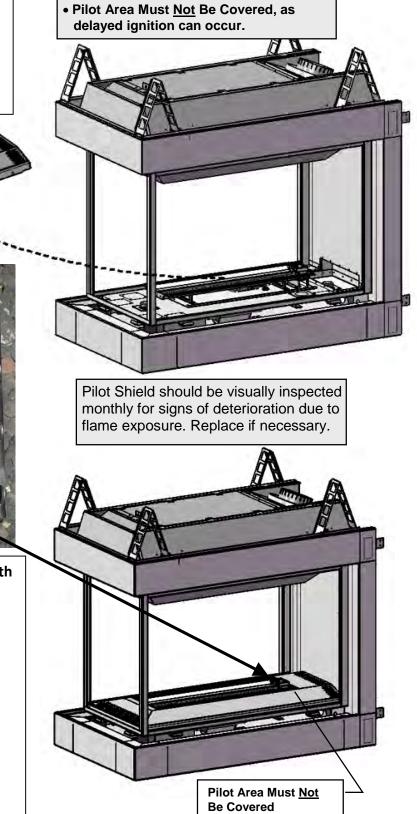

To Install: Place Glass Tray into firebox as shown.

To Remove: Lift Glass Tray from one edge and carefully remove.

Use caution around pilot area.

NOT FOR USE WITH MP42RL.

The following items can be used with the Glass Tray:

- ULK3 Light Kit
- MQLOG1
- MQLOG2
- M42LOG3
- RBCB1 Cannonballs
- VLBIT4 or VLBIT6
- Decorative Glass
- MQSTONE
- MQROCK2 or MQROCK3
- MQEMBER

Refer to appropriate section in manual for these items.

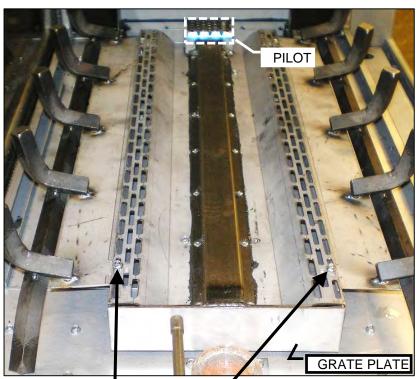

M42-LG Installation / Removal

42MCVP

Contents of Kit:

- 1. [2] Log Grates
- 2. [2] Large Bags 3/4" Lava Rock
- 3. [3] 350 Embers
- 4. [1] Vermiculite
- 5. [1] Insulation Wool
- 6. [1] Grate Plate
- 7. [6] DT Screws

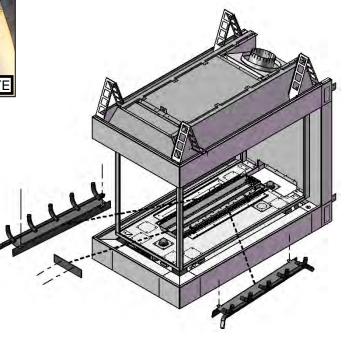

Instructions:

To Install:

- 1. Place Grate Assemblies into firebox.
- 2. Slide Grate Assemblies under slotted area of burner tray.
- 3. Secure with screws.
- 4. Secure Grate Plate to end of burner tray with screws.

To Remove:

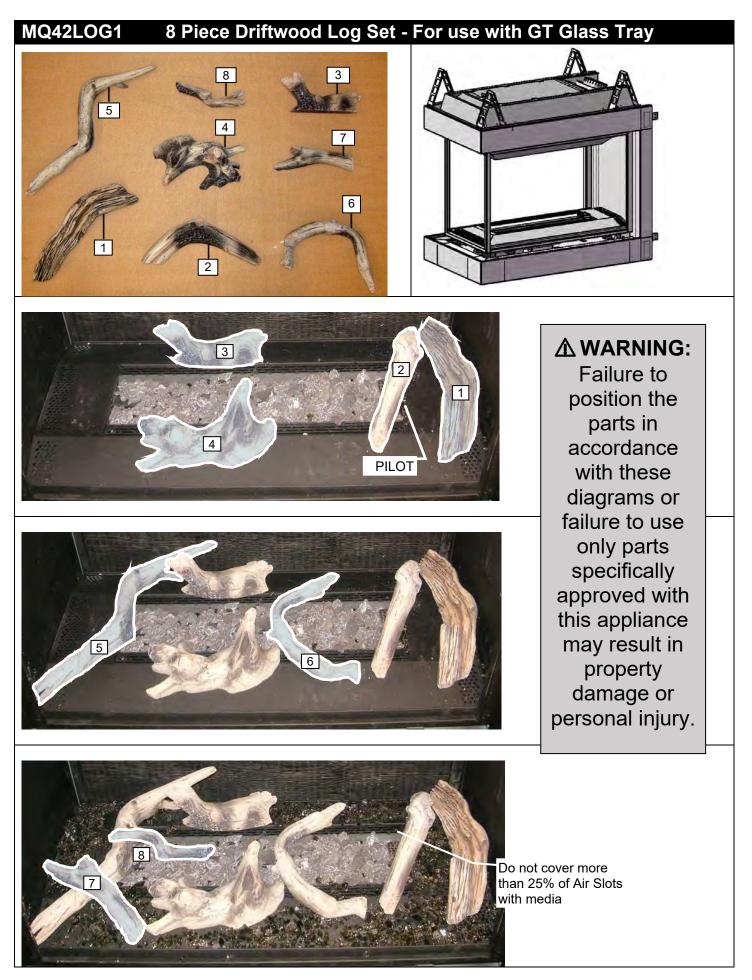

- 1. Remove screws holding Grate Assemblies in place.
- 2. Remove screws holding Grate Plate in place.
- 3. Remove from firebox.

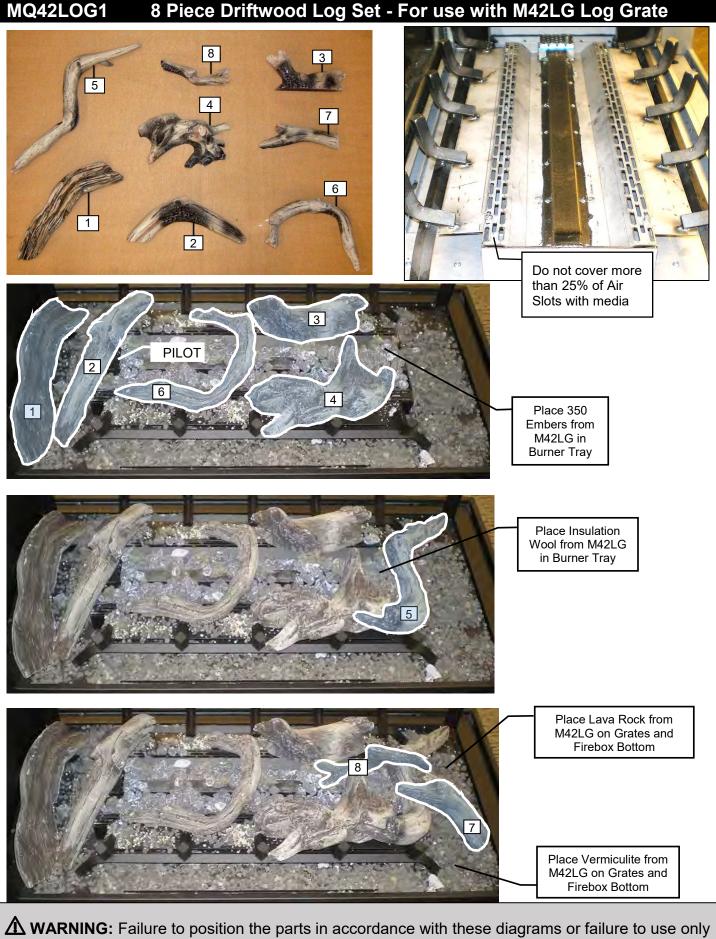

Use supplied media with:

- MQLOG1
- MQLOG2
- M42LOG4

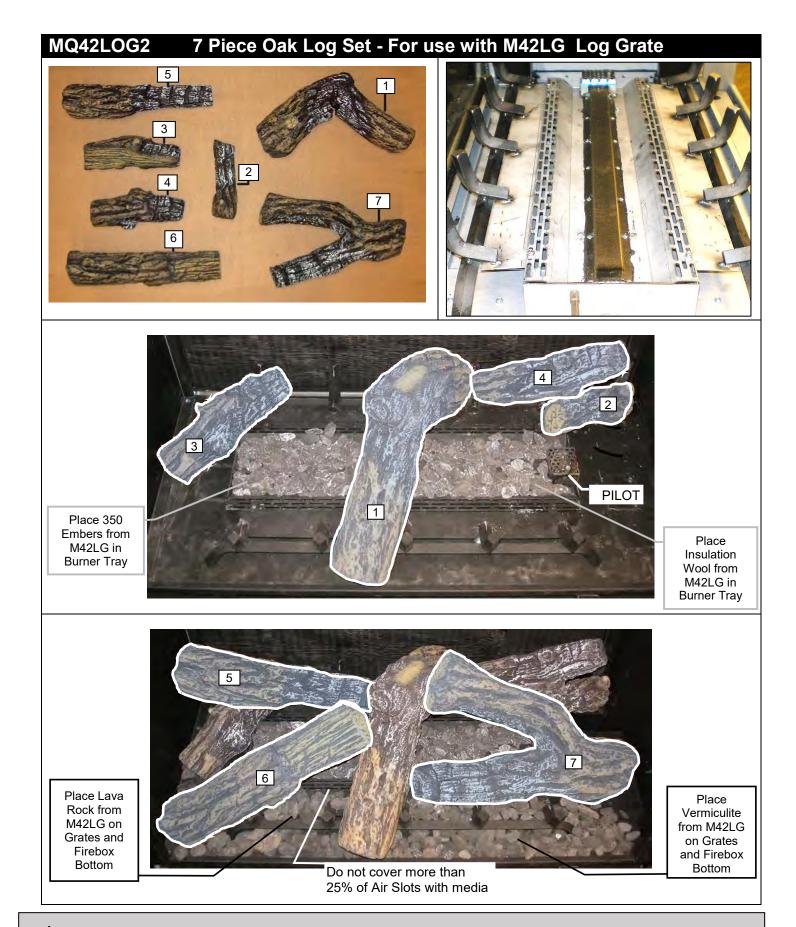

WARNING: Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

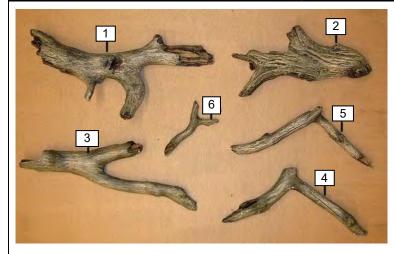

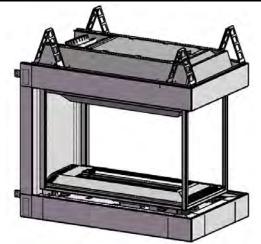

WARNING: Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

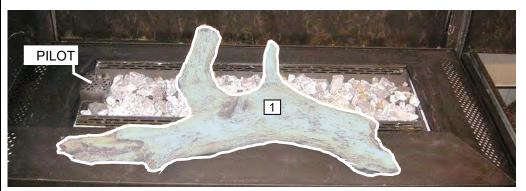

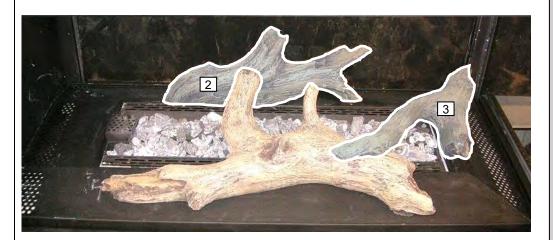

WARNING: Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

M42LOG3 6 Piece Driftwood Log Set - For use with GT Glass Tray

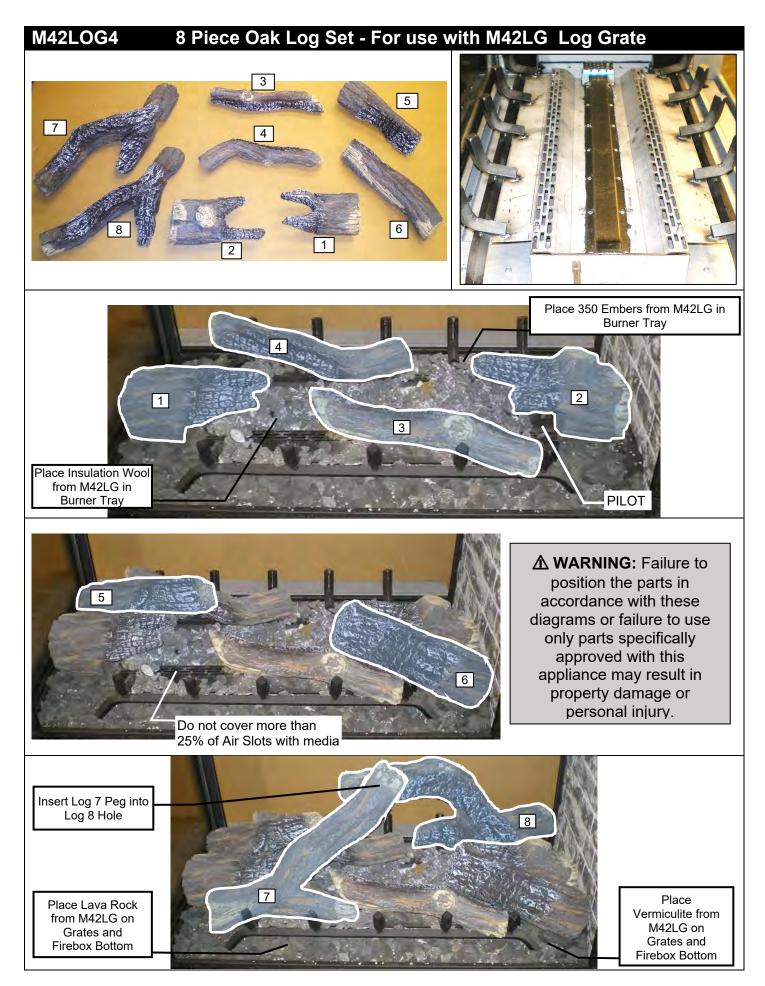

WARNING: Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

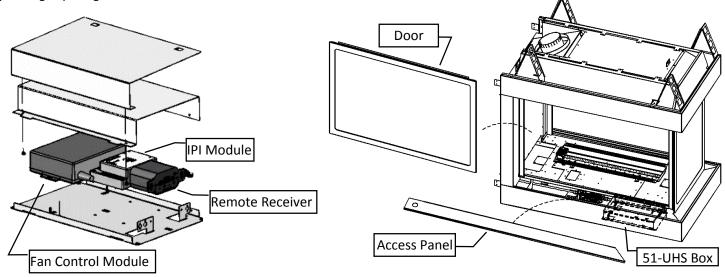

Do not cover more than 25% of Air Slots with media

51UHS Box

Included with base model.

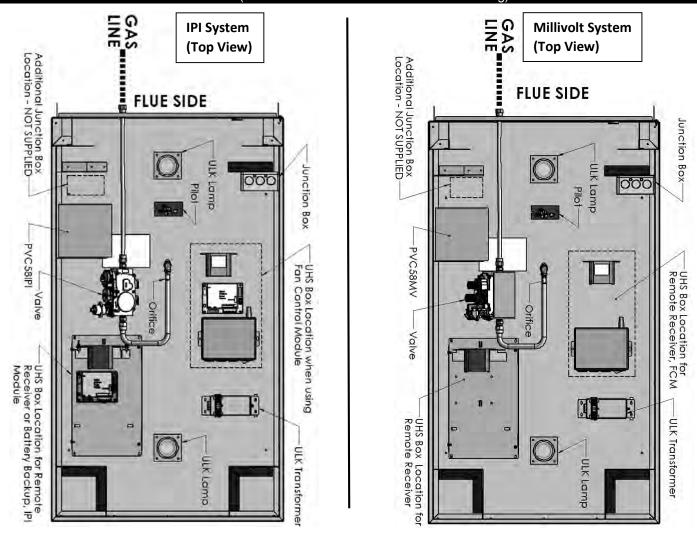

The 51-UHS Box is designed for millivolt and IPI units for in-unit installation of the Remote Receiver, Fan Control Module, and the IPI Module. 51-UHS Box can be inserted & removed from beneath fireplace through access panel opening (Remove glass door first). **NOTE: When using a remote control, the 51-UHS Box must be used.** Batteries for Remote Receiver can be changed by lifting 51-UHS up through opening.

51-UHS can be inserted & removed from beneath fireplace through access panel opening (Remove glass door first).

(See Each Section For Connections & Wiring)

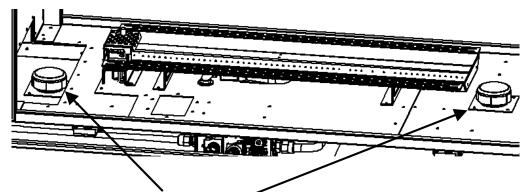

ULK3

Universal Light Kit (Optional Accent Lighting Kit) MCVP42 & MCVST42

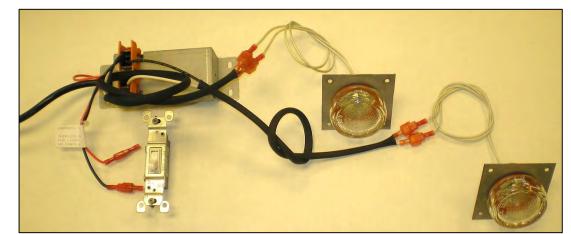

Please follow the current ANSI/NFPA 70 National Electrical Code in the USA and CAN/CSA C22.1 Canadian National Electrical Code in Canada.

INSTALLATION: Remove Glass Tray or Log Grates if installed. Refer to MP42GT, MST42GT or M42LG Installation / Removal.

STEP 1: Remove cover plates and install lamps in firebox. Seal with fresh sealant (Mill-Pac).

STEP 2: Connect lamp wires to jacketed transformer leads. Connect switch wires to black and red wires at transformer, or plug black and red transformer wires together if 120V receptacle will be switch controlled.

REFER TO COMPONENT LOCATIONS SECTION OF MANUAL FOR TRANSFORMER PLACEMENT.

Split Receptacle- Switch Control Outside of Fireplace

If you wish to have a control switch outside of the fireplace for one side of the receptacle and you require a constant source of AC power inside the unit for another accessory such as lights or an IPI valve system, follow one of the procedures below.

AWARNING AWARNING AWARNING

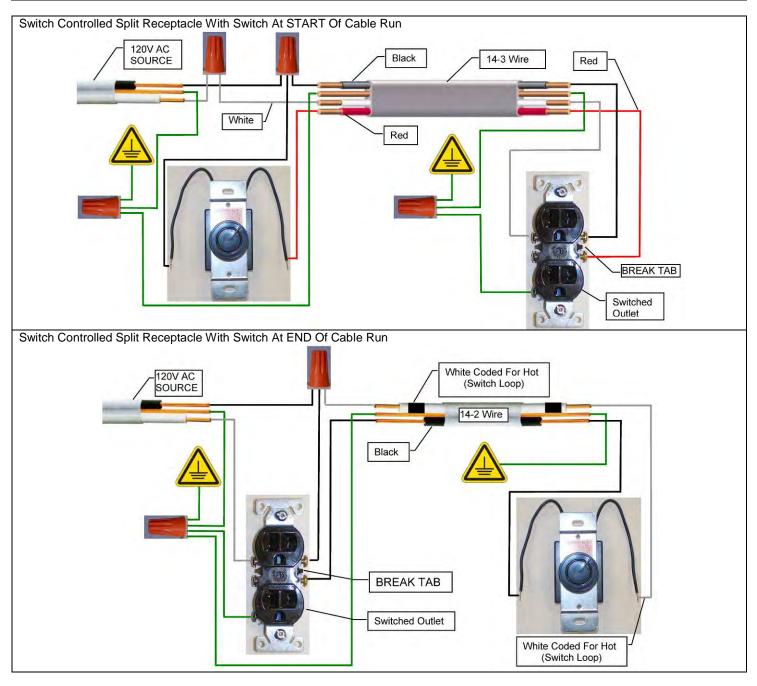

A qualified electrician must connect electrical wiring to junction outlet for built-in installation.

Follow all codes.

Electrical Grounding Instructions – This appliance is equipped with a three – pronged (grounding) plug for your protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle.

Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation and servicing.

Caution: Electrical installation to be done by a qualified installer. All wires must be connected and grounded in accordance with CSA Standard C22.1- Canadian Electrical Code part 1 or with the National Electrical Code, ANSI /NFPA 70 (latest edition) and /or in accordance with local codes.

RBCB1 -Cannonballs- Installation Instructions

*Must be used with MST42GT/ MP42GT Glass Tray

Assorted size and colors. Place randomly as desired inside fireplace.

Can be used with MQ Glass, MQ Ember, and / or Lava Rock. Do not place Cannonballs directly on burner ports. If sooting occurs change position of or remove affected objects.

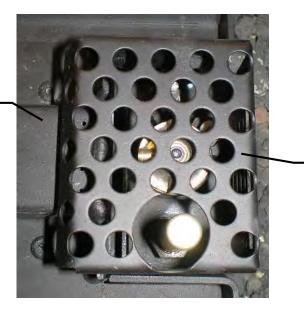

- MQ Glass can be placed directly on Burner and on Glass Tray.
- MQ Ember can be placed directly on Burner Only.
- Lava Rock (Supplied with Base Unit) CANNOT be placed on Burner. Place Lava Rock in channel in front of Glass Tray & on Glass Tray.

A NOTE

• Pilot Area Must <u>Not</u> Be Covered, as delayed ignition can occur.

• Do not place Cannonballs directly on burner ports.

*Pilot Shield should be visually inspected monthly for signs of deterioration due to flame exposure. Replace if necessary.

MQ Dealer Accessories for MCVST42 / MCVP42

The following Accessories are available through MQ Dealers only.

| ACCESSORY ITEM | DESCRIPTION |
|-------------------------|--------------------------------------|
| | |
| MQG5W* | Decorative Glass 1/2" White |
| MQG5A* | Decorative Ember Glass Cobalt Blue |
| MQG5B* | Decorative Ember Glass - Black |
| MQG5ZG* | Decorative Glass- Zircon Glacier Ice |
| NOTE: All glass is sold | l in 5 pound bags. |
| MQ42LOG2 | Driftwood Log Set- 8pcs. |
| MQROCK2* | Rock Set Natural |
| MQROCK3* | Rock Set Multi-Color |
| MQSTONE* | Decorative Stones |
| MQEMBER* | Glowing Embers |
| | |
| | |
| | |

GLASS (MQG5W, MQG5C, MQG5A, MQG5B, MQG5ZG)

If you wish to use this media evenly spread the glass embers onto the false bottom and burner. Ensure the glass embers do not excessively overlap as this will affect the flame pattern. Use care when placing glass embers near the pilot area so as not block or have the glass fall over the crossover holes from the pilot to the burner, as delayed ignition can occur.

The following types of glass are approved:

• 1/2" Ember Glass Material from American Fireglass. Maximum amount: 5lbs on Burner Tube and Burner Tray 15lbs on Glass Tray (20lbs Max. total)

• Liquid Glass from Firegear. Maximum amount: 5lbs on Burner Tube and Burner Tray 15lbs on Glass Tray (20lbs Max. total)

• Zircon Glacier Ice. Maximum amount: 10lbs on Burner Tube and Burner Tray 15lbs on Glass Tray (25lbs Max. total)

Use of any other glass can alter the performance of the unit and is not covered under warranty.

Discoloration of glass media may occur if placed on the burner, this is not covered under warranty.

- MQG5ZG Decorative Glass- Zircon Glacier Ice 10lbs on Burner Tube and Burner Tray- 15lbs on Glass Tray (25lbs Max. total)
- Must be used with MST42GT/ MP42GT Glass Tray

MQ STONE / MQ ROCK- Must be used with MST42GT/ MP42GT Glass Tray

The following Accessories are available through MQ Dealers only.

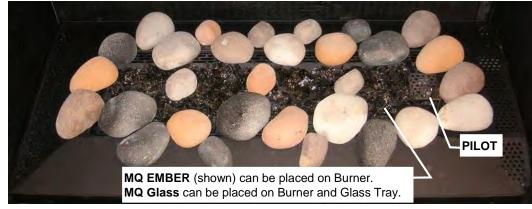

MQ STONE DECORATIVE STONE SET- Must be used with MST42GT/ MP42GT Glass Tray

- Place Stones onto False Bottom and Burner. Do not place directly on Pilot Area.
- Not all stones will be used on some installations.
- If sooting occurs change position of or remove affected objects.

MQ ROCK- Must be used with MST42GT/ MP42GT Glass

- Place Rocks onto False Bottom and Burner. Do not place directly on Pilot Area.
- Not all stones will be used on some installations.
- If sooting occurs change position of or remove affected objects.

• MQEMBER-

- To be placed directly on Burner and Burner Ports.
- Place these glowing ember chunks randomly.
- May be used with or without other accessories.

can occur.

*Pilot Shield should be visually inspected monthly for signs of deterioration due to flame exposure. Replace if necessary.

\Lambda ΝΟΤΕ

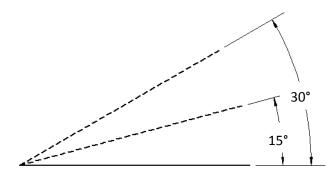

• Pilot Area Must <u>Not</u> Be Covered, as delayed ignition can occur.

ZCV39 / ZCV42 / MCVST42 / MCVP42 Door Installation

To install Door:

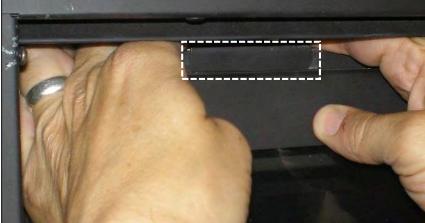

1. Remove Access Cover below Glass Door.

2. Engage door in lower latches at an angle of between 15 and 30 degrees.

3. Swing door up and pull top latches over door lip at each corner.

WARNING:

Wait until unit is <u>COMPLETELY</u> cool before touching glass or attempting to install or remove Glass Door.

4. Replace Access Cover below Glass Door.

Door and Glass Information MCVP42

Glass Cleaning

It will be necessary to clean the glass periodically. During startup, condensation, which is normal, forms on the inside of the glass, and causes dust, lint etc. to cling to the glass surface.

Also, initial paint curing can deposit a slight film on the glass. It is therefore recommended that initially the glass be cleaned two or three times with a fireplace glass cleaner. After that, the glass should be cleaned two or three times a season depending on the circumstances.

A Cautions and Warnings

- Do not clean when the glass is hot.
- The use of substitute glass will void all product warranties (see Glass Replacement in this section)
- Care must be taken to avoid breakage of the glass.
- Do not operate this fireplace without the glass front or with a broken glass front.
- Do not strike or abuse the glass.

Glass Replacement

MCVP42N, MCVP42NE, MCVP42LP, MCVP42LPE must use tempered glass. Must be 5mm thick.

Only Robax ceramic or coated Neoceram glass may be used for replacement for Models **MCVP42NH**, **MCVP42NHE**, **MCVP42LPH**, **and MCVP42LPHE**. Glass must be minimum 5mm thick.

To replace glass, clean all materials from the door frame. Scrape off old silicone all the way down to the metal. Using high-temp silicone [rated up to 500°F (260°C)] apply a continuous bead of approximately 1/8"-3/16" to all four [4] sides of the frame. With the frame resting on a flat surface, insert the new glass with a new gasket. Gently press the glass into the silicone. Be careful not to use excessive force on the glass. Let the silicone dry for approximately 15-20minutes.

Use caution when removing broken glass. Wear gloves.

Removal of Large Glass Doors

- 1. Remove the door by unlatching the 2 top latches. Simply place 2 fingers in the grooves, and pull and lift upward slightly.
- 2. Once the top of the door is unlatched, pull it outward and lower it to unlatch the bottom.
- 3. To re-install, place the Bottom Door Ledge into the 2 Lower Latch assemblies first. Then swing the door closed to seal it against the firebox cavity. Re-latch the Upper Latch assembly to secure the door to the appliance.

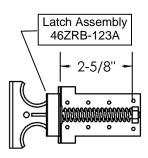

Spring Replacement

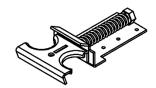

*Over time, the door latch spring (Part**# 33IDV-123**) may need to be replaced if tension is lost.

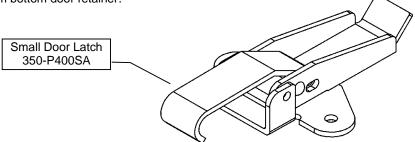

- 1. To replace latch spring, remove the 2 hex screws (located in the firebox) that secure the latch assembly in place.
- Once the screws are removed the latches will slide out of place.
- 3. Remove the locknut from the latch assembly and replace the spring. Re-tighten the locknut until 2 thread turns are beyond the locknut. This is critical for proper tension. Replace latch assembly.

- 1. Unlatch the two latches.
- 2. To remove, pull frame forward and lift from bottom door retainer.

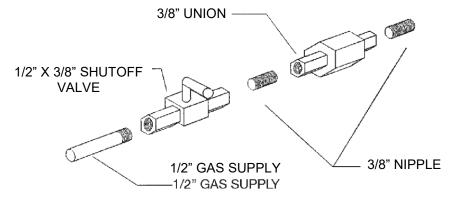

Gas Line Installation

This gas appliance should be installed by a qualified installer in accordance with local building codes and with current CAN/CGA - B149.1 or .2 installation codes for Gas Burning appliances and equipment in Canada and the National Fuel Gas Code ANSI Z223 in the U.S.A.

1. The gas pipeline can be brought in through either the right or the left side of the appliance. A knockout is provided at either location to allow for the gas pipe installation and testing of any gas connection.

 The gas control inlet is 3/8" NPT. Typical installation layout for rigid pipe is shown at right.
 When using copper or flex connector, use only approved fittings. Always provide a union so that gas line can be easily disconnected for burner or fan servicing. See gas specification for pressure details and ratings.

4. When a vertical section of gas pipe is required for the installation, a condensation trap is needed. See CAN/CGA-B149.1 or .2 for code details.

5. For natural gas, a minimum of 3/8" iron pipe with gas minimum pressure of 4.5" w.c. must be used for supply from the gas meter. Consult with the local gas utility if any questions arise concerning pipe sizes.

6. A 1/8" NPT plugged tappings are accessible for test gauge connection both on the inlet and outlet of the gas valve.

7. Turn the gas supply ON and check for leaks. DO NOT USE OPEN FLAME FOR THIS PURPOSE. Use an approved leak testing solution.

8. The appliance and its individual shutoff valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2 PSIG (3.5 KPa).

9. The appliance must be isolated from the gas supply piping system by closing its individual shutoff valve during any pressure testing of the gas sup- ply piping system at test pressures equal to or less than 1/2 PSIG (3.5 KPa).

NOTE: The gas line connection may be made of 1/2" rigid pipe or an **Approved Kingsman Flex Connector, such as FP15GC**. Since some municipalities have additional local codes, it is always best to consult your local authorities and the current CAN/CGA -B149.1 or .2 installation code in Canada or the National Fuel Gas code ANSI Z223.1 in the U.S.A

For the state of Massachusetts a <u>T-handle gas</u> <u>shut-off valve</u> must be used on a gas appliance. This T-handle gas shut-off valve must be listed and approved by the state of Massachusetts. This is in reference to the state of Massachusetts state code CMR238.

Important: Always check for gas leaks with a soap and water solution. Do not use open flame for leak testing.

Millivolt System, Lighting, and Burner Control

| | FOR YOUR SAFETY READ BEFORE LIGHTING | | | | |
|--|---|----------|---|--|--|
| <u>^</u> | WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life. | | | | |
| | BEFOF | RE LIG | GHTING | | |
| A | This appliance has a pilot which must be lighted by hand. When lighting the pilot, follow these instructions exactly. | • | Immediately call your gas supplier from a neighbour's phone. Follow the gas supplier's instructions. | | |
| В | Smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on | • | If you cannot reach your gas supplier, call the fire department. | | |
| | the floor. | С | Use only your hand to push or turn the gas control knob. Never use | | |
| wн | IAT TO DO IF YOU SMELL GAS | | tools. If the knob will not push in or turn by hand, don't try to repair it. Call a qualified technician. Force or attempted repair may result in a fire or explosion. | | |
| • | Do not try to light an appliance. | | | | |
| • | Do not touch any electrical switch; do not use any phone in your building. | D | Do not use the appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system which has been under water. | | |
| | LIGHTING | INST | RUCTIONS | | |
| 1. 2. 3. 4. 5. 6. 7. 8. | Stop! Read the safety information above this label. Set the thermostat to lowest setting. Turn off all electrical power to the appliance. Locate valve under the burner assembly. If the control knob is not already in the off position, i.e. the word "OFF" in the 9 o'clock position, then push in the gas control knob slightly and turn O clockwise to "OFF". NOTE: Knob cannot be turned from "PILOT" to "OFF" unless knob is pushed in slightly. Do not use force. Wait five [5] minutes to clear out any gas. If you then smell gas. STOP! Follow "B" in the safety information above on this label. If you don't smell gas then go to the next step. Now push in the control knob slightly and turn O counter-clockwise to the "PILOT" position. Push in the control knob all the way and hold it. With the other hand push in the red igniter button until you hear a click. Now observe closely the pilot burner located on the rear center-left | 11. | If a flame has appeared then continue to depress the control knob for 20 seconds. If the flame did not appear then continue to depress the red igniter button every 5 seconds until a flame is established. NOTE: If after 30 seconds a flame has not yet been established then turn the control knob back to the off position and repeat steps 5, 6 & 7. Once the pilot has been established hold the control knob in the depressed position for approximately 25 seconds before releasing. If the flame goes out then repeat steps 7 and 8. If the knob does not pop up when released, stop and immediately call your service technician or gas supplier. If the pilot will not stay lit after several tries, turn the gas control to "OFF" and call your service technician. Now turn the control knob to the "ON" position. The burner will not light unless the wall switch thermostat or remote control is turned "ON" or in the case of the thermostat there is a call for heat. Close the access door and turn all electrical power back to the appliance. | | |
| | hand side of the main burner. | | The pilot must be turned off when the unit is not in use. | | |
| 1 | Set the thermostat to lowest setting. | | E APPLIANCE Push in the gas control knob slightly and turn ひ clockwise to the "OFF" | | |
| 1. 2. | Turn off all electric power to the appliance if service is to be performed. | 4. 5. | position. Do not force. Replace control access panel. | | |
| 3. | Open the control access door. | | , ····· | | |

NOTE: Only one on/off device (manual on/off, remote control, or hard wired thermostat) should be connected to the appliance at any one time, this is most important when installing an insert or stove as the on/off rocker switch is installed at the factory.

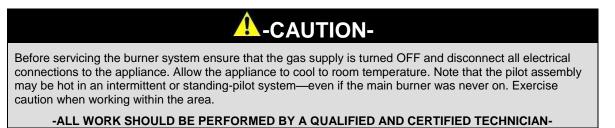

8. Check all accessible gas-carrying tubes, connections, pipes and other components for leaks.

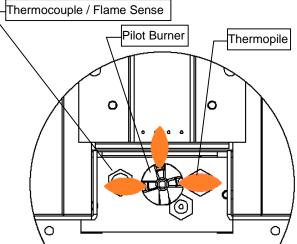

Burner System Maintenance- MCVST42 / MCVP42

It is recommended to annually inspect and clean the Burner System to prevent malfunction and / or sooting. This operation should be performed by your dealer or a qualified technician.

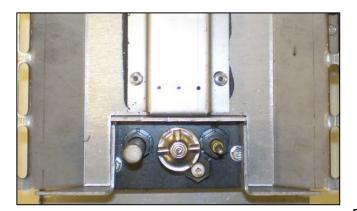

Monthly Flame Inspection

It is recommended to turn on the unit at least once a month and inspect the flame pattern to ensure there are no problems with the burner tube (Flame should appear similar to the above picture).

The pilot flame should also be inspected monthly to ensure proper operation.

Pilot Must Maintain This Relationship With Burner.

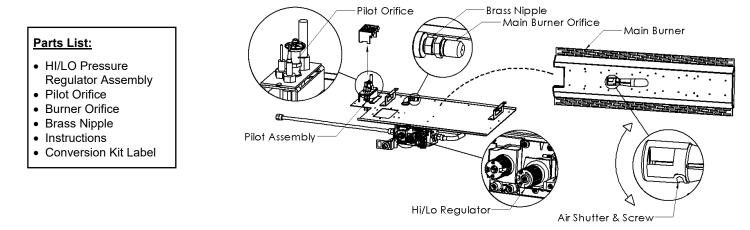

Pilot Shield Area Must Not Be Covered With Media.

*Pilot Shield should be visually inspected monthly for signs of deterioration due to flame exposure. Replace if necessary.

Gas Conversion Part A MCVP42

Models: MCVP42N, MCVP42NE, MCVP42NE2, MCVP42LP, MCVP42LPE, MCVP42LPE2, MCVP42NH, MCVP42NHE, MCVP42NHE2, MCVP42LPH, MCVP42LPHE2

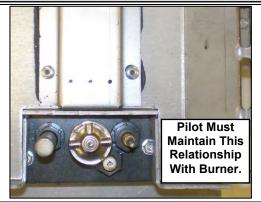

| Kit Number | Description | Pilot Orifice | Burner Orifice Brass (1000-255) | Brass Nipple | Air Shutter | Hi/Lo Regulator |

| | -IPI- | #62 (977.166) | | Closed | | (907.013) |
| IMPORTANT | : Always check for gas | leaks with a soap a | and water solution. D | O NOT USE OPEN | FLAME FOR I | EAK TESTING. |

Caution:

The gas supply shall be shut off prior to disconnecting the electrical power, before proceeding with the conversion.

- 1. The Burner Tube must be removed from the Burner Pan Assembly (See **Burner Tube Removal**). Adjust the Air Shutter to the correct Primary Air setting as specified in the manual or on the label plate. To adjust the Primary Air setting, loosen screw on the side of the Air Shutter and rotate to the correct opening using a drill bit or tape measure. Retighten screw.
- 2.Remove the Main Orifice using a ¹/₂" wrench and replace with the new Conversion Orifice which came with the Conversion Kit.
- 3. Replace the Burner Tube. Install the new Pilot Orifice (See **Pilot Conversion**) and Hi/Lo valve regulator by following instructions supplied with the Conversion Kit.

Refer to "Gas Specifications Chart" for inlet pressures and input ratings. Clock meter to verify input rate. Place conversion label as close to converted gas control as possible. Refer to lighting instructions to verify the normal operating sequence of the ignition system.

\land - WARNING -

This conversion kit shall be installed by a qualified service agency in accordance with the manufacturer's instructions and all applicable codes and requirements of the authority having jurisdiction. If the information in these instructions is not followed exactly, a fire, explosion or production of carbon monoxide may result causing property damage, personal injury or loss of life. The qualified service agency is responsible for the proper installation of this kit. The installation is not proper and complete until the operation of the converted appliance is checked as specified in the manufacturer's instructions supplied with the kit.

Gas Conversion for Top Convertible Pilot – Part B (series 0190XYZ)

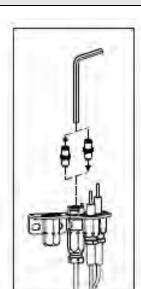

Instructions for converting SIT 190 series pilot burner injector from NG to PROPANE and from PROPANE to NG only. This information should be considered as supplemental to the Appliance Manufacturer's Instructions.

WARNING! The installation of this conversion kit must only be undertaken by a qualified and certified gas appliance installer.

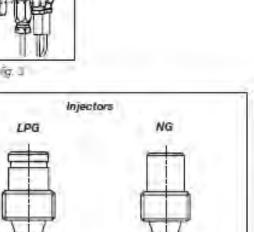

- 1. Shut-off the gas supply to the appliance.
- 2. Allow the pilot burner to cool to room temperature.

WARNING: Touching a hot pilot burner can result in injury.

- 3. The pilot hood is held in place by spring. First remove the spring, then remove the hood by pulling it up from the pilot bracket (fig. 1).
- 4. Insert a 5/32" or 4 mm Allen wrench into the hexagonal key-way of the injector (fig. 2), and rotate it counter-clockwise until it is free of the injector journal.
- 5. Verify that the new injector is proper for the application. The injector size is stamped on the side of the injector near the top. Propane injectors have a groove machined around their circumference near the top, while NG injectors do not have a groove (fig. 4). Refer to the Appliance Manufacturer's instruction sheet for the proper injector size.
- Insert the Allen wrench into the end of the injector. Then, insert the injector into injector journal, and rotate the injector clockwise until a torque of 9 lbf in (1.0 Nm) is achieved.
- 7. First replace the pilot hood by aligning the tab on the base of the hood with the slot in the side of the pilot journal, and push the hood down, onto the pilot bracket (fig. 3). The hood must sit squarely on the bracket for proper operation. Then replace the spring by pushing it on his seat (fig.3). Check to insure that the hood is properly seated onto the pilot bracket and that the spring is properly inserted onto his seat.
- 8. Restore the gas supply to the appliance, and ignite the pilot burner. Verify proper ignition and operation.

hp.

WARNING!

This conversion kit must ONLY be applied as part of a conversion kit supplied by the APPLIANCE MANUFACTURER for the specific appliance, and type of gas, being converted.

SII GROUP

44

Gas Conversion for Modulator – PART C

installationinstructions

820 NOVA mV

Modulating Conversion Kit

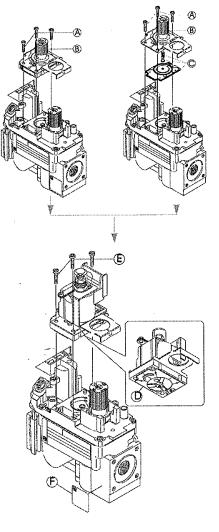

Warningi

.252.136

The installation of this conversion kit must only be undertaken by a qualified and certified gas appliance installer.

MODULATING PRESSURE REGULATOR CONVERSION KIT INSTALLATION OR REPLACEMENT INSTRUCTIONS.

- **1** Turn control knob to the OFF position, and shut off the gas supply to the valve.
- 2 Using a Torx T20, or slotted screwdriver, remove and discard the three pressure regulator mounting screws (A), pressure regulator tower (B), and the spring and diaphragm assembly (C). (If applicable)
- Insure that the rubber gasket (D) is properly positioned and install the new modulating pressure regulator assembly to the valve using the new screws (E) supplied with the kit. Tighten screws securely. (Reference torque = 25 In.Lb.)
- 4 Install the enclosed identification label (F) to the valve body where it can be easily seen.
- **5** Apply gas to system and re-light appliance according to manufacturers instructions.
- 6 With the main burner "ON", test the new pressure regulator assembly for leaks using a soap solution.
- 7 Relight the main burner in both the HI and LO positions, and verify proper burner ignition and operation.

Warming

This modulating conversion kit must ONLY be applied as part of a conversion kit supplied by the APPLIANCE MANUFACTURER for the specific appliance, and type of gas, being converted.

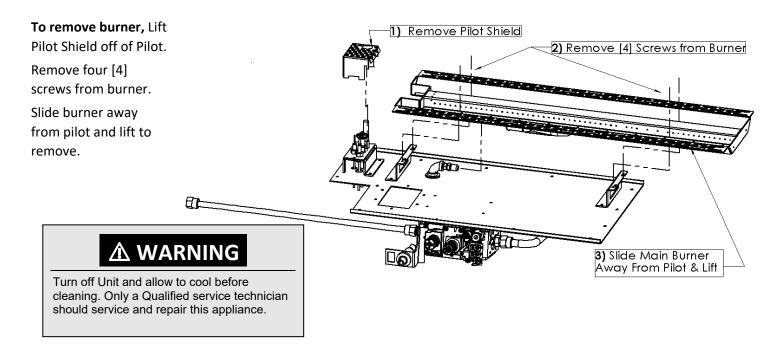

INSTALLER NOTICE. These instructions must be left with appliance.

MCVST42 / MCVP42

Main Burner Removal

If Glass Tray or Log Grates are installed, refer to MCVST42GT or MCVST42LG Installation / Removal page in this manual.

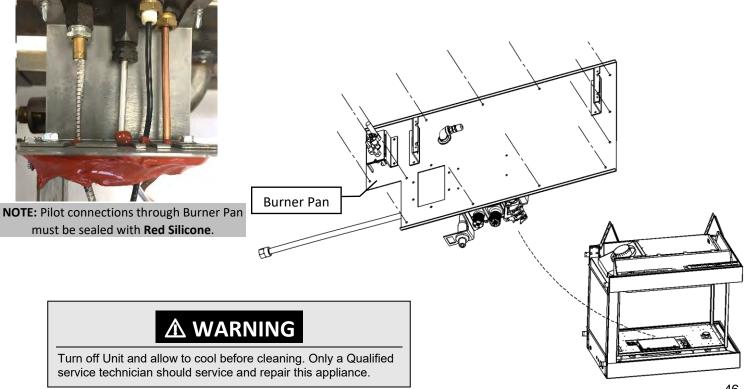

MCVP42

Burner System Removal / Installation

Removal: If Glass Tray or Log Grates are installed, refer to *MCVP42GT or MCV42LG Installation / Removal* page in this manual. Then refer to *Burner Removal* instructions above to remove burner.

Remove fourteen [14] screws around edge of Burner Pan. Carefully work the burner pan loose & lift the assembly upward to remove it from the firebox cavity.

Installation is the reverse of these steps. Ensure that the mounting surface is clean. Use fresh **Black Mill Pac** to reseal the burner pan.

IPI Electronic Ignition System

Overview

The IPI system is an advanced burner controller that provides you with the option of having either a Standing-Pilot, or an intermittent igniting system. This alternating mode is controlled by the CPI/IPI Switch (Continuous Pilot Ignition/Intermittent Pilot Ignition) located on the IPI System Box. The difference between a Standing-Pilot and an Intermittent-Pilot is in whether the pilot stays lit or shuts off:

In Standing-Pilot, the pilot assembly is lit by the IPI Main Module and continues to stay lit until 1) the CPI/IPI Switch is switched to the IPI position; 2) a loss of electrical power (battery and AC source), 3) the flame sensor loses its signal, 4) the fuel supply discontinues, or 5) the IPI Main Module malfunctions.

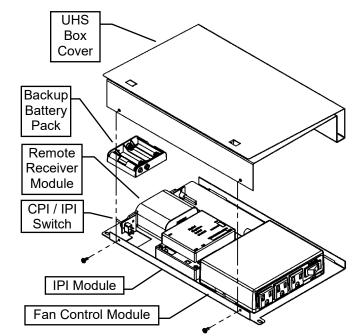

In the Intermittent-Pilot mode, the pilot shuts off when the appliance is not in use. The advantage of this mode is that fuel is not consumed when the fireplace is not operating.

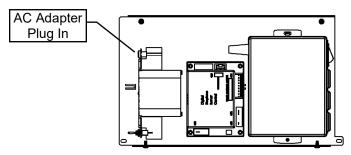

NOTE: In some jurisdictions Intermittent-Pilot is required. That means the pilot cannot remain lit when the appliance is not operating.

Components

The core of the IPI system is the Main Module and the IPI Valve. With these two components the system is able to operate a gas fireplace. There are also other components available to complement the IPI system.

<u>IPI System Cover</u>: Is essential in keeping the components at their proper operating temperatures. **DO NOT OPERATE THE APPLIANCE WITHOUT THIS COVER.**

<u>Modulating Servo Motor</u>: Is an add-on valve component that permits HI/LO functionality to be controlled by the remote. Contrary to this feature is a Manual HI/LO Control Knob. The Modulating Servo Motor requires the Remote system to be present.

<u>Backup Battery Pack</u>: This component permits the IPI system to operate without the need for an external AC Adapter power source. The advantage to using the battery backup is that in the case of a power failure, the appliance is still operable.

NOTE: In certain instances the IPI Main Module requires resetting. This can occur if the system is unable to ignite the pilot or the main burner in the allotted time period. The IPI is programmed to lockout all commands. To reset this lockout you must deplete the system of all electrical power. This means to remove the batteries from the Battery Pack, remove the batteries from the Remote Receiver (if applicable), and disconnect the AC Adapter from the system. Leave the power off for approximately 25 seconds to clear its lockout.

Remote Receiver: This component provides the capability of controlling the appliance with a wireless remote transmitter.

Standing Pilot Mode for Colder Climates (Below Freezing)

For IPI models it may be necessary to set the appliance to Standing Pilot mode to maintain heat in the cavity. The purpose of this procedure is to prevent cold air from penetrating the chimney and then onto the living space. Therefore, when the internal temperature is slightly elevated the fireplace is able to freely exhaust its combustion and hence making it easier to startup.

NOTE: The pilot system for this appliance may be equipped with a Seven Day Timer, in which case the pilot flame will be extinguished if the main burner has not been turned ON for seven days. This Seven Day Cycle is reset every time the main burner is cycled ON / OFF and the pilot remains lit. If more than seven days has passed since the main burner has been cycled ON / OFF and the pilot is also out, follow the procedures described in this manual to light the pilot.

Proflame 1 - Remote Control Operation-

The Proflame GTM is configured to control the on/off main burner operation, its flame levels, and provides on/off and Smart *thermostatic control of the appliance.

Transmitter

The Transmitter is powered by 3 AAA type batteries. A Mode Key is provided to Index between the features and a *thermostat Key is used to turn on/off or index through *thermostat functions

Remote Receiver

The Receiver connects directly to the gas valve and stepper motor with a wiring harness. The Receiver is powered by 4 AA type batteries. The Receiver three position slider switch can be set to one of three positions: ON (Manual Override), Remote (Remote control) or Off.

Initializing the System for the first time

Install 4 AA batteries into the receiver battery bay. Install 3 AAA type batteries in the Transmitter battery bay. Place the 3 position slider switch in the "Remote" position. Insert the end of a paper clip into the hole marked "PRG" on the Receiver front cover. The Receiver will "beep" three (3) times to indicate that it is ready to synchronize with a Transmitter. Push the On button. The Receiver will "beep" four times to indicate the Transmitter's command is accepted. The system is now initialized.

Temperature indication Display

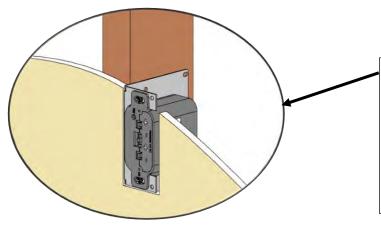

With the system in the "OFF" position, press the *thermostat Key and the Mode Key at the same time. Look at the LCD screen on the Transmitter to verify that a C or F is visible to the right of the Room Temperature display.

Turn the Appliance On or Off

Press the ON/OFF Key on the Transmitter

Remote Flame Control

The Proflame GTM has six (6) flame levels. Pressing the Down Arrow Key once will reduce the flame height by one step until the flame is turned off. The Up Arrow Key will increase the flame height each time it is pressed. If the Up Arrow Key is pressed while the system is on but the flame is off, the flame will come on in the high position.

Remote Receiver

Room *thermostat (Transmitter Operation)

The Remote Control can operate as a room *thermostat. To activate this function, press the *thermostat Key. The LCD display on the Transmitter will change to show that the room *thermostat is "ON" and the set temperature is now displayed. To adjust the set temperature, press the Up or Down Arrow Keys until the desired set temperature is displayed on the LCD screen of the Transmitter.

Smart *thermostat (Transmitter Operation)

The Smart *thermostat function adjusts the flame height in accordance to the difference between the set point temperature and the actual room temperatures. As the room temperature gets closer to the set point the Smart Function will modulate the flame down. To activate this function, press the *thermostat Key until the word "SMART" appears to the right of the temperature bulb graphic. To adjust the set temperature, press the Up or Down arrow Keys until the desired set point temperature is displayed.

Key Lock Function

This function will lock the keys to avoid unsupervised operation. To activate this function, press the MODE and the UP Arrow Key at the same time. To de-activate this function, press the MODE and the UP Arrow Key at the same time.

Low Battery Detection

Transmitter - When the Transmitter batteries are low, a Battery Icon will appear on the LCD display of the Transmitter. **Receiver -** When the Receiver batteries are low, No "beep" will be emitted from the Receiver when it receives an On/Off command from the Transmitter. When the batteries are replaced the "beep" will be emitted from the Receiver when the ON/OFF Key is pressed (See Initializing the System for the first time).

Manual Bypass Of The Remote System

If the batteries of the Receiver or Transmitter are low or depleted, the appliance can be turned on manually by sliding the three position slider switch on the Receiver to the ON position. This will bypass the remote control feature and the appliance main burner will come on if the gas valve is in the "On" position.

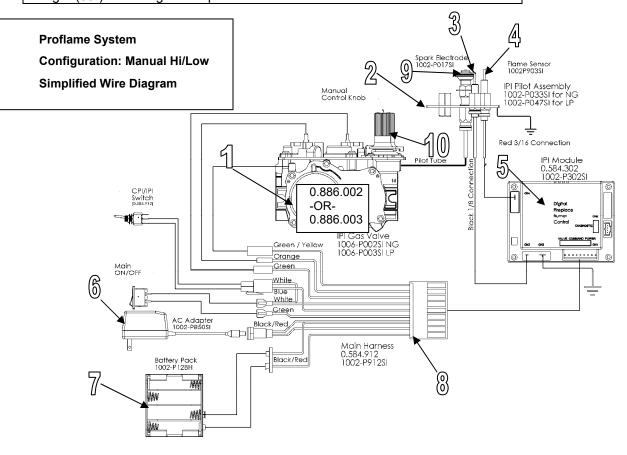

Wall Mount Option

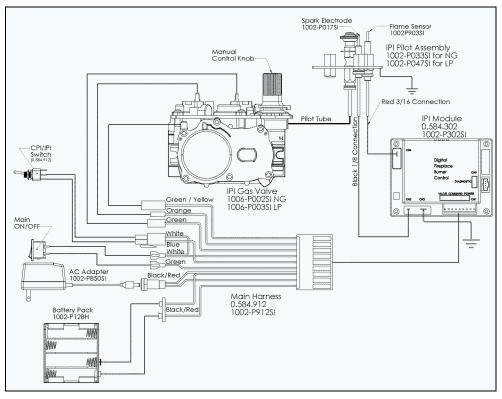

10ft. Extension Harness (Part No. 1001-P904SI) required.

- The Remote Receiver can be mounted on a vertical wall stud using the DCHS as a mounting bracket.
- Ensure that the face is protruding 1/2" so that the face plate will be flush on the face of the wall.
- Drywall cutout size is 2" wide by 4-1/8" tall.
- Must be installed within 10ft of valve assembly (6ft recommended).

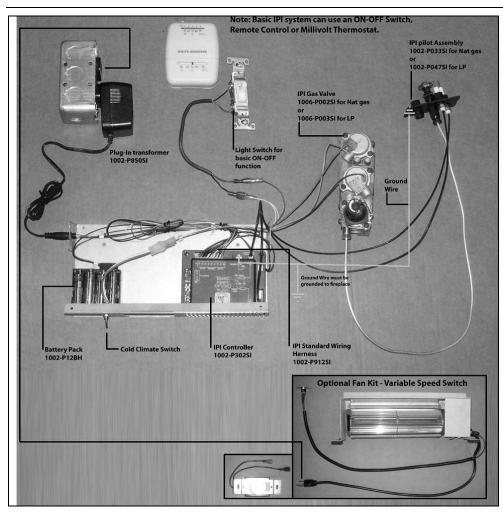

IPI Electronic Ignition Parts List – Standard System

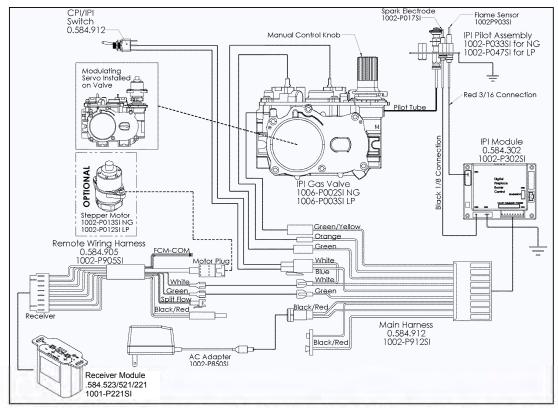

| ITEM NO. | PART NO. | DESCRIPTION |
|-----------|-----------------------------------|---|
| 1 | 1006-P002si | Valve IPI Hi/Lo NG |
| | 1006-P003si | Valve IPI Hi/Lo LP |
| 2 | *1002-P047si | Pilot Assembly-LP -24" Wire |
| | *1002-P033si | Pilot Assembly-NG -24" Wire |
| 3 | 1002-P017si | Spark Electrode (with wire) |
| | *1002-P119si | Spark Electrode (with wire- 35" Length) |
| 4 | 1002-P903si | Electrode Flame Sensor |
| | *1002-P910si | Electrode Flame Sensor (35" Length) |
| 5 | 1002-P302si | IPI Ignition Board |
| 6 | 1002-P850si | AC Wall Adapter |
| 7 | 1002-P12BH | Battery Pack |
| 8 | 1002-P912si | Wiring Harness |
| 9 | 1001-P166si | Orifice Pilot -NG#62 |
| | 1001-P168si | Orifice Pilot -LP#35 |
| 10 | 1002-P013si | Stepper Motor -NG |
| | 1002-P012si | Stepper Motor -LP |
| | 1002-P016si | Hi/Lo Regulator -NG |
| | 1002-P014si | Hi/Lo Regulator -LP |
| *Models Z | RB46E / MQRB4436E / MQR | 35143E / MQRB6961E |
| Longer (3 | 5") Wire length is required for t | hese units. |

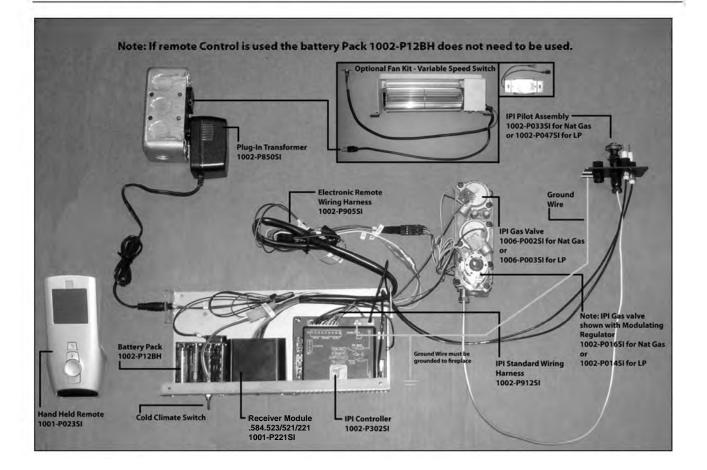

Configuration #1: Basic manual HI/LO and manual ON/OFF capabilities.

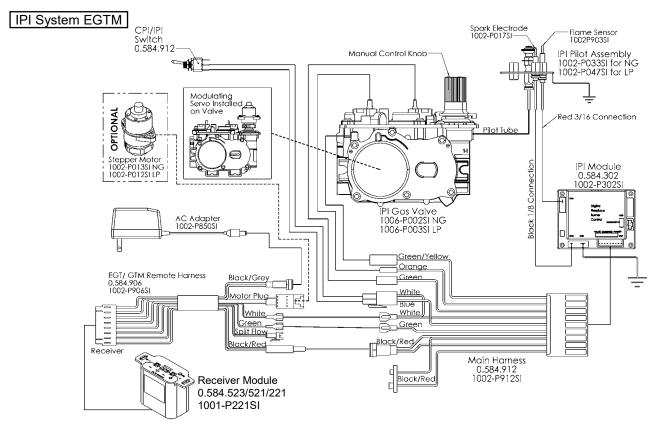

Configuration #2: Remote ON/OFF and manual HI/LO capabilities. OPTIONAL: For units with remote HI/LO capabilities, a modulating servo is required to be installed on the valve. The connectors to this servo must be connected to the Remote Harness as shown in the figure above.

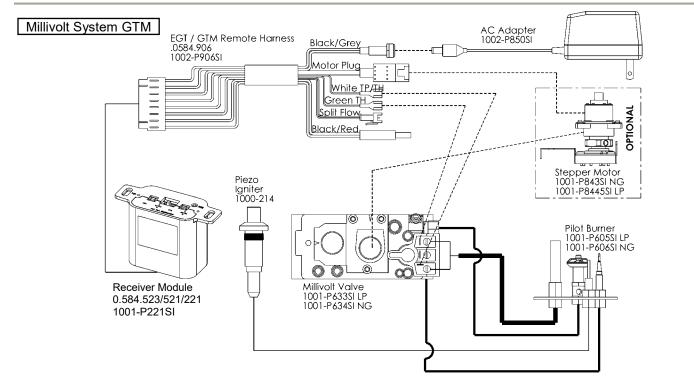

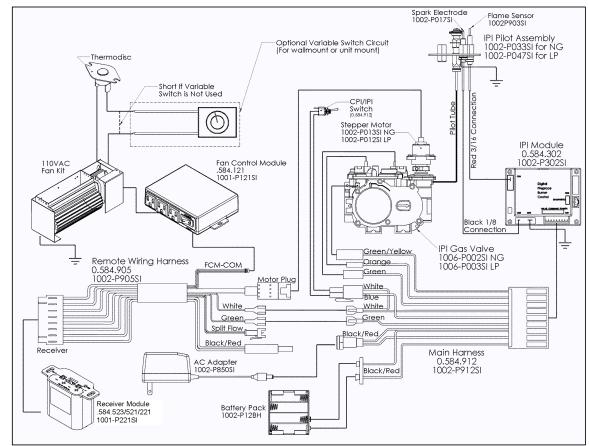

Operating the Receiver Without Batteries For GT / EGT / GTM / EGTM Remote Controls

-Wiring Harness P/N 1002-P906si required for both IPI & Millivolt systems. -Millivolt Systems will also require Power Adapter P/N 1002-P850si.

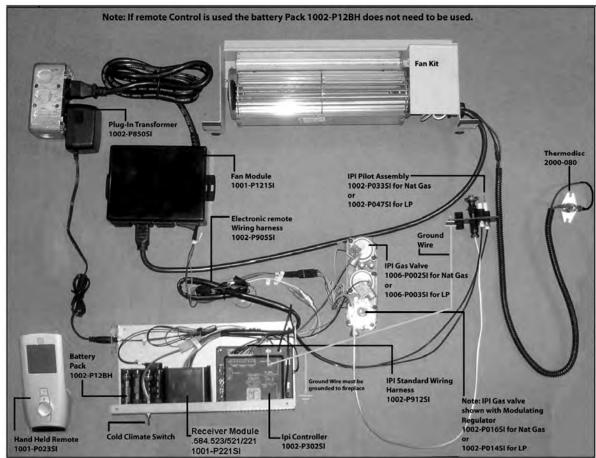

The Remote Receiver & IPI or Millivolt system can be powered by the AC Adapter. This is advantageous if you do not want to use batteries. Simply connect the AC Adapter into the Remote Control Wiring Harness as per the diagrams below.

Configuration #3: Remote ON/OFF, variable HI/LO, and fan capabilities. Refer to the fan installation/removal section for fan installation.

FOR YOUR SAFETY READ BEFORE LIGHTING WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life. Always light the pilot whether for the first time or if the gas supply has run out with the glass door opened or removed. **BEFORE LIGHTING:** This appliance is equipped with an ignition device which Α. If you cannot reach your gas supplier, call the fire automatically lights the pilot. Do not try to light the pilot department. by hand. Do not use this appliance if any part has been under C. **BEFORE OPERATING** smell around the appliance Β. water. Immediately call a gualified service technician area for gas. Be sure to smell next to the floor because to inspect the appliance and replace any part of the some gas is heavier than air and will settle on the floor. control system and any gas control which has been under water. WHAT TO DO IF YOU SMELL GAS Do not try to light any appliance. If the gas valve requires repair, call a qualified service D. Do not touch any electric switch; do not use any phone ٠ technician. Force or attempted repair may result in a in your building. fire or explosion. Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions. **OPERATING INSTRUCTIONS** Stop! Read the safety information above on this label. Turn manual shutoff valve clockwise to off 1. 6. (Located behind the access panel). Remove batteries from receiver, and/or Battery Backup 2. Pack. 7. Wait five (5) minutes to clear out any gas. Then smell for gas, including near the floor. If you smell gas, Turn off all electric power to the appliance. 3. STOP! Follow "B" in the safety information above this label. If you do not smell gas, go to next step. This appliance is equipped with an ignition device which 4.

- Turn manual shutoff valve counter-clockwise 8. ר to on.
- 9. Close the glass door.
- 10. Turn on all electric power to the fireplace and re-install batteries into the Transmitter/Receiver, and/or Battery Backup Pack.
- 11. Turn "On" Switch that operates the Main Burner. If using a Remote Control refer to Remote Control Operation Manual for activation.
- 12. If the appliance will not operate, follow the instructions "To Turn Off Gas To Appliance" and call your service technician or gas supplier.

TO TURN OFF GAS TO APPLIANCE

Turn off all electric power to the fireplace if service is to 1. be performed, including removing batteries from Remote Transmitter/Receiver and/or Battery Backup Pack.

automatically lights the pilot. Do not try to light the pilot

2. Remove control access panel.

by hand.

door.

5.

Open the glass

Gas

inlet

- Turn manual shutoff valve clockwise
 to off
 - (Located behind the access panel). If alternate shut-off valve was installed it can be shut off instead of going through the fireplace to access the fireplace shutoff valve.
 - Replace control access panel. 4.

Proflame 2 IFC Module and Remote Control

Pairing Remote Control:

- Install the 3 AAA type batteries in the battery bay, located on the base of the Remote Control. Note polarity of the batteries and insert them as indicated.
- Connect the AC power supply to the IFC Module.
- Press the SW1 button on the IFC Module so the IFC will "beep" and a red LED is illuminated to indicate that the IFC Module is ready to synchronize with a Remote Control within 10 seconds. With the batteries already installed in the Remote Control, push the ON button. The receiver will "beep" four times to indicate the Remote Control's command is accepted.

The system is now initialized.

Resetting Proflame 2 IFC Module for Manual Use

If the transmitter gets misplaced, is broken, or is no longer wanted the PF2 Module can be reset to a manual system. A manual on/off switch or thermostat may be installed at the X4 connector (this connection is Jumped at the factory) no power is required.

The following sequence must be followed to reset the PF2 Module:

• Press the Red SW1 button until you hear three beeps.

- Within 10 seconds press the **SW1** button again until you hear it beep.
- The PF2 Module may now be turned on/off manually (x4 connector) by a switch (not supplied), the pilot will remain on CPI (continuous pilot ignition) mode, all other functions of main burner, fan and lights will be on the high setting.

Fan Startup and Shutdown Timings:

Fan setting is started with a delay of 5 minutes from the fireplace ignition and stopped with a delay of 12 minutes from the fireplace switching off.

Low Battery Power Detection

When the Remote Control's batteries are low, a Battery lcon will appear on the LCD display before all power is lost. When the batteries are replaced this icon will disappear.

Battery Backup

The PF2 module is powered by line voltage (AC) with provision of battery backup in case of main power loss. Fans and lighting features will not function with the PF2 Module is powered by battery backup. It is recommended that the 4 x AA batteries are changed before each heating season.

Cold Climates – CPI Setting - Proflame 2 Remote Control

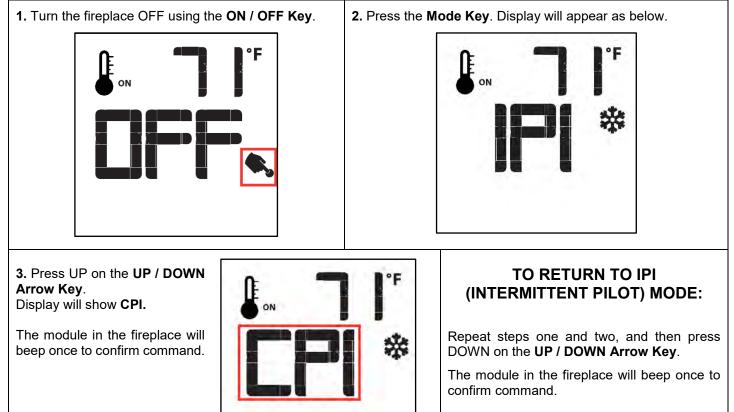

Use the CPI setting during cold weather, otherwise the fireplace may have a hard time starting up and establishing a flame. The **CPI** (Continuous Pilot Ignition) setting will keep the firebox and fireplace exhaust vent warm during cold weather. When the firebox and exhaust vent are warm, exhaust gasses will readily flow out of the firebox.

If the firebox and venting are too cold, there is resistance due to the heavy cushion of cold air, and combustion gasses may not rise into the exhaust vent, thus causing the fireplace to cycle or **Lockout** (if this happens see **Lockout Reset Procedures** below).

NOTE: The pilot system for this appliance may be equipped with a <u>Seven Day Timer</u>, in which case the pilot flame will be extinguished if the main burner has not been turned ON for seven days. This Seven Day Cycle is reset every time the main burner is cycled ON / OFF and the pilot remains lit.If more than seven days has passed since the main burner has been cycled ON / OFF and the pilot is also out, follow the procedures described in this manual to light the pilot.

To switch from IPI to CPI Mode:

Lockout Reset Procedures – Proflame 2

If the fireplace has cycled too many times in a short period of time, it will shut down and become unresponsive to any new command.

The LED light on the Proflame 2 module in the fireplace will be flashing red.

This condition is a **Lockout** state.

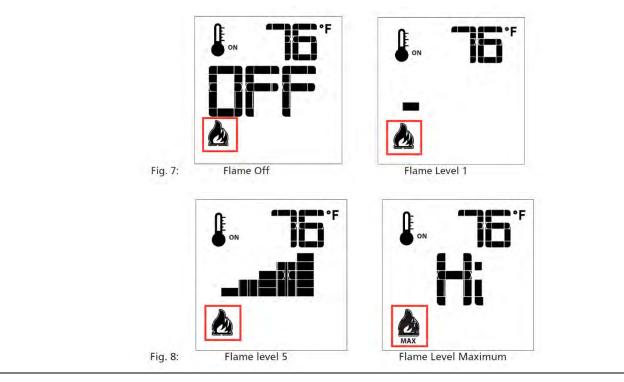

Lockout Reset Procedure:

- 1. Disconnect power from the Proflame 2 module in the fireplace for 10 seconds. This includes removing the backup batteries.
- 2. Once the 10 second interval has passed, reconnect power and reinstall backup batteries. The pilot should now try to light.
- 3. If the fireplace does not come on, call your fireplace technician.

Remote-Flame Control

The proflame has six (6) flame levels. With the system on, and the flame level at the maximum in the appliance, pressing the Down Arrow Key once will reduce the flame height by one step until the flame is turned off.

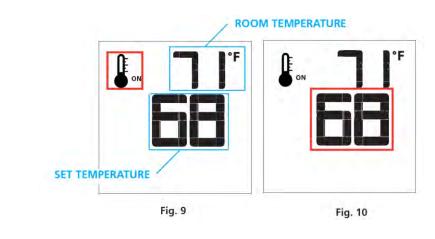

The Up Arrow Key will increase the flame height each time it is pressed. If the Up Arrow Key is pressed while the system is on but the flame is off, the flame will come on in the high position. (Fig. 7 & 8) A single "beep" will confirm reception of the command.

Room Thermostat (Transmitter Operation)

The Remote Control can operate as a room thermostat. The thermostat can be set to a desired temperature to control the comfort level in a room.

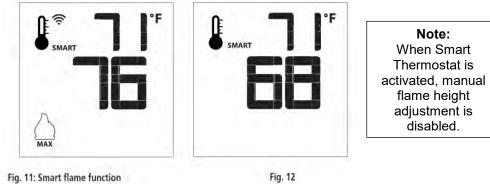

To activate this function, press the Thermostat Key (Fig. 1). The LCD display on the Transmitter will change to show that the room thermostat is "ON" and the set temperature is now displayed (Fig. 9). To adjust the set temperature, press the Up or Down Arrow Keys until the desired set temperature is displayed on the LCD screen of the Transmitter.

Smart Thermostat (Transmitter Operation)

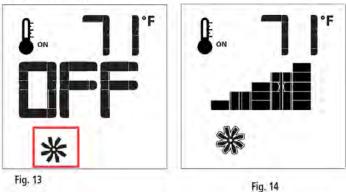

The Smart Thermostat function adjusts the flame height in accordance to the difference between the set point temperature and the actual room temperatures. As the room temperature gets closer to the set point the Smart Function will modulate the flame down. To activate this function, press the Thermostat Key (Fig. 1) until the word "SMART" appears to the right of the temperature bulb graphic (Fig. 11).

To adjust the set temperature, press the Up or Down Arrow Keys until the desidered set temperature is displayed on the LCD screen of the Transmitter (Fig. 12).

Fan Speed Control

If the appliance is equipped with a hot air circulating fan, the speed of the fan can be controlled by the Proflame system. The fan speed can be adjusted through six (6) speeds. To activate this function use the Mode Key (fig.1) to index to the fan control icon (Fig. 13). Use the Up/Down Arrow Keys (Fig.1) to turn on, off or adjust the fan speed (fig. 14). A single "beep" will confirm reception of the command.

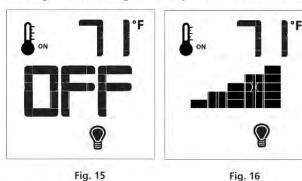

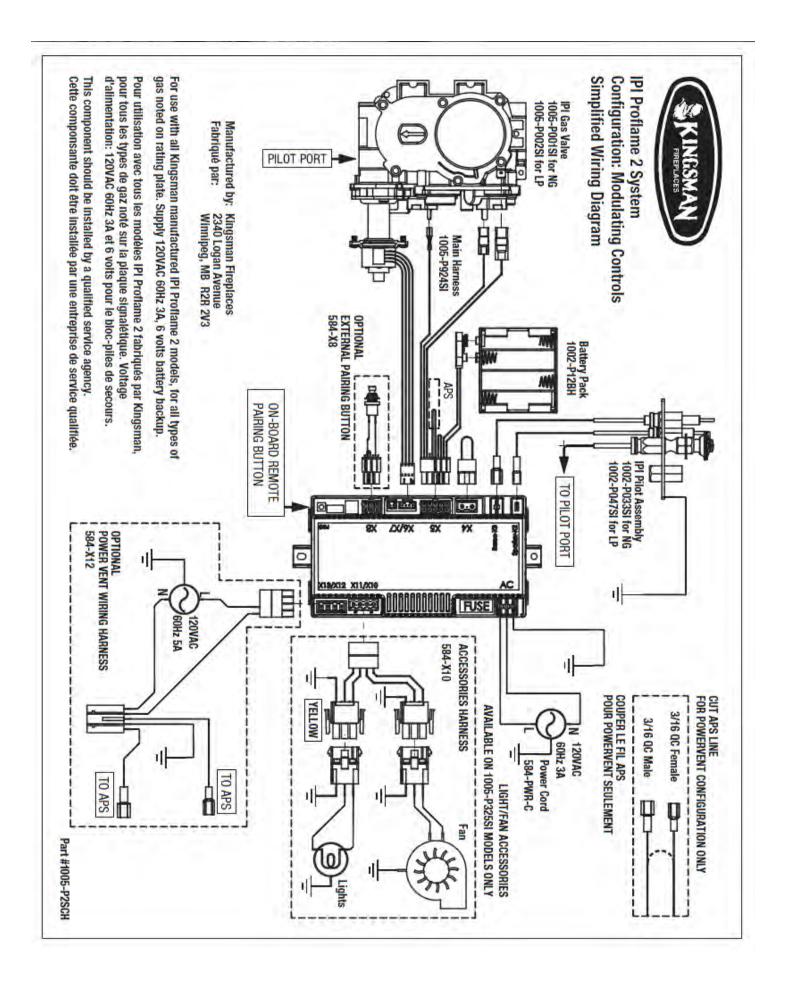

Remote dimmer control (Light)

The auxiliary function controls the AUX power outlet by the dimmable light control. To activate this function use the Mode Key (fig. 1) to index to the AUX icon (fig. 15 & 16).

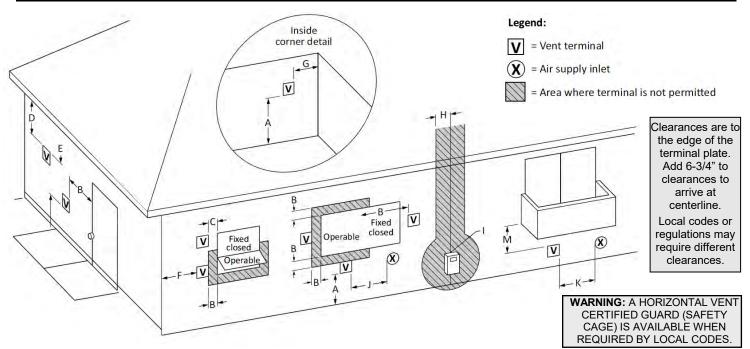

The intensity of the output can be adjusted through six (6) levels. Use the Up/Down Arrow Keys (Fig. 1) adjust the output level (fig. 16). A single "beep" will confirm reception of the command.

Note: This function is only available in Room Thermostat or Smart Thermostat Control Mode.

| * Clearance in accordance with local installation codes and the requirements of the gas supplier. | | Do not locate termination where excessive snow or ice build-up may occur. Be sure to check vent termination area after snow falls and clear to prevent accidental blockage of venting system. When using snow blowers, make sure snow is not directed towards vent termination area. Venting terminal shall not be recessed into a wall or siding. If finishing the outside wall with vinyl or wood siding it is recommended that a Siding Shield be installed, | | |
| † A vent shall not terminate directly above a sidewalk or paved driveway that is located between two single family dwellings and serves both dwellings. | | | | |
| ‡ Permitted only if veranda, porch, deck, or balcony is fully open on a minimum of two sides beneath the floor. | | | Part Number ZDVSSLR. | |

General Vent Installation Information

This gas appliance is approved to be vented either through the side wall or vertically through the roof. Only Kingsman Flex (Z-Flex) Venting Kits and components specifically approved and LABELED for this stove may be used. This appliance is also approved for use with 5 x 8 M&G-Duravent Direct Vent system (Model DV-GS Series), BDM Pro Form Direct Vent, Ameri-Vent Direct Vent Pipe System, ICC Excel Direct, Metal Fab Sure-Seal DV and Selkirk Direct Temp.

RIGID OR HARD PIPE

When using 5 x 8 M&G-Duravent, Ameri-Vent pipe, BDM Pro Form Direct Vent, ICC Excel Direct, Metal Fab Sure-Seal DV and or Selkirk Direct Temp a 5 x 8 M&G Duravent hard pipe adapter must be used (**part # Z58DFA**). Follow installation instructions provided by M&G-Duravent/Ameri-Vent/Selkirk Direct Temp, ICC Excel Direct, and Metal Fab Sure-Seal DV for installation of pipe and adhere to the clearance to combustibles provided in this manual. Apply a bead of Mill Pac high temp sealant to all joints of pipes, adapters and termination, when using Kingsman Flex (Z-Flex) venting and M&G-Duravent venting.

NOTE: Increase framing depth by one inch when using hard pipe.

FLEX PIPE VENTING

Kingsman Flex pipe is shipped in unexpanded length. When installing pipe expand the lengths. Pipe can be expanded to twice their lengths e.g. 4ft to 8ft. Fully expand pipe and cut off excess. Do not use more than 2 couplers to extend short pipes. Single sections are preferred in an installation attaching at the fireplace and termination.

Place the spring spaces provided approximately every two feet to stabilize 5" flex in the center of 8" flex. When forming bends place spring in bend or before and after. (See Fig. 1). Horizontal runs require support metal straps every 2 feet. In offset installation support straps should be used to stabilize pipe.

Expand 5" and 8" flex pipe to the point that the 8" protrudes approximately 2 to 3 inches past outer wall and the 5" flex protrudes approximately 2 to 3 inches past the 8" flex. (See Fig. 1). Attach the 5" pipe to the termination first and secure with sealant and screws then attach the 8" flex to the termination with caulking and screws. Termination may then be moved back to the outer wall and attached to home screwing into the framing. Silicone around termination to waterproof. If siding shield is going to be used attach this using same attaching hole as the top of termination after termination has been caulked for water proofing.

Use Hi Temp Sealant

Apply a bead of Mill Pac high temp sealant to all joints and use four screws to secure each pipe at fireplace, termination and any joint if joining any sections of pipe.

MARNING: DO NOT mix parts from different systems unless stated in the manual.

Installation of Side Wall Venting

- To determine the minimum distance from the bottom of fireplace to center of vent see the *Framing Your Gas Fireplace* section. Cut a hole through the wall allowing for a 12" x 12" (inside diameter) in combustible walls for wall thimble or a 9" diameter hole in a non-combustible wall (See Figure 2).
- 2. For the clearance to combustible above a 90 degree bend see *Clearance to Combustibles* section.
- Select the approximate vent length, precise measurements are not needed as your flex pipe can be expanded to twice its shipped length for ease of installation
- 4. To install wall thimble center over 12" x 12" (inch) framing from both sides of wall and secure. Route flex vent pipe through wall thimble (See Figure 1).
- 5. Before joining pipes, apply a bead of high temperature sealant (Mill Pac) to end of pipe. First attach the five inch (5") flue pipe to the vent termination with sealant, and secure with the four screws provided. At this time make sure the spacer springs are attached to the (5") flex pipe as required. Then attach the eight inch (8") pipe by the same method.
- Mount vent termination and seal to wall using caulking around the wall thimble to weather proof. After installing the vent termination, double check to make sure the pipe extends properly through wall thimble and into vent termination.
- 7. Before joining pipes to fireplace flue, apply a bead of high temperature sealant (Mill Pac) to end of pipe. First attach the five inch (5") flue pipe to fireplace with sealant, and secure with the four screws provided. At this time verify that the spacer springs are attached properly to the (5") flex pipe as required. Then attach the eight inch (8") pipe by the same method.
- Support horizontal pipes every two (2) feet (61 cm) with metal strap bands. Re-check fireplace to make sure it is level and properly positioned and secured.
- 9. Support vertical pipes to maintain a minimum of 1" or greater clearance to combustibles with metal strapping bands.
- 10. If finishing the outside wall with vinyl or wood siding it is recommended that a Siding Shield be installed, Part Number ZDVSSLR.

Note: Vent Termination must not be recessed into wall or siding.

FLUE GAS OUTLET COMBUSTIBLE AIR INLET MINIMUM 1" TO COMBUSTIBIES Combustibles MIN 55" FOR MCVP42N MIN 79" FOR MCVP42LF FIGURE 1 Figure 1 FRAMING DETAIL 9" DIA MIN 55" FOR MCVP42N MIN 79" FOR MCVP42LF THROUGH THROUGH NON-COMBUSTIBLE WALL COMBUSTIBLE WALL FIGURE 2

WARNING: A HORIZONTAL VENT CERTIFIED GUARD (SAFETY CAGE) IS AVAILABLE WHEN REQUIRED BY LOCAL CODES.

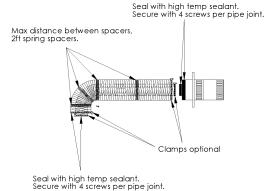

FRAMING DIMENSION

Combustible Wall Cut a 12" hole through exterior wall and frame as shown below.

Non Combustible Wall

Cut or drill 9" diameter hole.

Figure 1

NOTE: It is critical to the proper and safe operation of this fireplace that on all connections the inner liner and the outer casing are both caulked with liberal amounts of sealant. Do not use any kind of tape or silicone other than that recommended in this manual, Mill Pac Sealant

Venting Routes and Components

Since it is very important that the vent system maintain its balance between the combustion air intake and the flue gas exhaust, certain limitations as to vent configurations apply and must be strictly adhered to.

The table showing the relationship between vertical and horizontal side wall venting will help to determine the various vent lengths.

The maximum horizontal run is 20 ft/6.1 m when the vertical run is 7 ft. / 2.1m (Figure #2). Note: 1/4" vertical rise is required for every 12" of horizontal run.

The maximum number of 45 degree bends per side wall installation is two (2) in the horizontal run and then you must reduce the length of the horizontal by 18 inches for each 45 degree bend.

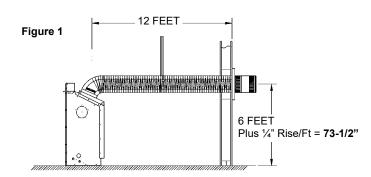

The maximum vertical run is 43 ft. / 13.1meters.

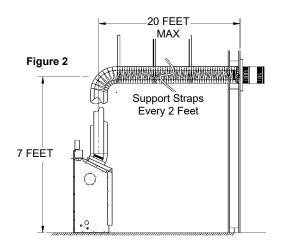

Special Note: For each 45 degree bend installed in the horizontal run, the length of the horizontal run must be reduced by 18" (45cm). This does not apply if the 45 degree bends are installed on the vertical part of the vent system.

Example: If according to the table, the length of the horizontal run is 10 feet, and two 45 degree bends are required, the horizontal run length must be reduced to 7 feet.

2 additional 90° bends or equals are allowed. The horizontal run must be reduced by 36" per each 90° bend, or 18" per each 45° bend.

IMPORTANT: Always locate the fireplace in such a way that a minimum of offsets and/or horizontal runs are required. 1/4" vertical rise is required for every 12" horizontal run.

How to Use the Horizontal Vent Table

- 1. Determine the height of the system and the number of bends required.
- 2. Having determined the vertical distance determine the maximum horizontal section allowed.
- 3. Vent table has been established for 90° horizontal/vertical runs. With use of flex pipe distance not having 90° bends will not fall into vent table standards. See Fig. B.

-Horizontal Venting Table from Bottom of Fireplace-

For venting to a maximum of 43ft (13.1 meters).

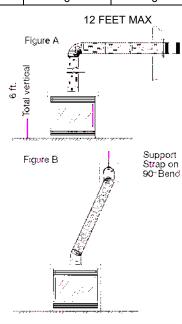

| Total Vertical | | Max Total | Horizontal |

| 30 | 9.1 | 10 | 3.0 |
| 43 (Max) | 13.1 | 0 | 0 |

Example A:

If the vertical dimension from the floor of the fire- place is 6ft, the horizontal run to the wall flange of the vent termination must not exceed 12ft.

NOTE: The final location of the fireplace must be such that the horizontal vent dimensions fall within those stated on the graph. The Maximum Vertical vent run is 43ft. (13.1 meters).

Important: Minimum clearance between vent pipes and combustible materials is1 inch (25mm).

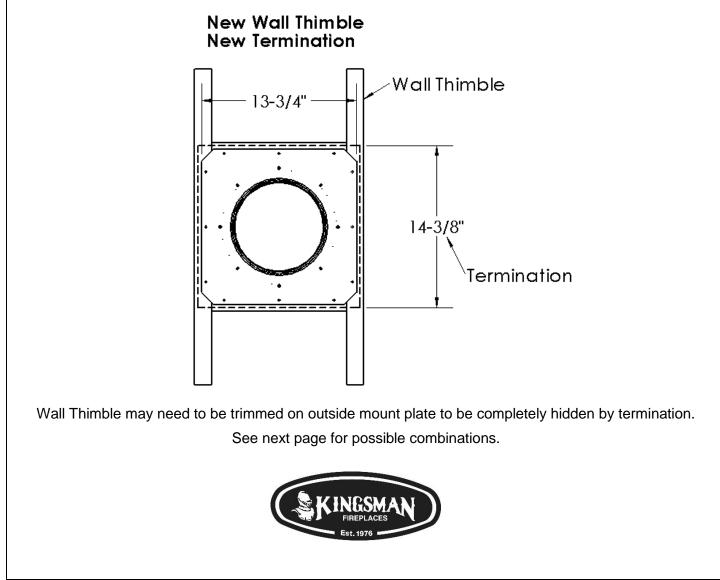

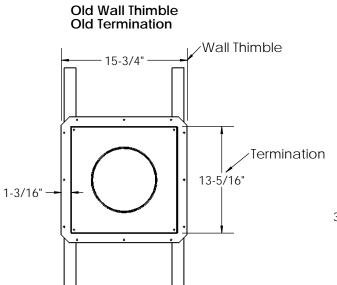

For **Propane Horizontal installations** the venting must be an additional two feet above the minimum vertical rise off the flue before going horizontal.

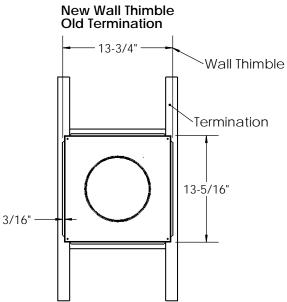

Z58HT Horizontal Installations- Wall Thimble Sizing / Termination Sizing-

NOTE: If you are installing 5/8 Termination in an existing wall, measure diameter of both Wall Thimble and Termination.

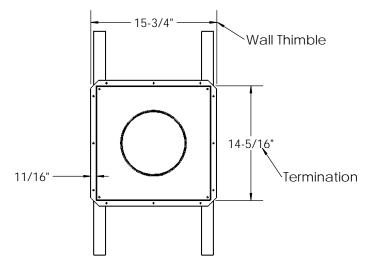

In the future, Wall Thimble mount plate will be smaller than Termination Plate as a running change has been implemented.

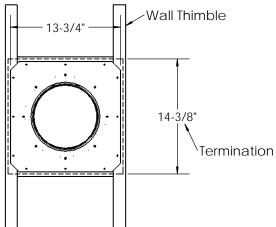

Old Wall Thimble New Termination

New Wall Thimble New Termination

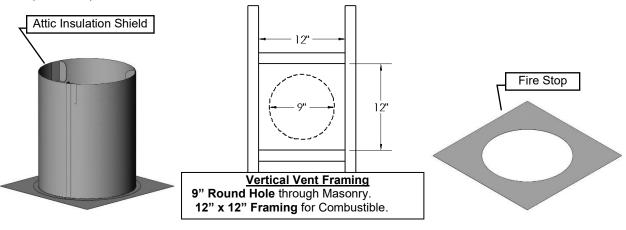

Venting Straight Up Through Roof

An Attic Insulation Shield must be installed where the vent passes from a lower living space into an attic space where the chimney is not enclosed. It is designed to keep insulation materials away from the chimney.

When installing the Attic Insulation Shield where the chimney passes from a living space to an attic space, install the shield from below and nail in place using 1" spiral nails.

A fire stop must be installed on the bottom side of the joists when passing through a ceiling or floor. If an attic insulation shield is to be used, a fire stop is not required.

Using Flex Bends

Avoid cutting joists by offsetting the flex pipe.

When using 45° bends a bend support is required directly above the highest bend.

When installing a bend in a joist area a minimum of 4" clearance to combustible to the top of bend must be maintained, sides and bottom of pipe, a 1" clearance to combustibles must be maintained. If running horizontal through an area a 1-1/2" minimum clearance to the top of the horizontal pipe must be maintained.

Maximum vertical height of system should not exceed 43 feet.

Use roof support and rigid pipe at roof level. Flex pipe is not permitted within roof support.

When penetrating the roof a rigid galvanized pipe must be used. Attach flex pipe to the rigid pipe with high temperature sealant, secure with four screws assuring the flex pipe and rigid pipe are secured. Attach rigid pipe to termination with sealant and screw with 4 sheet metal screws. The Inner flex pipe must be secured with 4 screws which must penetrate both the flex pipe and inner section of termination. Attach 8" rigid pipe to 8" termination with sealant and screw with 4 sheet metal screws.

Vertical termination clearance is 18" [45.7cm] above the roof, measured from highest point of exit on the roof line.

Support vertical pipes to maintain minimum of one inch or greater clearances to combustibles.

Roof Flashing

Ensure that you have the proper roof flashing by checking your roof pitch using a level and two rulers, or by using a roof pitch card. Slide a Roof Flashing suitable to your roof slope over the vent. Place the edge of the flashing plate that will be on the higher part of the roof slope under the shingles. Both the sides and the lower edge lay on top of the shingles.

NOTE: At the top edge of the flashing plate, lift the shingles and nail the plate to the roof deck, then cement the shingles to the plate with a suitable waterproof mastic.

Ensure that the chimney is plumb. Square up the flashing plate and nail in place to the roof deck. Use 12 nails with neoprene washers or cover the heads with a suitable waterproof mastic. Wrap the storm collar around the vent above the flashing. Secure the ends together loosely with nut and bolt supplied. Slide the collar down the vent until it comes in contact with the flashing. Tighten the bolt and seal the Storm Collar to the vent with a suitable waterproof non-combustible mastic.

The flashing and storm collar should be painted to match the roof shingles. This will extend its life and improve the appearance. Clean, prime and paint with suitable painting products.

Vertical Venting in Cold Climates

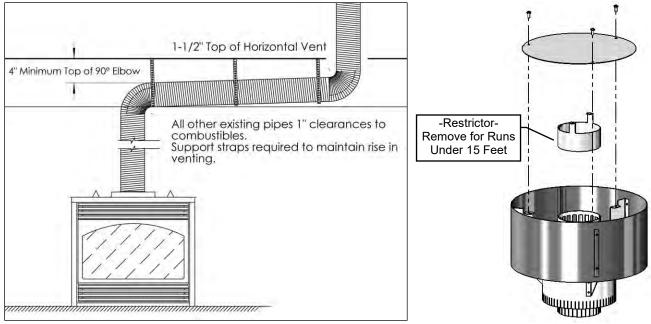

In cold climate conditions where temperatures go below -10 degrees Celsius or 14 degrees Fahrenheit, we recommend that the chase be insulated and where the vent pipe enters into the attic space that the pipe be wrapped with an insulated Mylar sleeve. This will increase the temperature of the vent and help the appliance to vent properly in cold weather conditions.

It is also important in vertical vented direct vent appliances that the appliance be operated daily during the winter months as this will help stop the termination from freezing up.

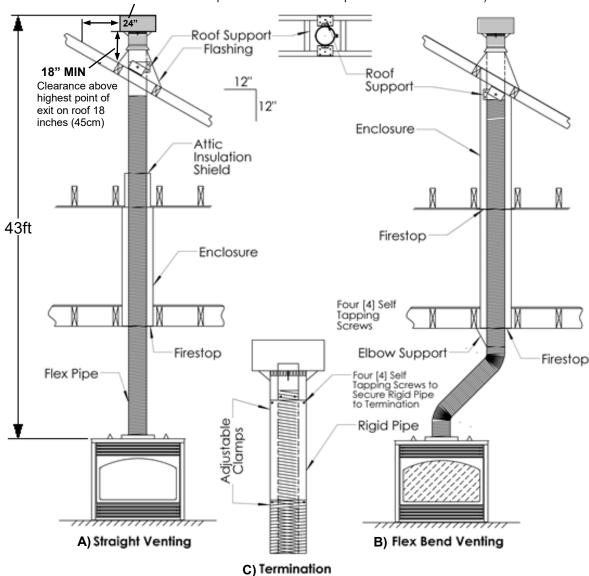

We recommend using a thermostat set at room temperature to allow the unit to cycle.

For IPI models it may be necessary to set the appliance to Standing Pilot mode to maintain heat in the cavity. The purpose of this procedure is to prevent cold air from penetrating the chimney and then onto the living space. Therefore, when the internal temperature is slightly elevated the fireplace is able to freely exhaust its combustion and hence making it easier to start up.

-ALSO SEE DIAGRAMS ON FOLLOWING PAGE-

Clearances in horizontal venting.

Clearance to perpendicular wall 24 inches (60 cm). (Recommended to prevent recirculation of exhaust products. For additional requirements check local codes.)

-Glass Safety- All Units

IT IS THE RESPONSIBILITY OF THE HOME OWNER TO ENSURE THAT NO ONE TOUCHES A HOT APPLIANCE.

If the barrier becomes damaged, the barrier shall be replaced with the manufacturer's barrier for this appliance.

Any safety screen, guard, or barrier removed for servicing the appliance, must be replaced prior to operating the appliance.

 Children and adults should be alerted to the hazards of the high surface temperatures of this appliance and should stay away to avoid burns or ignition of clothing.

Do not clean when the glass is hot.

HOT GLASS WILL CAUSE BURNS.

DO NOT TOUCH GLASS UNTIL COOLED.

NEVER ALLOW CHILDREN TO TOUCH GLASS.

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at-risk individuals.

- Young children should be carefully supervised when they are in the same room as the appliance. Toddlers, young children and others may be susceptible to accidental contact burns.
- A physical barrier is recommended if there are at risk individuals in the house. To restrict access to a fireplace or stove, install an adjustable safety gate to keep toddlers, young children and other at risk individuals out of the room and away from hot surfaces.
- Do not leave the fireplace remote control where it is accessible to children.

-Termination Cap Safety- All Units

A HORIZONTAL VENT CERTIFIED GUARD (SAFETY CAGE) IS AVAILABLE WHEN REQUIRED BY LOCAL CODES.

SAFETY CAGES ARE AVAILABLE FOR ALL HORIZONTAL VENT TERMINATIONS. CHECK WITH YOUR DEALER.

- **TERMINATION CAP IS HOT!** Do not place flammable materials on or within 24 inches of termination caps.
- It is imperative that the vent termination be located observing the minimum clearances as shown in manual.
- There must not be any obstruction such as bushes, garden sheds, fences, decks or utility buildings within 24" from the front of the termination plate.
- Do not locate termination where excessive snow or ice build-up may occur. Be sure to check vent termination area after snow falls and clear to prevent accidental blockage of venting system. When using snow blowers, make sure snow is not directed towards vent termination area.
- Venting terminal shall not be recessed into a wall or siding.

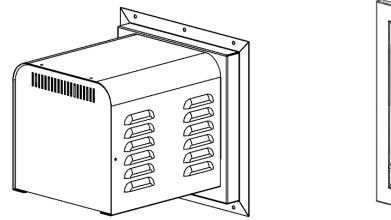

Approved for Power Vent PVH58 / PVH58FM

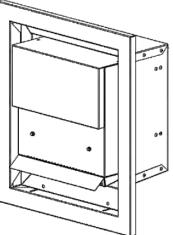

- This appliance is approved for use with a Kingsman PVH58 Horizontal Power Vent -

A Horizontal Power Vent Termination is intended for use where standard venting configurations are not possible.

NOTE: MODELS EQUIPPPED WITH MILLIVOLT/ STANDING PILOT IGNITION: Downward vertical vent runs are **NOT** permitted.

NOTE: MODELS EQUIPPPED WITH INTERMITTENT PILOT IGNITION (Proflame 1 or Proflame 2): Downward vertical vent runs are permitted, however, Cold Climate Switch (Standing Pilot Mode) must **NOT** be used.

Maximum / Minimum Vent Lengths:

Maximum Vent Length is 125 ft plus six 90° elbows with Air Intake Shutter fully closed. Termination must not be below unit.

This power vent can be installed up to **8ft** below the installed fireplace on runs less than 100ft and not more than four 90° elbows.

Minimum Vent Length is 1 FT vertical x 3 FT horizontal x 3 FT vertical x 3 FT horizontal (See PVH58 manual).

Seven 90° elbows are possible if the total horizontal is not more than 25ft and the vertical does not exceed 15ft.

Refer to Power Vent Manual for proper installation and use.

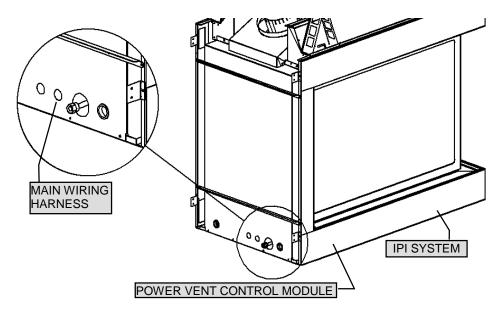

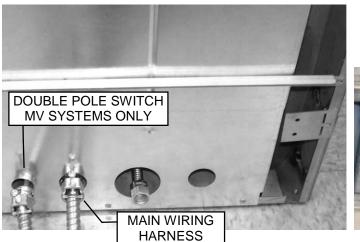

Atrium MCVP42

Power Vent Control Module Installation

FIREPLACE IS SUPPLIED WITH ONE JUNCTION BOX. ADDITIONAL OUTLETS MAY BE REQUIRED. CONSULT A QUALIFIED ELECTRICIAN.

Power Vent Control Module Mounted inside fireplace.

FOLLOW EITHER MILLIVOLT OR IPI SYSTEM INSTRUCTIONS TO COMPLETE THE INSTALLATION.

| Power Ve | ent Parts List – 5/8 Venting |
|---------------------|---|
| NUMBER | DESCRIPTION |
| PVH58 | Horizontal Power Vent Starter Kit - Exterior Mount |
| PVH58FM | Horizontal Power Vent Kit - Flush Mount |

Troubleshooting the Gas Control System

WARNING

BEFORE DOING ANY GAS CONTROL SERVICE WORK, REMOVE THE GLASS FRONT. NOTE: Before troubleshooting the gas control system, be sure external gas shut off is in the "On" position.

| Problem | Possible Causes | Corrective Action |
|---|--|---|
| Spark igniter will not light. | Defective or misaligned electrode at pilot. | Check for spark at electrode and pilot: if no spark and electrode wire is properly connected, replace igniter. |
| | Defective igniter (push- button). | Using a match, light pilot. If pilot lights, turn off pilot and push the red button again. If pilot will not light - check gap at electrode and pilot should be 1/8" to 1/4" to have a strong spark. |
| Pilot will not stay lit after carefully following lighting instructions. | Defective thermocouple (flame switch where applicable). | Check pilot flame. Must impinge on generator and thermocouple. Clean and/or adjust pilot for maximum flame impingement on generator and thermocouple. Replace thermocouple if pilot will not hold. (Hand tight 1/8 turn on replacement) |
| | Defective valve magnet. | Replace valve, if pilot won't hold after the thermocouple is replaced. |
| Pilot burning, no gas to burner, valve knob "ON", and wall switch "ON". | Wall switch or wires defective. | Check wall switch and wires for proper connections. Jumper wire across terminals at wall switch. If burner comes on, replace defective wall switch. If okay, jumper wires, across wall switch wires at valve. If burner comes on, wires are faulty or connections are bad. |
| | Generator may not be generating sufficient voltage. | Check generator with millivolt meter. Take reading at generator terminals of gas valve. Should read 325 millivolts minimum while holding valve knob depressed in pilot position and wall switch "off" Replace faulty generator if reading is below specified minimum. |
| | Plugged burner orifice. | Check burner orifice for stoppage and remove. |
| | Defective automatic valve operator. | Remove wall switch wires from gas valve. Install jumper wires from top bottom terminals of gas valve. Turn valve on "ON". If main burner does not light, replace valve. |
| Frequent pilot outage problem. | Pilot flame may be too low or blowing (high) causing the pilot safety to drop out. | Clean and/or adjust pilot flame for maximum flame impingement on generator and thermocouple. *See NOTE below – Seven Day Timer |
| Flame lifts off burner and goes out in less than 30 seconds. | Inner 4" liner has come off flue or termination, flame is starving for oxygen. | Attach 4" liner to flue or termination using screws, silicone and clamps as stated in manual. |
| Flame lifts off burner on one side while the rest of the flame remains lit. | Improper installation of firebrick. Firebrick is likely leaning. | Be sure to position firebrick against firebox walls and be sure to use brick clips attached to the inner side of firebox. |

***NOTE:** The pilot system for this appliance may be equipped with a <u>Seven Day Timer</u>, in which case the pilot flame will be extinguished if the main burner has not been turned ON for seven days.

This Seven Day Cycle is reset every time the main burner is cycled ON / OFF and the pilot remains lit.

If more than seven days has passed since the main burner has been cycled ON / OFF and the pilot is also out, follow the procedures described in this manual to light the pilot.

LIMITED LIFETIME WARRANTY

This Limited Lifetime Warranty applies only while the unit remains at the site of the original installation and only if the unit is installed inside the continental United States, Alaska, Hawaii, and Canada. The warranty applies only if the unit is installed and operated in accordance with the printed instructions and in compliance with applicable installation and building codes and good trade practices.

BASIC ONE YEAR WARRANTY

During the first year after installation of the appliance, we will provide a replacement for any component part of your unit found to be defective in materials or workmanship, including labour costs. Repair work requires prior approval by Kingsman, labour costs are based on a predetermined rate schedule and any repair work must be done through an authorized Kingsman dealer.

(Excluded Components: Accent Light Bulbs, Gasketing and Paint)

LIMITED LIFETIME WARRANTY

The heat exchanger, combustion chamber and burner of every Kingsman product excluding the Outdoor Firepit are warranted against materials or workmanship during the period the product is owned by the original owner. The part to be replaced must be returned to our distributor in exchange for the replacement part. Any labor, material, freight and/or handling charges associated with any repair or replacement pursuant to this Limited Lifetime Warranty will not be covered by this warranty.

GENERAL TERMS

In lieu of providing a replacement part, we may, at our option, provide the distributor's component purchase price from us or a credit equal to the distributor's component purchase price from us toward the purchase of any new unit which we distribute. If a credit is given in lieu of a replacement part, the rating plate from the unit being replaced must be submitted on a warranty claim, and the unit being replaced must be made available to our distributor for disposition.

In establishing the date of installation for any purpose, including determination of the starting date for the term of this Limited Lifetime Warranty, reasonable proof of the original installation date must be presented*, otherwise the effective date will be based upon the date of manufacture plus thirty (30) days.

We will not be responsible for and you, the user, will pay for: (a) damages caused by accident, abuse, negligence, misuse, riot, fire, flood, or Acts of God (b) damages caused by operating the unit where there is a corrosive atmosphere containing chlorine, fluorine, or any other damaging chemicals (other than in a normal residential environment) (c) damages caused by any unauthorized alteration or repair of the unit affecting its stability or performance (d) damages caused by improper matching or application of the unit or the unit's components (e) damages caused by failing to provide proper maintenance and service to the unit (f) any expenses incurred for erecting, disconnecting or dismantling the unit (g) parts or supplies used in connection with service or maintenance (h) damage repairs, inoperation or inefficiency resulting from faulty installation or application (i) electricity or fuel costs or any increase in electricity or fuel cost whatsoever including additional or unusual use of supplemental electric heat.

We shall not be liable for any incidental, consequential, or special damages or expenses in connection with any use or failure of this unit. We have not made and do not make any representation or warranty of fitness for a particular use or purpose, and there is no implied condition of fitness for a particular use or purpose. We make no express warranties except as stated in this Limited Lifetime Warranty. No one is authorized to change this Limited Lifetime Warranty or to create for us any other obligation or liability in connections with this unit. Any implied warranties shall last for one year after the original installation. Some states and provinces do not allow the exclusion or limitation of incidental or consequential damages or do not allow limitations on how long an implied warranty or condition lasts, so the above limitations or exclusions may not apply to you. The provisions of this limited warranty are in additions to and not a modification of or subtraction from any statutory warranties and other rights and remedies provided by law.

Save this certificate. It gives you specific legal rights, and you may also have other rights which may vary from state to state and province to province.

In the event your unit needs servicing, contact your dealer or contractor who installed or serviced your unit. When requesting service, please have the model and serial number from each unit readily available. If your dealer needs assistance, the distributor is available for support and we, in turn support the distributor's efforts.

Fill in the installation date and model and serial numbers of the unit in the space provided below and retain this limited warranty for your files.

| Model No. | Seri | ial No. | Date installed | |
|-----------|------|---------|----------------|--|
| | | | | |

Dealer or Contractor Name:

*To receive advantage of your warranty, you must retain the original records that can establish the installation date of your unit.
