

Higg Product Impact Sustainability Index Qualifier

- Product impacts are calculated using the [Higg](#) Product Module (Version 1.0) developed by the Sustainable Apparel Coalition (SAC).
- We have measured the product impact through materials, processing, packaging, logistics, retail, product care, and end of life.
- Product comparison data is based on the Men's Crew Neck T-shirt.
- Comparisons of product impacts are calculated by creating exact replicas of our products in the Higg Product Module with different textile attributes.
- The results are calculated by our company and are not verified.
- Read more about the methodology and how we developed our calculations [here](#).
