

A wealth of information at your fingertips

Botanical Interests seed packets are created to inspire and educate the gardener in you! Key information is on the front of the packet, so you can at a glance find the perfect varieties for your garden space. More details are on the back with specific growing instructions and even recipes inside!

We simplified the language on the front of each vegetable seed packet to indicate if that variety is frost sensitive or frost tolerant.

We choose only the best varieties for home gardeners, because we want you to be successful.

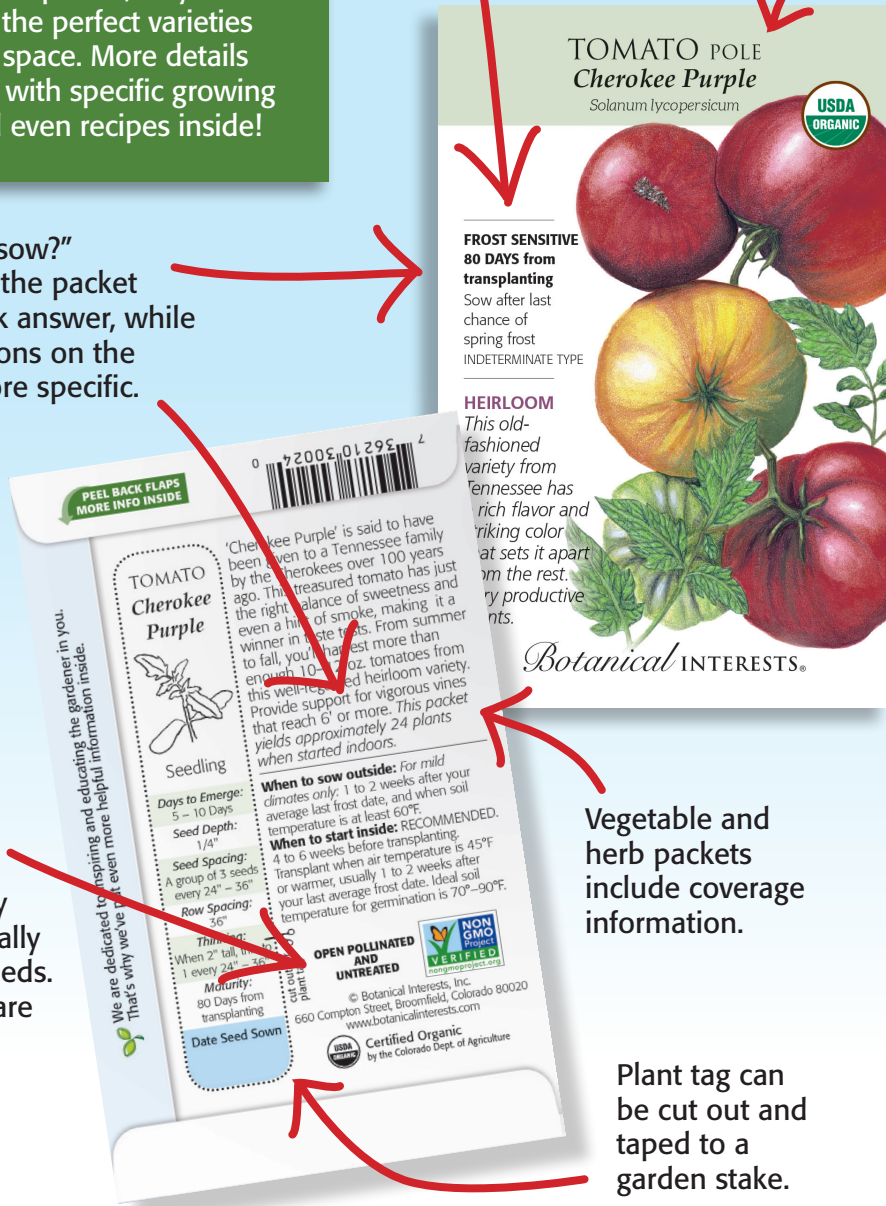

Look for certified organic varieties, which have a green bar on top and the USDA Organic symbol.

Know where to plant for appropriate exposure.

Find out if it's heirloom or native here.

A quick look at what makes this variety so great.

"When do I sow?" The front of the packet gives a quick answer, while the instructions on the back are more specific.

Vegetable and herb packets include coverage information.

Plant tag can be cut out and taped to a garden stake.

PERENNIAL FULL SUN TO PART SHADE
Blooms early summer
24"-36" tall

NATIVE
intense blue-violet flower spikes filled with sweet nectar for hummingbirds and butterflies. Makes gorgeous cut flowers!

We do not buy or sell genetically engineered seeds. All our seeds are untreated.

Non-GMO Project Verified

We completed the rigorous testing and evaluation required for our seed packets to now display the nationally recognized Non-GMO Project Verified label, which is clearly marked on the back of each seed packet.

Garden smarter with in-depth details inside every Botanical Interests® seed packet

Know the best time and method to harvest.

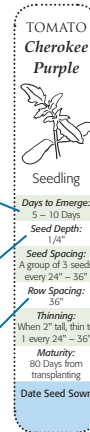

Using your seed packet plant tag

Each Botanical Interests seed packet has a plant tag that shows exactly how to sow your seeds in the garden.

Average number of days from sowing seed to germination.

Recommended depth for sowing seeds.

The distance needed between multiple rows of the same variety.

What the seedling should look like after the leaves emerge, so you can distinguish good seedlings from undesirable weed seedlings.

Recommended spacing helps you avoid crowding and seed waste.

Recommended thinning number and spacing for germinated seedlings to grow and develop.

Variety specific information to answer your questions.

Detailed growing instructions to help you succeed!

Look for recipes and ways to enjoy your harvest.

The Safe Seed Pledge

For the benefit of all farmers, gardeners, and consumers who want an alternative, we pledge that we do not knowingly buy, sell, or trade genetically engineered seeds or plants. We wish to support agricultural progress that leads to healthier soils, genetically diverse agricultural ecosystems, and ultimately, healthy people and communities.
