Assembly instructions

Taiyo pendant light

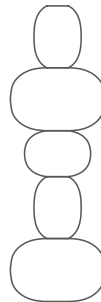

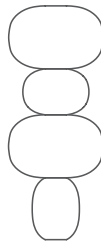

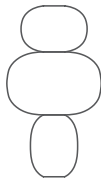

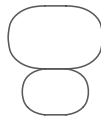

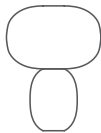

Components

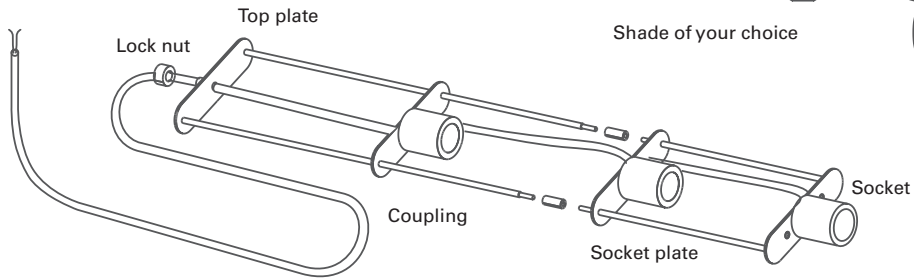

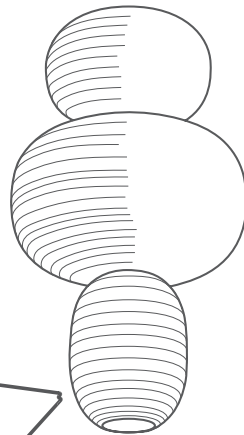

Canopy set

Spray bottle

Shade of your choice

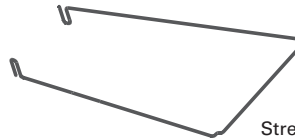

Top plate

Lock nut

Coupling

Socket plate

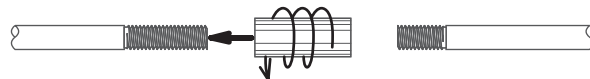

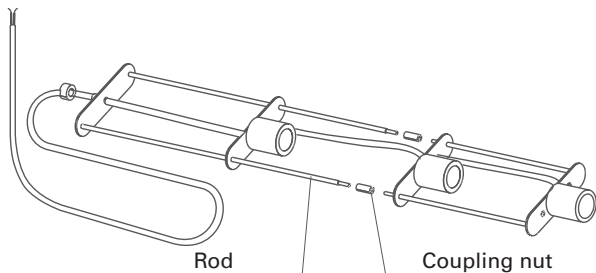

Socket

Stretcher

1

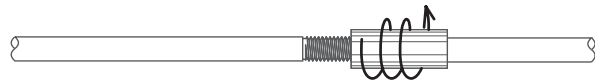

1. Place the body frame on a flat surface and connect the rods.
- 2 shades type does not need to be connected.
- 3 shades type require 2 connections.
- 4 shades and 5 shades type require 4 connections.

1. Screw the coupling nut to the end of the rod on the upper side (about 2 cm).

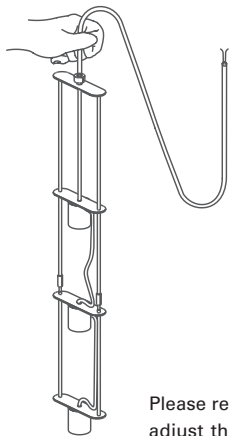

2. Insert coupling the connecting nut to the lower rod and screw it in to the end (about 1 cm).

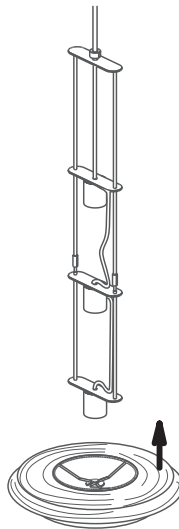

3. Complete when the upper and lower rods are screwed into the coupling nut by about 1 cm each.

- 2** Adjust the length of the cord and mount it on the ceiling
※ Please install with the power switch turned off.

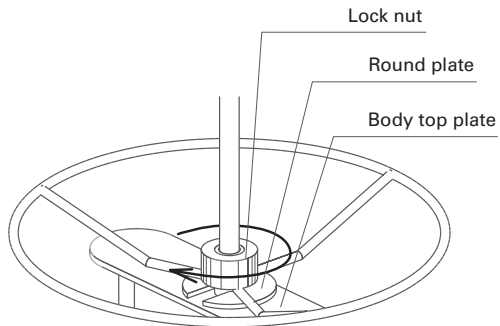

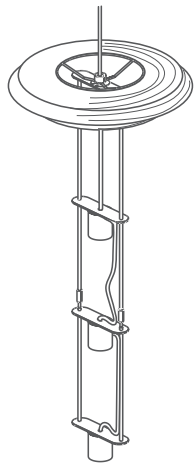

Please refer to the separate document for how to adjust the length of the cord and how to attach the ceiling canopy.

- 3** Install the shade Pass the frame through the notch on the round plate at the top of the shade.
Keep the shade folded and raise it carefully so that it will not be scratched by touching the socket plate.

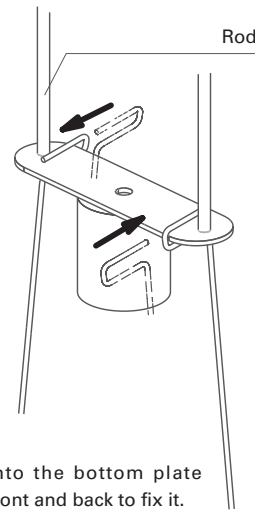

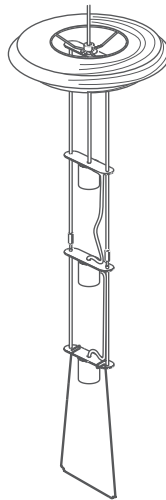

4 Fix the shade

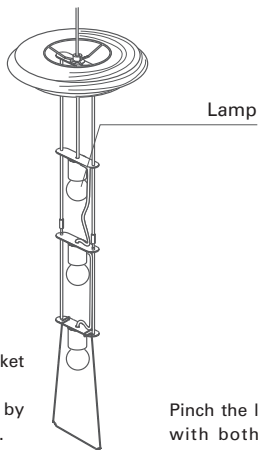

Insert the round plate between the upper plate of the main body and the lock nut to the center, and screw in the the nut to fix it.

5 Install shade expansion / Stretcher

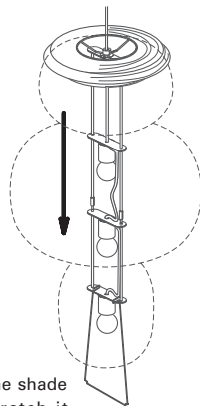

Slide it into the bottom plate from the front and back to fix it.

6 Install the light bulb (not included)

Align the lamp with the socket and screw it in securely. Check if the lamp lights on by turning on the power switch. After the check, turn off the power switch and proceed with assembly.

7 Stretch the shade down

Pinch the lower edge of the shade with both hands and stretch it down. Be careful not to tear the paper with the socket plate or nails.

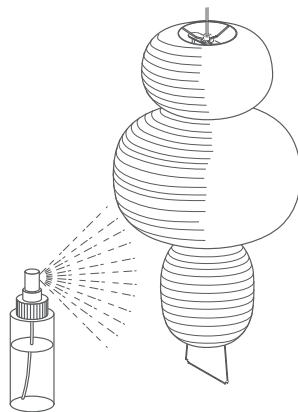

If it is dry and has strong folds and wrinkles, and the shade does not extend to the bottom, pour water into the attached spray bottle and spray the entire shade with mist.

The shade will start to stretch immediately, but the paper tear easily when the paper is wet, so please wait the assembly until it gets dry.

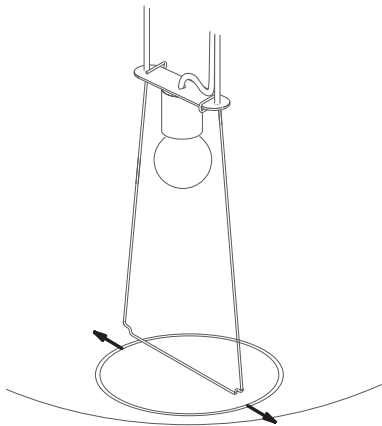

If the paper is stretched forcibly while it is wet, the shade may be torn.

Do not allow water to come in contact with anything other than the shade, such as electrical equipment.

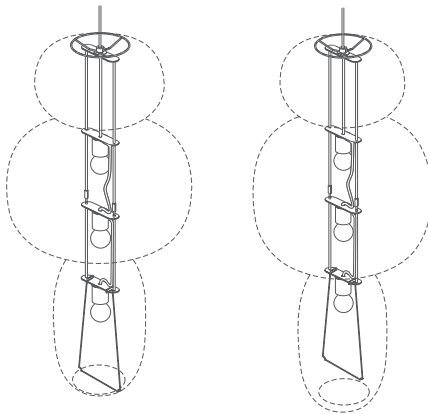

If the paper is not shrunk, you do not need to spray water.

8 Pass the stretcher through the shade

Push the opening of the shade from the inside and let the parts pass through

Washi (Japanese paper) expands and contracts due to humidity.

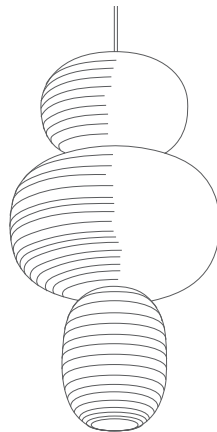

If the washi paper shade shrinks, it will be fixed with stretcher.

If the washi paper shade is stretched, the stretcher parts will be in a floating state, but this is not a malfunction.

9 Finish

Make sure that it is installed correctly, turn on the power switch, and when all the lamps light up, it is complete.

When the installation is finished, you can turn on the main power and the light will turn on.

Note: Please handle the shade carefully.

Attention

- If you do not install the equipment properly according to the instructions, there is a risk of injury due to fire, electric shock, or damage.
- If you feel any abnormality, turn off the power immediately. After confirming that the abnormality has subsided, contact an electrical contractor / dealer or customer service.
- If you use a lamp with a specified wattage (W) or more, there is a risk of fire or malfunction.
- Do not improve the equipment or replace parts. There is a risk of fire, electric shock, malfunction, etc.
