

THE **HOOF CO**

Beeswax PINK Balls

Can assist with management and prevention of thrush.

1

PREPARE THE HOOF

- Clean the hoof and remove any debris lodged in target areas
- Flush the cracks with Hoof Spray.
- Consider using our Curved tip syringes to ensure you are getting deep into the cracks.

APPLICATION AREA

- Ensure application area is clean and DRY prior to applying the balls. Beeswax and the natural oils repel moisture so the balls will not adhere thoroughly if the area is still moist.

2

3

HOW MUCH TO USE

- Our ball size is approx 12mm. If this amount is too much for smaller areas, simply break off a small portion and pack into the area. Balls can also be doubled up if necessary.

APPLICATION

- Ensure the area is dry and free from debris.
- Select the desired amount and firmly push into place.
- Do not overpack and try to avoid ground leverage by ensuring the ball has been packed deep into the groove.

4

5

HOW OFTEN DO I APPLY?

- Longevity of the application will depend on a few factors. Environment, application process and location of packed area.
- We recommend checking daily and reapplying as necessary.

WILL THE COLD AFFECT MY BALLS?

- Yes. With Beeswax as the base ingredient, this will be much firmer in the colder months.
- You can warm the balls in your hand or pocket before application to reinstate pliability.

6

7

HOW LONG SHOULD I CONTINUE?

- Continue the process, ensuring hoof is clean, free of debris before reapplying.
- For thrush prevention (once the issue is fully resolved) and ongoing maintenance pink balls can be applied weekly.
