Screws

Hex screws

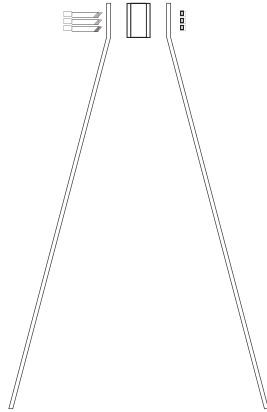

Hex key

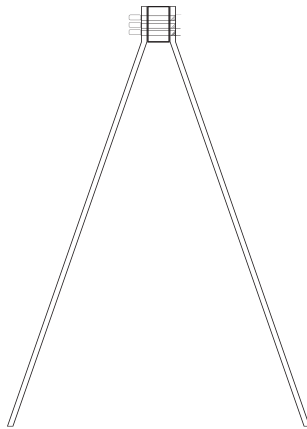

F56 TRESTLES TABLE

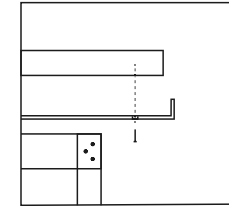

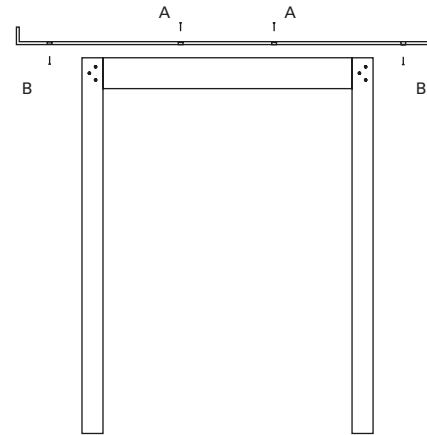

1. Start by screwing the longest screws through the three layers of two steel legs and the wooden centerpiece. For an easy assembly, balance the trestle against a sturdy object until both trestles are secure and optimal stability is achieved.

2. Tighten the bolt when the steel trestle is flush with the wood crossbar. Repeat on the second trestle.

3. Fasten the top bracket using the smaller screws according to the hole marks. B screws are optional and can be used if desired. A screws are the primary screws used to fasten the top.

Fasten B screws, by drilling directly into the tabletop

4. To assemble the tabletop, place each plank above the metal bracket. To keep a slight gap between planks, glue two provided adhesive felt spacers in between.
