

Hamilton Beach® Health Powered by HEALTHBEACON™

The Smart Sharps Bin™ from Hamilton Beach Health
Powered by HealthBeacon, the world's first and only
at-home injection care management system

Every Injection Matters - For many patients, staying on track with their injectable medication schedule is key to managing chronic illness. Adhering to a medication regimen is difficult and disposing of used syringes is frustrating. Working closely with patients, healthcare professionals, and with FDA clearance, the new Smart Sharps Bin system has been developed with one purpose in mind – to help remind patients to stay on time and on track with injection schedules, while safely and conveniently disposing of used sharps at-home.

Simplify At-Home Injections– Every injection is recorded by simply dropping a used injector into the Smart Sharps Bin to keep it safely stored. It is then recorded, and the on-time score is updated allowing the accurate monitoring of progress. Working together, the Smart Sharps Bin technology and Injection Care Management System address critical issues by increasing adherence, reducing missed doses, and providing 24/7 care support, injection site management and a more sustainable home waste collection service. The companion app provides a digitally connected reminder system, and patients can then choose to share their report with anyone they approve. Patients can stay on track with routines by setting up a personalized schedule. Specify the date, time and injection site then receive reminders on a mobile APP called Companion Medication Adherence. Customer care is available 24/7.

Safe, Discreet Storage and Disposal – Proper storage and disposal of medical waste can be daunting. With the Smart Sharps Bin, disposal of syringes is hassle-free for peace of mind. As part of the subscription, the patient will automatically receive a replacement sharps bin before it is needed. Simply return the full bin in the prepaid package by U.S. Postal Service.

Affordability - this technology and its services are available for as little as \$1 per day for eligible Medicare enrollees through their providers, and it is supported by FSA/HSA eligibility. This program is more financially accessible, and it addresses the financial challenges many patients face while managing chronic diseases. See website for details.
