Our Commitment to Quality and You

We congratulate you on your superb professional shear purchase. Our shears have been created for today's top professional in the beauty industry.

Surface shears are hand forged out of the highest alloyed Molybdenum-Vanadium Stainless Steels.

Super heat treatment at over 2000 degrees Fahrenheit and sub zero ice tempering result in a tough, hard and uniform steel structure. The tools are then machined and processed by skilled artisan and expert craftsmen. Finally, the scissors are hand honed to a razor edge and checked on human hair for crisp cutting and smooth movement.

LIFETIME WARRANTY

Surface Shears are guaranteed for life against defects in material or workmanship, excluding accidental damage and normal wear. This includes the replacement of any parts, including bumpers, washers, and screws.

ACCIDENTAL DAMAGE WARRANTY

Surface further warrants all tools for a period of one year from the date of purchase for accidental damage such as a dropped or nicked tool! (Tools which have been abused or have been serviced elsewhere are not covered under warranty)

* Invoice of shear purchase must be included with shipment to verify date of purchase.

Shear Tension

The shear may loosen during shipment or use. If your shear is too loose it may not cut properly.

What is the proper tension?

1. Open you shear with the thumb-ring on the top and your shears pointed away from you.
2. Remove your thumb out of the ring. The thumb-ring should not drop.

How do I test for proper tension?

1. Open your shears. Follow the proper tension procedure.
2. If the top thumb-ring drops to a closed position.. it is too loose.
Use your star adjuster and tighten 2-4 clicks clockwise.
3. You must tighten your shear just enough to prevent your thumb-ring from dropping.
4. Overtightening can damage your shears.
