\* Only doors without glazing

\*\* According to PN-EN 1627:2011. Full doors and doors with glazing (P4) with INOX frame (chosen models) equipped with C class handle and C class lock cylinder

## EXPLORE DOORS

A GOOD DOOR IS NOT JUST MODERN DESIGN. EXPLORE THE TRAITS OF A GOOD DOOR!

### DOOR LEAF FILLED WITH PUR FOAM GLUED LAMINATED TIMBER INNER FRAME

The stability and longevity of our doors is not an accident. Above all, it is an appropriately designed construction supported by thought through technological process as well as high quality components.

doors are produced with the use of polyurethane foam by a method of flooding, which consists of filling the inside of the door with a carefully chosen, optimal reagent. Using powerful presses in which the doors remain until the inner space is completely filled and solidified, we produce for You doors fulfilling the highest standards.

Next element that stabilises the construction is a glued laminated timber inner frame additionally strengthened by finger-jointing, which is a construction part of the inside of door leaf. Using PUR foam flooding and glulam frame minimises the possibility of warping, favourably influencing the stability of entire constructions for years to come.

### COMPLETE DOORS ADJUSTMENT

Doors are supposed to function for years to come. Therefore, for optimal comfort of use, we must have a full range of adjustment.

**3D Hinges.** We equip our doors with 3d hinges that allows for smooth adjustment in all three dimensions, ensuring comfortable and easy adjusting without the need of removing the leaf from the door frame.

**Espagnolette.** Multi-point lock as a uniform and permanently interconnected system. Lock face plate runs the full length of door. This solution adds extra stability and airtightness while also simplifying adjustment possibilities and creating a sublime visual effect.

**Lock adjustment.** As standard we offer You a system of coupling plates that allows easy adjustments in all bolt locking points. Ensuring an optimal set of adjustments for the current season and Your preferences.

### GLAZING WITH WARM EDGE SPACER BARS

As standard, each glazing used in doors is equipped with a warm edge spacer bar in between individual panes of glass substantially improving thermal parameters of the sealed glazing unit. Using such a solution dramatically limits the effect of a heat bridge of glass simultaneously minimising the possibility of condensation gathering on the side parts of the glazing.

**CHECK WHAT TO KEEP IN MIND WHILE CHOOSING EXTERIOR DOORS**

## SUBTHRESHOLD EXTENSION

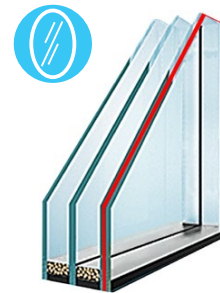

In order for Your exterior door to be Your joy for years to come, it should be equipped with a special construction that eliminates any heat-bridges (freezing underneath the door) as well as ensures stability and longevity of the installation.

The element that should be incorporated into each door package is a subthreshold extension. It is mounted underneath the door threshold guaranteeing stable placement of the whole installation. This has a substantial influence on durability and longevity of the installation while also eliminating a heat-bridge effect where inner flooring and outer concrete slab meets. In our offer You will find such extensions made with PVC and Klinaryt (hardened expanded polystyrene).

## ADDITIONAL GLAZING: P4 ANTI-BURGLARY GLASS AND ONE-WAY MIRROR

One-way mirror glazing allows the best reflection factor from the outside while keeping the visibility from the inside. One-way mirror is available for almost every model of doors.

P4 anti-burglary glass is an option allowing for a very high resistance against burglary attempts while simultaneously keeping the visual aesthetics intact. Glazing set contains 3 glass panes, one of which (P4 glass) is actually two panes, 4 mm thick each, held together by 4 layers of foil.

## MAINTANANCE AND USAGE OF THE DOORS

In order for the INOX stainless steel elements to remain a decoration accessory, it is recommended to regularly conserve them with a cleaning agent dedicated to those types of surfaces (available in our offer). Using the recommended cleaning fluid allows to avoid discolouration and rust stains. Dirt and residue remaining for too long on the surface of stainless steel may lead to rust, corrosion or tarnishing of that surface.

Over time and due to atmospheric conditions protective foil starts vulcanising, making it harder to remove later on. Therefore, after finished installation it should be removed from doors and INOX elements. As part of maintenance doors should be washed with a soft cloth and a neutral washing agent. It will provide durability and appropriate look for long years to come. Details of maintenance can be found in the guarantee card.

# GLASS DESIGN

NEW GLASS DIMENSION

DISCOVER A NEW  
**DIMENSION OF GLASS**

**GLASS**  
DESIGN

**External doors from GLASS DESIGN collection is the newest design proposal where glazing from the outside and frames from the inside are both flush to the door leaf giving an outstanding effect.**

New technology used for GLASS DESIGN series allows to mount the glazing without the need of using a glazing frame from the outer side.

**GLASS REFLEX  
TECHNOLOGY**

Glazing used in GLASS DESIGN series have a unique one-way mirror Black of a very high reflection factor. This unique visual effect underlines the extraordinary look of the entire door.

There is a possibility of making other glazing in the passive leaf than listed (only after consultation with the sales department).

Sidelights available only with TERMO frame.

When using TERMO frame it is possible to connect with one-leaf doors, two-leaf doors and doors with passive side panels. Made with warm aluminium TERMO profile. Available in all colours. Every sidelight comes with three glass pane unit. Prices include installation kit.

There is a possibility of manufacturing sidelights and top lights in non-standard dimensions (in between those shown in table below). Cost of sidelight with non-standard dimensions varies.

**WORTH KNOWING**

It is good to choose the right sidelight as early as during design phase. It will allow to reduce installation costs.

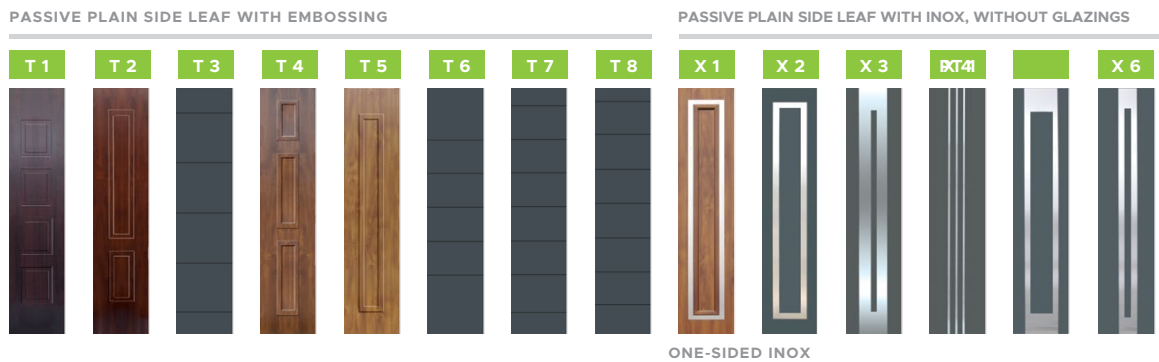

## EXTERIOR DOOR WITH PASSIVE PLAIN SIDE LEAF

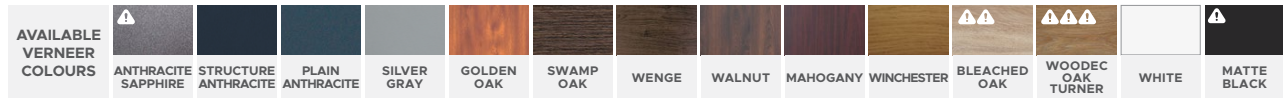

### EXPLORE OPTIONAL ACCESORIES

Doors with passive plain side leaf contain the PREMIUM series standard equipment and are always available with TERMO frames (extra charge to the TERMO frame according to the rates). Passive plain side leaf may be present on one side or both sides of main door leaf. Both TERMO door frame and passive plain side leaf frame are combined in the same way as with sidelights and transoms.

Passive plain side door leaf available in width 30, 40, 50 and 60. Availability depends on door line.

AVAILABILITY OF THE FOLLOWING WIDTHS ONLY FOR PREMIUM LINES.
